Vision and Mission of KLE Technological University

# Vision

KLE Technological University will be a national leader in Higher Education–recognised globally for innovative culture, outstanding student experience, research excellence and social impact.

# Mission

KLE Technological University is dedicated to teaching that meets highest standards of excellence, generation and application of new knowledge through research and creative endeavors.

The three-fold mission of the University is:

- To offer undergraduate and post-graduate programs with engaged and experiential learning environment enriched by high quality instruction that prepares students to succeed in their lives and professional careers.
- To enable and grow disciplinary and inter-disciplinary areas of research that build on present strengths and future opportunities aligning with areas of national strategic importance and priority.
- To actively engage in the Socio-economic development of the region by contributing our expertise, experience and leadership, to enhance competitiveness and quality of life.

As a unified community of faculty, staff and students, we work together with the spirit of collaboration and partnership to accomplish our mission.

Vision and Mission Statements of the School / Department

# Vision

The KLE Tech – Department of Biotechnology will excel and lead in education, research and innovation in Biotechnology contributing to the evolving needs of the society.

# Mission

- To provide an excellent educational experience to undergraduate students of Biotechnology through quality teaching, relevant curriculum and effective research experience that enables students to become leaders in their chosen field.
- To provide scholarly, vibrant learning and research environment that enables to achieve personal and professional development.
- To cater to the societal needs and serve the communities at local, national and international levels combined with a deep awareness of ethical responsibilities to profession and society.

# Program Educational Objectives/Program Outcomes and Program-Specific Objectives

#### **Program Educational Objectives -PEO's**

Graduates will demonstrate peer- recognized technical competency in the analysis, design and development of solutions for Molecular Biotechnology and Bioprocess Engineering.

Graduates will demonstrate leadership and initiative to advance professional and organizational goals with commitment to ethical standards of profession, teamwork and respect for diverse cultural background

Graduates will be engaged in ongoing learning and professional development through pursuing higher education, and self-study

Graduates will be committed to creative practice of engineering and other professions in a responsible manner contributing to the socio-economic development of the society

## Program Outcomes-PO's

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.

Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

Communicate effectively on complex engineering activities with the engineering community and with t h e society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and

receive clear instructions.

Demonstrate knowledge and understanding of t h e engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

# Program Specific Objectives -PSO's

Demonstrate adequate proficiency of good laboratory practices in terms of accuracy & precision, safety, ethics and reproducibility and able to follow standard operating procedures (SOP).

Demonstrate proficiency of Bioprocess Technology towards development of processes and products in global context.

Apply the knowledge of engineering & applied science to demonstrate research aptitude/skills in frontier areas of biotechnology.

ISA Marks:50	ESA Marks:50	Total Marks:100	
Teaching Hours:04	<b>Examination Duration:3 Hours</b>		

Unit I

# 1. Functions, Graphs and Models

Functions, types of functions, transformations and models (Linear, exponential, trigonometric).

07 Hours

MATLAB: Graphing functions, Domain-Range and Interpreting the models

## 2. Calculus of functions and models

Limit of a function, Infinite limits- graph, Continuity and discontinuity, Intermediate value theorem statement, Roots of the equation using Bisection Method and Newton- Raphson Method. Interpretation of derivative as a rate of change, All the rules of derivatives (List only), Maxima, Minima and optimization problems. Curvature and Radius of Curvature, Indeterminate forms, L- Hospital's rule-Examples

13 Hours

## MATLAB: optimization problems. Curvature problems

Unit II

# 3. Infinite Series

Definition, Convergence of series, Tests of convergence – p-series, Alternating series. Power series, radius of convergence, Taylor's and Maclaurin's series, Applications of Taylor's and Maclaurin's series

#### 06 Hours

#### MATLAB: Convergence of series

#### 4. Integral calculus

Tracing of standard curves in Cartesian form ,Parametric form and Polar form; Beta and gamma function, relation between them, evaluation of integrals using Beta and gamma functions; Applications to find arc length, Area, Volume and surface area (Cartesian, parametric and polar curves). Approximate integration- Trapezoidal rule, Simpson's 1/3 rule

### 14 Hours

MATLAB: problems on arc length, area, volume and surface area

#### KLE Technological University Creating Value, Leveraging Knowledge

#### Unit III

# 5. Ordinary differential equations of first order

(a) Introduction to Initial Value problems. Linear and Bernoulli's equations, Exact equations and reducible to exact form, Numerical solution to Initial Value problems-Euler's method, Modified Euler's method and Runge-Kutta method

(b) Applications of first order differential equations-Orthogonal trajectories growth and decay problems, mixture problems, Electrical circuits, falling bodies.

#### 10 Hours

MATLAB: Solve differential equations

**Text Books** 

1. Early Transcendentals Calculus- James Stewart, Thomson Books, 7ed 2010

#### **Reference Books:**

- Calculus Single and Multivariable, Hughues-Hallett Gleason, Wiley India Ed, 4ed, 2009.
- 2. Thomas Calculus, George B Thomas, Pearson India, 12ed, 2010

(Use this template for all courses, semester wise)

Program: Biotechnology		Semester: I
Course Title: Engineering Cher	mistry	Course Code:15ECHB101
L-T-P:3-0-0	Credits:03	Contact Hours:40
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:03 Examination Duration:3 Hours		
	11!	

#### Unit I

#### 1. Pure substances

Properties of pure substance (Steam), two property rule, T-H diagram, formation of steam at constant pressure. Different states of steam: Wet steam-dryness fraction, determination by separating-throttling calorimeter, Dry saturated steam, Superheated steam, thermodynamic parameters of steam, steam table, numerical problems.

T-V, P-V & P-T diagram of pure substance taking water as example. Triple point & critical point, sub-cooled point, Sub-cooled liquid, saturated liquid, mixture of saturated liquid & vapor, saturated vapor & superheated vapor states.

#### 08 Hours

# 2. Real and ideal gases

Properties of Real and Ideal gases. Vander Waal's equation, Vander Waal's constant in terms of critical properties –numerical problems. Compressibility factor, compressibility chart and Law of corresponding state. Ideal gas: equation of state, internal energy and enthalpy as functions of temperature. Ideal gas mixture: Dalton's law of additive pressures and Amagat's law of additive volumes. Terms used in the analysis of mixture of gases - numerical problems.

#### **05 Hours**

# **3.** Engineering Materials

Ferrous metals – properties and applications of Iron and Steel. Ferrous metal s – properties and applications of copper and aluminium. Cement- properties, mechanism of setting & hardening of cement and applications. Lubricants- Properties –viscosity, flash point, fire point, cloud point and pour point, mechanism- hydrodynamic and boundary lubrication and applications.

#### 03 Hours

#### Unit II

# 4. Fuel Chemistry

Fuels, classification, determination of calorific value of a fuel (solid / liquid fuel by Bomb calorimeter), coal analysis- Numerical problems. Petroleum - cracking, Octane number, Cetane number, reforming, and mechanism of knocking in Petrol and Diesel engines. Renewable energy

FMCD2009 / 2.0

#### sources - power alcohol and bio diesel.

#### 5. Energy Storage and Conversion Systems

Electrode potential, Nernst equation, Formation of a cell; Reference electrodes – Calomel electrode and Determination of electrode potential using calomel electrode, numerical problems on E,  $E_{cell,}$ ,  $E^{0}_{cell}$ .

Batteries: Classification, characteristics, Lead-acid and Li ion batteries.

Fuel cells: Methanol-O<sub>2</sub> fuel cell.

## 6. Surface Chemistry

Corrosion: Electrochemical theory of corrosion taking iron as an example; corrosion control – galvanization and tinning.

Metal Finishing: Technological importance of metal finishing, Electroplating, factors affecting nature of electrodeposit- Throwing power of plating bath solution- numerical problems. Electro lessplating – advantages over electroplating, lector less plating of copper and its applications in the manufacture of printed circuit board.

04 Hours

#### Unit III

#### 7. Polymers

Introduction, free radical mechanism of addition polymerization taking Ethylene as an example; commercial polymers - Plexi glass, polyurethane and polystyrene. Adhesives – synthesis, properties as applications of Epoxy resins; Polymer Composites - structure, properties and applications of Kevlar and carbon fiber.

#### 04 Hours

# 8. Environmental Chemistry:

Water: Sources and ill effects of water pollutants- fluoride and nitrate; Determination of total hardness of water by EDTS method – numerical problems. Sewage: Determination of biological oxygen demand by Winkler's method – numerical problems and determination of chemical oxygen demand - numerical problems,

0 Hours

06 Hours

- 4. Fontana M G, Corrosion Engineering, 3<sup>rd</sup> Edition, McGraw Hill Publications, 1986.
- 5. Billmeyer F W, Text Book of Polymer Science, John Wiley & Son's, 1994.
- 6. Principles of Polymer Chemistry- A. RavvePlelum Press, New York and London.
- 7. Callister William D, Materials Science and Engineering: An introduction, John Wiley and Sons 2007: 721 pages.

Program: Biotechnology Semester: I				
Course Title: C Programming for Pro	blem Solving	Course Code:18ECSP101		
L-T-P:0-0-3	Credits:3	Contact Hours: 6		
ISA Marks:80	ESA Marks:20	Total Marks:100		
Teaching Hours:78	Examination Duration:3 Hours			
1.Introduction to Problem solving				
Introduction to algorithms / flowchar	ts and its notations, top down des	sign, elementary problems.		
		03 Hours		
2.Basics of C programming language				
Characteristics and uses of C, Structu	re of C program, C Tokens: Keywo nut statements	rds, Identifiers, Variables, Constants,		
operators, bata types, input and out	put statements.			
		15 Hours		
<b>3.Decision control statements</b>				
Conditional branching statements:	if statement, if else statement,	, else if ladder, switch statement,		
unconditional branching statements:	break, continue.			
Introduction to Debugging Skills				
Introduction to Test Driven Programm	ning.	12 Центе		
		12 Hours		
4. Iterative statements				
while, do while, for, nested statement	ts			
10 Hours				
5 Europians				
Introduction, Function declaration, definition, call, returns statement, passing parameters to functions,				
Introduction to Coding Standards				
		10 Hours		
6 Arrays and Strings				
Introduction, Declaration, Accessing	elements, Storing values in arra	ys, Operations on one dimensional		
array, Operations on two dimensional arrays, Introduction to Code Optimization and refactoring				

# 7.Pointers

Introduction, declaring pointer, pointer variables, pointer expression and arithmetic, passing arguments to functions using pointers, pointers and arrays, passing an array to a function.

**08 Hours** 

05 Hours

### 8.Structures and Unions

Introduction, passing structures to functions, Array of structures, Unions

#### Unit I

## **Chapter 1: Overview of Electronics in Mechanical Engineering**

Definition & overview of Mechatronics, Mechatronics and Design Innovation, Mechatronics and Manufacturing, Mechatronics and Education; Typical Mechatronics Components; Sensors and Transducers.

#### 03 Hours

## **Chapter 2: Semiconductor Devices and Applications:**

PN junction diode, characteristics and parameters, diode approximations, half wave rectifier, full wave bridge rectifier capacitor filter, Zener diode, Voltage regulator design, BJT, Darlington Pair, JFET, MOSFET, UJT, SCR.

#### 10 Hours

#### **Chapter 3: Operational Amplifiers:**

Ideal op-amp characteristics, op-amp applications: Comparator, Inverting amplifier, Noninverting amplifier, Voltage follower, Integration, Differentiation, Adder, Subtractor and numerical as applicable.

08 Hours

### KLE Technological University Creating Value, Leveraging Knowledge

Unit II

# Chapter 4: Digital Logic:

Digital Number system: Binary & Hexadecimal number systems, Conversion, BCD Number system, Gray code, Data word representation, Binary Arithmetic, Boolean Algebra, Logic gates, Combinational & Sequential circuits, Adders, Flip-Flops, Registers, Counters, Multiplexer.

# Introduction to Digital Electronics (Text-2):

Introduction, Switching and Logic Levels using circuits, Digital Waveform (Sections 9.1to 9.3).Number system: Binary, Octal Decimal and Hexadecimal, Inter Conversion, BCD Number system, Gray code, Data word representation, Binary Arithmetic, Boolean Algebra: Laws, rules & theorems of Boolean algebra, Sum of products form (SOP), products of sum form (POS) of Boolean functions. Study of Karnaugh Maps (K-maps) for 2, 3 & 4 variables only. Logic gates, Adders, Encoder, Decoder, Multiplexer and Demultiplexer. Combinational & Sequential circuits, Latches and Flip-Flops(SR, JK, D, T),

## 13 Hours

# Chapter 5: Sensors and Transducers :

Introduction, Classification of sensors and transducers, Contact type – Mechanical switches, Non-contact type - proximity sensors & Hall sensors, principle of working of light sensors, Future Challenges.

#### 06 Hours

#### Unit III

# Chapter 6: Signal Conditioning:

Analog & Digital signals, Digital to Analog Conversion, R-2R DAC, Analog to Digital Conversion, SAR ADC, Data Acquisition.

#### 06 Hours

# Chapter 7: Case Studies of Mechatronic Systems:

Automatic Camera, Drilling Machine, Bar code reader.

#### 06 Hours

#### Unit I

#### **Chapter 1:Concept of Motion - Kinematics in One Dimension**

Introduction, Motion Diagrams, The Particle Model, Position Model, Linear Velocity and Acceleration, Uniform Motion, Instantaneous Velocity, Finding Position from Velocity, Motion with Constant Acceleration, Free Fall Motion on an Inclined Plan, Instantaneous Acceleration, Numerical.

#### 06 Hours

#### **Chapter 2:Kinematics in Two Dimensions**

Introduction to Vectors, Properties of vectors, Coordinate Systems and Vector Components, Vector Algebra. Position, velocity and Acceleration vectors, Projectile Motion, Relative Motion, Uniform Circular Motion, Velocity and Acceleration in Uniform Circular Motion, Nonuniform Circular Motion and Angular Acceleration, Numerical.

#### 06 Hours

#### **Chapter 3:Force and Motion**

Concept of Force, Identifying Forces, A Virtual Experiment,

Newton's First Law, Newton's Second Law, Free-Body Diagrams, Applications.

#### **Chapter 4:Dynamics I**

Equilibrium using Newton's second Law, Friction, Drag,

Newton's Third Law, Analyzing Interacting Objects, Newton's Third Law, Applications.

#### Chapter 5: Dynamics II

Motion in a plane, Dynamics in Two Dimension, Velocity and Acceleration in Uniform Circular Motion, Dynamics of Uniform Circular Motion, Fictitious Forces, Non-uniform Circular Motion, Numerical.

#### **Chapter 6:Impulse and Momentum**

Momentum and Impulse, Problems, Conservation of Momentum, Inelastic Collisions, Explosion, Momentum in Two Dimension, Numericals.

#### 05 Hours

#### Unit III

#### Chapter 7: Energy and Work

Energy: Kinetic Energy and Gravitational Potential Energy, Restoring Forces, Hooke's Law, Elastic Potential Energy, Elastic Collisions, Energy Diagrams,

Work: Work and Kinetic Energy, Force, Work and Potential energy, Conservation of Energy, Power, Numericals.

#### **08 Hours**

Unit I

#### **Chapter 1: Overview of Civil Engineering**

**Evolution of Civil Engineering** 

Specialization, scope and role.

#### Impact of Civil Engineering on

National economy, environment and social & cultural fabric.

#### **Challenges and Opportunities for Civil Engineers**

Civil Engineering Marvels, Future challenges, Higher education and Research.

#### 04 Hours

#### Chapter 2: Coplanar concurrent force system

#### Introduction to Engineering Mechanics:

Basic idealizations – Particle, Continuum, Body, Rigid body, Deformable body, Definition of force and its elements; Laws of Mechanics – Parallelogram law of forces, Principle of transmissibility, Law of Superposition, Newton's laws of motion. Classification of force systems

#### 03 Hours

**Resultant of coplanar concurrent force system:** Definitions – Resultant, composition & Resolution of a force, Equilibrium, Equilibrant, Formulae for resultant of forces and resolution of a force. Numerical problems on resultant of forces.

#### 04 Hours

#### Equilibrium of coplanar concurrent force system:

Conditions of equilibrium, Action & Reaction, Free body diagram, Lamis' theorem. Numerical problems on equilibrium of forces.

#### Chapter 3:Coplanar non-concurrent force system

**Resultant of a force system:** Moment, moment of a force, couple, moment of a couple, Characteristics of couple, Equivalent force-couple system, Numerical problems on moment of forces and couples, on equivalent force-couple system. Varignons principle of moments, Resultant of coplanar- non-concurrent force systems and numerical problems.5 hrs.

KLE Technological University Creating Value, Leveraging Knowledge

**05 Hours** 

#### Unit II

#### Chapter 4: Equilibrium of a force system (Chapter 3 contd..)

Conditions of equilibrium, types of support and loading for a statically determinate beam, Reactions at support connections, Numerical problems on equilibrium of force systems and support reactions for a statically determinate beam.

05 Hours.

#### **Chapter 5:Static Friction**

Introduction, types of friction, definition, limiting friction, coeffilSAnt of friction, laws of Coulomb friction, angle of friction and angle of repose, cone of friction. Wedge and belt friction theory. Derivation of belt friction formula. Numerical problems on, impending motion on horizontal and inclined planes (including connected bodies); wedge friction; Ladder friction and Belt friction.

#### 08 Hours.

#### **Chapter 6: Centroid of Plane Figures**

Introduction, Definition, Methods of determining the centroid, axis of reference, axis of symmetry, Locating the centroid of simple plane figures (triangle, semicircle, quarter of a circle and sector of a circle etc,.) using method of integration, Numerical problems on Centroid of simple built up sections.

#### Unit III

#### Chapter 7: Second moment of area (Plane figures)

Introduction, Definition, Method of determining the second moment of area, Section Modulus, Radius of gyration, perpendicular and Parallel axis theorems, Polar second moment of area, second moment of area of simple plane figures (triangle, rectangle, semicircle, circle etc,.) using method of integration, Numerical problems on MI of simple built up sections.

05 Hours

#### Chapter 8: Kinetics of a particle- Work, Power, Energy

Introduction – Kinematics and Kinetics, Definitions – work, power and energy. Work done by a force (constant, gravitational and spring forces) in rectilinear motion. Numerical problems, Kinetic energy of a particle, principle of work and energy.

06 Hours.

Unit I			

Chapter 01: Introduction to engineering drawing and orthographic projections. (Manual Drafting)

- i. Introduction to engineering drawing BIS conventions.
- ii. Orthographic projections: first angle projection and third angle projection symbolic representation.
- iii. Projections of points.
- iv. Projections of lines inclined to both the planes and determination of true length by rotating the view method (Problems on traces of a line and mid-point problems are not included). However application problems are included.
- v. Projection of planes: Planes parallel to one plane and perpendicular to other plane or perpendicular to one plane and inclined to other plane (Two stage problems).
- vi. Projection of simple solids such as prisms, pyramids, cylinders, cones and sphere and their frustums in simple positions (Base parallel to or in one of the three planes).

#### **08 Hours**

#### Chapter 02: Development of lateral surfaces of solids. (MANUAL)

- i. Development of lateral surface of prisms and cylinders (Either full or truncated using parallel line development method)
- ii. Development of lateral surface of pyramids and cones (Either full or truncated or of their frustums using radial line development method)
- iii. Development of lateral surfaces of spheres using both the methods and development of transition pieces.

07 Hours

# Chapter 03: Conversion of pictorial views into orthographic projections using CAD software.

Drawing orthographic projection of objects shown in pictorial views by first angle method of projection using CAD software. (2D drafting only)

**Chapter 04: Isometric projection or view using CAD software.** Drawing isometric projections or views of objects shown in orthographic projections using CAD software.

04 Hours

#### Text Books:

- 1. Text Book of Engineering Drawing by K R Gopalakrishna
- 2. Text Book of Engineering Drawing by N D Bhatt and V M Panchal

### 5. Power Electronics (Text1, chapter 45)

Introductory, Thyristor, Some thyristor circuits, Limitations to thyristor operation, The thyristor in practice, The fully controlled AC/DC converter, AC/DC inversion, Switching devices in inverters, Three-phase rectifier networks, The three-phase fully controlled converter, Inverter-fed induction motors, Soft-starting induction motors, DC to DC conversion switchedmode power

## 06 Hours

# Unit-I

Specialization, scope & role, impact of Electrical Engineering on national economy, environment, Sources of generation, sustainability, challenges and opportunities for electrical engineers, electrical engineering marvels, future challenges.

## 2.DC Circuits

**Program: Biotechnology** 

Course Title: Basic Electrical Engineering

Voltage and current sources, Kirchoff's current and voltage laws, loop and nodal analysis of simple circuits with dc excitation. Time-domain analysis of first-order RL and RC circuits.

#### 3.AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase series and parallel R-L-C ac circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections. power measurement using two watt meters

Unit II

Electromagnetic principles, Solenoid, Relays, classification of Electric motors, DC motors-shunt,

**4.Electrical Actuators** 

various applications.

Program: Biotechnology			Semester: II	
Course Title: Engineering Physics lab			Course Code:16EPHP102	
L-T-P:0-0-1		Credits:1	Contact Hours: 2	
ISA Marks:80		ESA Marks:20	Total Marks:100	
Teaching Hours:24 Hours		Examination Duration:3 Hours		
List of Experiments				
1	Experimental Data Error Analysis			
2	Coefficient of Friction			
3	Centripetal Force			
4	Young's Modulus by Searle's method			
5	The Law of Forces by three wire suspension table			
6	Force Table and Vector addition of forces			
7	Moment of inertia and rotational motion			
8	Projectile motion			
9	Variable g pendulum			
10	Study of one dimension mot	ion by linear air track		

# Course Title: Numerical Methods and Differential Course Code:20EMAB205 Equations Credits:4.0 Contact Hours:4 ISA Marks:50 ESA Marks:50 Total Marks:100 Teaching Hours:40 Examination Duration: 3 Hours Unit I 1. Interpolation techniques Interpolation techniques Interpolation techniques

Semester: III

Finite differences, Forward, Backward and central difference Operators. Newton Gregory forward and backward interpolation formulae. Stirling's formula for central difference. Newton's divided difference formula for unequal intervals.

### 08 Hours

#### 2. Numerical Solution of Partial Differential Equations

Introduction, Classification of PDE, Parabolic, Elliptic and Hyperbolic Partial differential equations, Introduction to finite difference approximations to derivatives, finite difference solution of parabolic PDE, explicit and implicit methods, finite difference method to Elliptic PDE-initial –boundary vale problems, Hyperbolic PDE-explicit method. Engineering problems: Temperature distribution in a heated plate, steady-state heat flow and vibration of a stretched string.

#### 12 Hours

#### Unit II

#### 3. Matrices and System of linear equations

Introduction to system of linear equations, Elementary row transformations, Rank of a matrix, Consistency of system of linear equations, solution of system by (i) Direct methods-Gauss elimination, Gauss Jordon method (ii) Iterative method - Gauss-Seidel method. Eigen values and Eigenvectors of a matrix. Largest Eigen value and the corresponding Eigenvector by power method. Engineering problems.

#### 08 Hours

#### 4. Introduction to Statistics

**Program: Biotechnology** 

Introduction, Scope of biostatistics, Variables, Measurement scales, Ordered array, Graphical representation of data: Bar Chart, Line chart, histogram, frequency curve, Ogive curves. Descriptive statistics: Measure of central tendency (arithmetic mean, median, mode, quartiles); Measures of dispersion (Quartile deviation, Standard deviation, coefficient of variation), Measure of skewness (Pearson and Bowley's)

#### KLE Technological University Creating Value, Leveraging Knowledge

Unit III

#### 5. Introduction to Laplace transform and Solution of Differential Equations

Definition, transforms of elementary functions- transforms of derivatives and integrals-Properties. Periodic functions, Unit step functions and Unit impulse functions. Inverse Transforms- properties- Convolution Theorem. Applications to differential equations

10 Hours

#### Text Books:

- 1. Numerical methods for Engineers, Chapra S C and Canale R P, 5ed, TATA McGraw-Hill, 2007
- Advanced Engineering Methods, Kreyszig E. 8Ed, John Wiley & sons, 2003. Applied Statistics and Probability for Engineers, Douglas Montgomery, George Runger, 6Ed, John Wiley, 2014

#### **Reference Books:**

- 1. Introduction to Probability and Statistics: Principles and Applications for Engineering and Computing, J.Susan Milton, Jesse C Arnold, , 4, TATA Mc-Graw Hill Edition, 2007
- 2. Fundamentals of Mathematical Statistics, Gupta S.C and Kapoor V.K, 11Ed, Sultan Chand & Sons, New Delhi, 2002
- 3. Higher Engineering Mathematics, Grewal B S, 38ed, Khanna Publication, New Delhi, 2001.

Program: Biotechnology		Semester: III	
Course Title: Microbiology		Course Code: 15EBTC201	
L-T-P:4-0-0	Credits:4.0	Contact Hours:04	
ISA Marks:50	ESA Marks:50	Total Marks:100	
Teaching Hours:50	<b>Examination Duration: 3 Hours</b>		
Unit I			

#### 1. Introduction

The scope of Microbiology, Historical Foundations, Taxonomy and classification of microorganisms, Bergey's Manual of Systematic Bacteriology, prokaryotic and eukaryotic cells, Eubacteria and Archaebacteria, study of different types of microorganisms: bacteria, yeasts, viruses, fungi, protozoa (structure, classification, modes of reproduction & growth). Microbes and human society: Microbial applications in agriculture, veterinary, healthcare, industry and environment.

#### 05 Hours

#### 2. Functional anatomy of Prokaryotic and Eukaryotic cells:

Size, shape and arrangement of bacterial cells, structures external to cell wall, cell wall and structures internal to cell wall including endospores. Structure and functions of eukaryotic cell. Genome structure in prokaryotic and Eukaryotic cells, Genotype & Phenotype, Genetic transfer and recombination (Transformation, Conjugation & Transduction), Genes and evolution.

#### 07 Hours

#### 3. Microscopic Examination

Bright-field Microscopy, Dark-field Microscopy, Phase-contrast Microscopy, Fluorescence Microscopy and Electron Microscopy. Preparation of specimen for light and electron microscopy. Advances in Scanned Probe Microscopy, Scanning Tunneling Microscopy, Atomic Force Microscopy.

#### 04 Hours

#### 4. Microbial Growth

The requirements for growth (Physical & Chemical requirements), Culture media & their classification, Effect of different factors on growth, Growth of bacterial culture: bacterial division, generation time, phases of growth. Fundamentals of microbial growth Kinetics.Chemostat & Turbidostat, Measurement of growth: Direct and Indirect methods.

#### KLE Technological University Creating Value, Leveraging Knowledge

Unit II

#### 5. Microbial Techniques

Pure culture techniques (streak plate, spread plate, pour plate), Staining techniques (simple and differential staining techniques), Enumeration techniques (Direct Microscopic Count, plating techniques, membrane filtration, Electronic enumeration, etc). Characterization: Phenotypic and Biochemical characterization. 16S rRNA gene homology.

#### 10 Hours

#### 6. Microbial Metabolism

Catabolic and Anabolic reactions, Energy production, Carbohydrate catabolism: Glycolysis, Alternatives to Glycolysis, Cellular respiration, Energy production by aerobic process, Energy production by anaerobic process, Energy production by photosynthesis, Mechanism of ATP synthesis. Lipid and Protein catabolism, Photosynthesis: Light dependent and light independent reactions. Metabolic diversity among microorganisms: autotrophs and heterotrophs. Metabolic pathways of energy use: Polysaccharide biosynthesis, lipid biosynthesis, amino acid and protein biosynthesis. The integration of metabolism. Utilization of Energy and Biosynthesis: Utilization of energy for biosynthetic and non-biosynthetic processes.

#### 10 Hours

#### Unit III

#### 7. Control & Preservation of Microorganisms

Control of microorganisms by physical methods (heat, filtration, radiation). Microbial death kinetics, Thermal death point, Thermal death time, Decimal reduction time. Control of microorganisms by chemical methods (phenols, alcohols, halogens, dyes, detergents, heavy metals, etc), Common preservation techniques for microbes.

#### 05 Hours

#### 8. Applied and Industrial Microbiology

Food Microbiology, role of microorganisms in food production, Industrial Microbiology: Introduction to Fermenter & fermentation processes, Media for industrial application, Industrial Products: amino acids, vitamins, enzymes, pharmaceuticals, organic acids (discussion of case study), r-DNA technology & therapeutic products from microbes. Biosynthetic pathways and Introduction to Metabolic Engineering.

#### Text Books:

- 1. Chan & Pelzar, Microbiology, Publisher: Tata McGraw Hill 5<sup>th</sup> Edition 2008.
- 2. Tortora, Microbiology: An Introduction, Publisher: Pearson Education, 8<sup>th</sup> Edition, 2004 **Reference Books:** 
  - 1. Stanier Ingraham & Wheeler, General Microbiology, Pub: Mac Millan 5<sup>th</sup> edition. 2007.
  - 2. Heritage, Introductory Microbiology Pub: Cambridge, 1<sup>st</sup> edition, 2007

#### 4. Nucleic acids

bond, Biologically important peptides. Proteins – Classification- primary, secondary- Alpha helix, Beta sheets, tertiary and quaternary proteins-hemoglobin. Ramachandran plot, polypeptide sequencing- Edman degradation, Chemical synthesis of Peptides. 05 Hours

Structure and properties of purines, pyrimidines, nucleosides and nucleotides. Nucleic acids-

# 3. Amino acids and Proteins Definition, Classification and properties of amino acids, reactions, rare amino acids, essential and nonessential amino acids with physiological importance. Peptides - Definition of peptide

classification and properties of fatty acids, Essential and non-essential fatty acid with physiological importance. Structure and physiogical functions of phospholipids, Sphingolipids, cerebrosides and gangliosides. Steroids- Structure and functions of cholesterol,. Eicosanoids, lipoproteins and terpenes. Vitamins-classifications and functions 05 Hours

Definition and classification of lipid - simple, compound and derived lipids. Structure,

#### 1. Biochemical Foundation & Carbohydrates

**Program: Biotechnology** 

L-T-P:4-0-0

ISA Marks:50

**Teaching Hours:50** 

**Course Title: Biochemistry** 

Types of chemical reactions, Solution chemistry. pH (Henderson-hesselbatch equation) Buffers and their Biological importance, carbohydrates- chemical structure and properties classification- Monosaccharide's, Disaccharides, Sugar derivatives, deoxy sugars, amino sugars, and sugar acids, phosphorylated sugars, structure and properties of polysaccharides, Heteropolysaccharides -Homopolysaccharides, Peptidoglycan, Glycosaminoglycans,

**Examination Duration: 3 Hours** Unit I

Glycoconjugates, Glycobiology . Biological importance of carbohydrates. 07 Hours 2. Lipids

#### 5. Carbohydrate metabolism

Structure of DNA, RNA -Types,

Glycolysis-aerobic and in anaerobic pathway, Energy yield of glycolysis Regulation of glycolysismetabolic and hormonal. Fates of pyruvate. Glycogen - synthesis and degradation. Regulation

Unit II

03 Hours

# KLE Technological University Creating Value, Leveraging Knowledge

Credits:4.0

ESA Marks:50

Semester: III

**Contact Hours:04** 

Total Marks:100

Course Code: 15EBTC202

#### 6. Metabolism of Amino acids

exopolysaccharides.

General reactions of amino acid metabolism, urea cycle, amino acid biosynthesis-aspartate and glutamate family and degradation of aromatic amino acid - phenylalanine and tyrosine, metabolic disorders of amino acid metabolism, biosynthesis of plant substances and neurotransmitters, Environmental and Industrial Significance of Amino acid metabolism.

#### 7. Metabolism of Fatty acids

Fatty acid oxidation, biosynthesis of fatty acids, Ketone bodies, phospholipids and spingolipids cholesterol biosynthesis, Regulation, metabolic disorders of lipid metabolism. Environmental and Industrial Significance of lipid metabolism

#### 8. Metabolism of Nucleic acids

Biosynthesis and degradation of purines and pyrimidines, salvage pathway, uric acid production, regulation, metabolic disorders of nucleic acid metabolism.

Unit III

#### 9. Biological Membranes And Transport Mechanism

Composition and functions of biological membranes (fluid mosaic model) – Proteins, Carbohydrates, Glycoprotein and glycolipids, Membrane transport - Passive transport and Active transport. Mechanism of Na+ and K+, glucose and amino acid transport. Role of transport in signal transduction processes.

#### Text Books

- David L. Nelson, Michael M. Cox, Lehninger Principles of Biochemistry, Sixth Edition, W.H. Freeman, 2012.
- 2. Jeremy M. Berg, John L. Tymoczko, Lubert Stryer. , Biochemistry, 7th revised International edition, Palgrave MacMillan, 2011.

05 Hours

#### 05 Hours

05 Hours

#### 60

of glycogen metabolism. Gluconeogenesis, Pentose phosphate pathway. Significance of pentose phosphate pathway and regulation. Production of Acetyl-CoA, Reactions of Citric acid cycle, Anaplerotic reactions, regulation of citric acid cycle. Glyoxylate cycle, Electron transport chain, ATP synthesis, shuttle systems and Oxidative phosphorylation. Cyclic and Non-cyclic Photophosphorylation and Calvin Cycle (C3) in plants Disorders of carbohydrate metabolism. Production of microbial polysaccharides; industrial and Medical application of

#### **Reference Books**

- 1. Donald Voet and Judith G. Voet. , Biochemistry, 4th edition, Wiley; , 2010
- 2. Geoffrey L. Zubay, Principles of Biochemistry , Edition: 4th, William C Brown Pub, 1999.

#### **Program: Biotechnology** Semester: III **Course Title: Bioprocess Calculations** Course Code: 15EBTF201 L-T-P:4-0-0 Credits:4.0 **Contact Hours:04** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:50 Examination Duration: 3 Hours** Unit I

#### 1.Units and dimensions

Introduction to Fundamental and derived Units. FPS, MKS, CGS and SI system. Conversion from one system to another system with examples.

#### 2.Basics of chemical calculation

Introduction, concept of mole, Atomic mass and molar mass, composition of mixtures of solids, liquids and gaseous. Ideal gas law, Amagats law and Dalton's law. Varification of Vol %=Mol %. Physical properties of solution, normality, morality and molality. Solving problems for normality, morality and molality.

#### 3. Material balances without chemical reaction

General material balance equation, simplification for steady state without chemical reaction. Material balances of unsteady-state operation. Problems on mixing of streams, Distillation, Drying, Absorption, evaporation, Filtration, Extraction & Crystallization.

#### **08 Hours**

**08 Hours** 

04 Hours

#### Unit II

#### 4. Material balances with chemical reaction

Introduction, Concept of limiting, excess reactant and inerts. Conversion, yield and selectivity. Fuels and combustion-Definition of ultimate and proximate analysis of coal, air fuel ratio calculation. Problems.

**10 Hours** 

#### 5. Energy Balance

General steady state energy balance Equation. Thermopysics-Enthalpy, Heat capacities of solids, liquids and gases. Heat capacities of mixture, Thermo chemistry-Heat of combustion, formation and reaction. Effect of temperature on heat of reaction. Definition and significances of NCV and GCV and problems.

#### KLE Technological University Creating Value, Leveraging Knowledge

#### 10 Hours

#### Unit III

#### 6a .Stoichiometry of microbial growth and product formation kinetics

Introduction and definition of various yield coeffilSAnts. Elemental balances and Degree of reduction. Problems.

05 Hours

#### 6b .Stoichiometry of microbial growth and product formation kinetics

Introduction and Basic cell kinetic models, Strutured, unstructured and mixed growth kinetic models

05 Hours

#### Text Books

- 1. B.I Bhatt and S.M.Vora, Stoichiometry, Tata McGraw Hill publications, 4<sup>th</sup> edn, 2007.
- 2. David Himmelblau, Basic principles and calculation in chemical engineering, Pearson Education Limited,6<sup>th</sup> edn,2005

#### **Reference Books**

in Chromatography.

**Program: Biotechnology** Semester: III Course Title: Unit Operations-I Course Code: 17EBTF201 L-T-P:: 3-0-0 Credits:3.0 **Contact Hours: 03** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:40 Examination Duration: 3 Hours** Unit I

#### 1. Basics of mass transfer

Introduction to Mass Transfer, Classification of mass transfer operations, Diffusion, Fick's law of diffusion, Vapour Liquid Equilibrium (Txy & xy plots), Raoult's law, Relative volatility and its importance. Prediction of VLE data for binary mixture (Ideal system).

#### 2. Distillation

Types of distillation: simple/Batch distillation, Multi stage tray tower distillation, Packed column distillation & steam distillation. Determination of theoretical stages in multistage tray tower distillation column: Construction of equilibrium curve, Equations for operating lines of rectifying section & stripping section, Equation for feed line (q-line).Concept of Reflux ratio, Types of Refluxes: Total reflux, Minimum reflux & Optimum reflux. Conceptual numerical Problems on determination of number of theoretical stages.

#### **10 Hours**

05 Hours

#### Unit II

#### 3. Drying & Crystillation:

Importance of Drying, Terminologies and definitions, Drying rate curves under constant drying conditions, Drying Equipments: Tray dryer, Freeze dryer/Lyophilizer, spray dryer etc. Crystallization: Concept of Crystlallation, Principle and Applications

#### 05 Hours

#### 4. Extraction

5. Adsorption

Introduction, Liquid-Liquid & Solid-Liquid Extraction Principles, selection of solvents. Batch and Continuous Extraction. Extraction Processes: Aqueous two phase Extraction, Super critical Fluid extraction.

Concept of Adsorption, Types of Adsorption, Adsorption Isotherms, Applications of Adsorption

#### 04 Hours

#### 6. Heat transfer

Heat transfer: Introduction, Modes of heat transfer: conduction, convection and radiation. Conduction: Fourior's law of heat conduction, Thermal conductivity. Steady state heat conduction through unilayer and multilayer plain wall, Unilayer & multilayer Cylindrical pipe. Conceptual problems.

04 Hours

#### Unit III

#### 7. Convective heat transfer & Heat transfer equipment's

Forced and natural convection, individual and overall heat transfer coeffilSAnt, Correlation for h and U for the flow in circular tubes and annulus. Calculation of h (film heat transfer coeffilSAnt) based on dimensionless number, Concept of Log Mean Temperature Difference (LMTD). Typical heat transfer equipments: Double pipe heat exchanger, Shell and tube heat exchanger. (Line diagram and operation).

#### 05 Hours

#### 8. Condensation & Boiling

Condensation: Drop wise & Film wise condensation. Boiling: Phenomenon, different regimes of Boiling (descriptive only). Insulation, Critical thickness of Insulation.

05 Hours

Unit I

#### 1. Immune system

History and Scope of Immunology and Immune system, Classification of Immune system, Types of Immune responses, Molecules ,Cells and Organs of Immune system and Anatomy of immune response.

## 06 Hours

#### 2. Humoral Immunity

Overview of Humoral immunity, B- Lymphocytes – Development and their activation, Antibody response, Structure and functions of Immunoglobulins, Classes and sub-classes of immunoglobulins, genetic control of antibody production, Monoclonal and Polyclonal antibodies, Production of Monoclonal antibodies and quality screening processes in large scale monoclonal antibody production

#### 05 Hours

#### 3. Cell Mediated Immunity

Overview of cell mediated immunity and its significance, T-Lymphocytes – Development, Types and their activation, Major Histocompatibility (MHC) Complex, Antigen Presenting Cells (APC) and antigen processing and presentation, Mechanism of Phagocytosis- Oxygen dependent and Oxygen independent.

04 Hours

#### Unit II

#### 4. Regulation of Immune Response and Immune tolerance

Immune response – Nature and necessity of its regulation, Complement System- Types, activation and types and their biological applications, Cytokines – types and their role in immune response, Immune Tolerance and their types, Hypersensitivity reactions – Types and Treatments. Food allergy, Case study on mechanism of immunity booster.

05 Hours

#### 5. Immunological disorders

Auto immune disorders – Features, important types and Experimental models of auto immune diseases ImmunodefilSAncy Disorders – Types and features. 04 Hours

$\mathcal{O}$	KLE	Tech	10]	logi	cal
KLE TECH	Univ	ersitv	Creat	ing Value,	

#### 6. Transplantation immunology

Transplantation antigens – Types and functions, Types of Transplantations, Immunological basis of Graft rejection, and their disease association, Role of HLA in graft rejection, Tumor specific antigens, Tissue typing, Immune suppression and immune suppressive drugs.

Unit III

# 7. Molecular Immunology

Vaccines – Types and their development, Production of Recombinant DNA vaccines, Application of PCR technology to produce antibodies, Immune Therapy with genetically engineered antibodies, Catalytic antibodies, immunotherapeutic applications of hematopoietic stem cells, Purification and preparation of antigens in vaccine development and Immunoinformatics.

Immunization and Antiserum, Antigen-Antibody interactions – Precipitation reactions and Agglutination reactions Immuno-electrophoresis and Immunoflurescence assay, Principle and applications of ELISA and RIA and Western blotting analysis.

	Unit I	

### **1. Introduction to enzymes**

History, nomenclature, classification of enzymes, sources of enzymes, properties of enzyme, Types of specificities, mechanism of enzyme action-Lock and Key model and Induced fit model, Enzyme catalysis -Acid base catalysis, covalent catalysis, metal ion catalysis, Proximity and orientation effects. Mechanism of coenzymes (NAD/NADP,FAD/FADH<sub>2</sub>,PLP, Coenzyme A, TPP, Biotin)

### 07 Hours

### 2. Purification of enzymes

Objectives and strategies in enzyme purification, choice of source-plant, animal and microbial, purification of intracellular and extracellular enzymes (Comprehensive flow sheet for enzyme purification), methods of homogenization, methods of separation-Enzyme fractionation by precipitation (using Temperature, salt, solvent, pH, etc.), liquid-liquid extraction, ionic exchange, gel chromatography, affinity chromatography and other special purification methods., Methods of characterization of enzymes; Analysis of yield, purity and activity of enzymes. Molecular weight determination-SDS-PAGE, MALDI-TOF

### **08 Hours**

### **3.** Enzymatic techniques

Enzyme assay, Enzyme and isoenzyme measurement methods with examples(fixed incubation and kinetic methods) Methods for investigating the kinetics of Enzyme catalyzed reactions-Initial velocity studies, rapid-reaction techniques, Standardization and optimization methods, stability and activity of enzymes

**05 Hours** 

### Unit II

### 4. Enzyme Kinetics and Enzyme Inhibitions.

Kinetics of single substrate reactions; Derivation of Michaelis -Menten equation, turnover number; K<sub>cat</sub> value, determination of Km and Vmax, Line Weaver Burk plot, Eadie Hofstee plot, Hanes woolf plot, Importance of Km & Vmax; Enzyme inhibitions- reversible, competitive, uncompetitive and non-competitive inhibitions and kinetics, allosteric and irreversible inhibition. Substrate inhibitions, Multi-substrate reactions-ordered mechanisms, random

mechanisms, Ping-pong mechanism. Allosteric enzymes and regulation - The Monad - Changeux - Wyman model (MCW) and The Koshland - Nemethy - Filmer (KNF) model, Feedback regulation and covalent regulation.

5. Enzymes Of Medical Importance

Acetylcholinesterase, angiotensin converting enzyme (ACE), ACE Inhibitors, HMG Co A reductase inhibitors, pseudocholinesterase, 5'-nucleotidase (5NT), glucose-6-phosphate dehydrogenase (GPD), CKisoforms, immunoreactive trypsinogen (IRT) and chymotrypsin; amylase isoenzymes.Importance of enzymes in diagnostics, Enzyme pattern in diseases like Myocardial infarctions, (SGOT, SGPT & LDH). Isoenzymes (CK, LD, ALP). Enzymes in immunoassay techniques, Therapeutic enzymes.

### 6. Enzyme Immobilization

Techniques of enzyme immobilization, adsorption - matrix entrapment- encapsulation- crosslinking - covalent binding - examples; whole cell immobilization and their application, kinetics of immobilized enzymes, effect of solute, partition & diffusion on the kinetics of immobilized enzymes, uses of immobilized enzymes, Design of Immobilized Enzyme Reactors- Stirred tank reactors(STR), Continuous Flow Stirred Tank Reactors (CSTR), Packed- bed reactors (PBR), Fluidized-bed Reactors (FBR); Membrane reactor

06 Hours

Program: Biotechnology		Semester: IV	
Course Title: Cell and M	olecular Biology	Course Code: 15EBTC205	
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 04	
ISA Marks:50	ESA Marks:50	Total Marks:100	
Teaching Hours:50	<b>Examination Duration: 3 Hours</b>		
114141			

Unit I

### 1. Cell Biology and Biotechnology

Organization of Prokaryotic and Eukaryotic cells. Structure and functions of membranes, nucleus, endoplasmic reticulum, Golgi complex, mitochondria, chloroplast and vacuoles. Cell division, Cell Cycle regulation and Cancer. Applications of cell biology and its principles in Genetic Engineering and Microbial, Plant & Animal Biotechnology

### 05 Hours

### 2. Molecular Biology and Nucleic Acids

Development and scope of Molecular Biology, Central Dogma of Molecular Biology and its updated view, Classical experiments and Nucleic acids as genetic material, Overview of Genome: Viral genome, bacterial genome, Mitochondrial genome, Eukaryotic genome. Organization of Prokaryotic and Eukaryotic genome/Chromosomes. Typical Gene structure in Prokaryotes and Eukaryotes. Structure and forms of nucleic acids, factors determine the structure of DNA. Denaturation and melting curves. Overview of Isolation, Purification, Estimation and Storage of Nucleic acids.

### 10 Hours

### 3. Replication of DNA

An overview and Basic rules for DNA Replication, Enzymes and proteins of DNA Replication, DNA Replication is Semi conservative, Origin of DNA Replication, Replicon and Replication fork, Unidirectional and Bidirectional replication of DNA, Mechanism of DNA replication in prokaryotes and in Eukaryotes.

05 Hours

### Unit II

### 4. Transcription

General features of Transcription process, Types of RNA molecules, Prokaryotic and eukaryotic RNA polymerases, Promoter structure and Mechanism of transcription in prokaryotes and eukaryotes, Post transcriptional modifications of mRNA, tRNA and rRNA, Transcription inhibitors. **05 Hours** 

### KLE Technological University Creating Value, Leveraging Knowledge

### 5. Translation

Features of Genetic code and Wobble hypothesis, Overview of protein synthesis, Components required for protein synthesis, Mechanism of protein synthesis in prokaryotes and eukaryotes, Post-translational modifications and Protein targeting, Inhibitors in translation

### 04 Hours

### 6. Regulation of Gene Expression in Prokaryotes and Eukaryotes.

Regulation of gene activity, Gene regulation in Prokaryotes: Constitutive, Inducible and repressible gene expression systems, Operon model for gene expression regulation in prokaryotes, Positive and Negative regulation of – Lac Operon – Regulation, Catabolic repression and Gratuitous inducers etc, Trp Operon and Gal Operon. Gene regulation in Eukaryotes, Regulation of Gene expression at Genome level, Transcriptional level – Acetylation of Histones, Chromatin remodeling, DNA Methylation, DNA elements, Transcription factors, Insulators, Regulatory proteins and Hormones. Gene regulation at Post transcriptional level – Splicing, RNA interference, Transport of mRNA and by regulating mRNA stability.

### 07 Hours

### 7. Mutations and DNA Repair

Mutation – Source of genetic variability, basic features of Mutation process, Molecular basis of Mutation, Conditional lethal mutations as a powerful tool for genetic studies and Ames test of Mutagenecity testing. DNA damage and different types of DNA repair systems and Human diseases.

### 04 Hours

### Unit III

### 8. Polymerase Chain Reaction

Principle of polymerase chain reaction (PCR) - Components of PCR reaction and optimization of PCR. Primer design and types of PCR– Inverse PCR, Hot-start PCR, Loop mediated PCR -, Reverse transcription PCR and Real time PCR. Chemistry of primer synthesis.

05 Hours

### 9. Analysis of Gene Expression

Analyzing Transcription – Northern Blots, RNase protection assay, Reverse Transcription (RT) PCR and Primer extension assay. Transcriptome Analysis – Differential screening and Array based methods. Promoter activity study – Reporter genes and Run-On assays. Translational Analysis – Western Blots and 2-D Analysis.

### Text Books

- 1. Cell and Molecular Biology S C Rastogi, New Age International Publishers, New Delhi (1996).
- 2. Fundamentals of Molecular Biology Ane's Student Edition. Veer Bala Rastogi, Ane Books India, New Delhi (2008)

### **Reference Books**

- 1. Instant Notes in Molecular Biology P.C. Turner, Viva Series Publishing, New Delhi
- 2. Essentials of Molecular Biology V Malathi, Dorling Kindersley (India) Pvt Ltd, New Delhi (2013).

### **Program: Biotechnology** Semester: IV **Course Title: Unit Operations-II** Course Code: 17EBTF202 L-T-P:: 3-0-0 Credits:3.0 **Contact Hours: 40** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:40 Examination Duration: 3 Hours** Unit I

### 1. Basic concepts

Fluid definition, Properties of biological fluids, Classification of biological fluids, Types of fluid flow, Reynolds number, pressure measurement devices: manometers, Bourdon gauge, bellow gauge, capsule gauge, Hydrostatic equilibrium, Newton's law of viscosity.

### 2. Fluid dynamics

Basic equations of fluid flow: Mass balance, Continuity equation, Bernoulli's equation, Laminar Flow through Circular pipe, Velocity and shear stress distribution, Boundary layer, Boundary layer separation, minor loss and major loss.

### 3. Flow past immersed bodies

Drag, lift, Drag coefficient, Kozney- Carman equation, Ergun's Equation. Motion of particles through fluids, Settling, Types of settling, Stoke's law, Newton's law, Criteria for settling regime, Numerical problems.

### Unit II

### 4. Transportation and metering of liquids

Pipe and tube, joints and fittings, valves—Diaphragm/pneumatic valve, pinch valve, ball valve, plug valve. Pumps: peristaltic pumps, sinusoidal pumps, single use diaphragm pumps. Characteristic curves of a pump, Measurement of fluid flow rates, venturimeter, rotameter, pitot tube, vortex-shedding meter, turbine meter, magnetic meters, ultrasonic meters, thermal meters. Numerical problems

### 08 Hours

### 5. Mechanical separations

Filtration, Filter media, Filter aids, factors affecting rate of filtration, specific cake resistance, media resistance. Types of filters, Membrane processes—ultra filtration and microfiltration, Filtration equipment: rotary drum filter, leaf filter. Sedimentation, Kynch theory of sedimentation, Thickener, Numerical problems. 07 Hours

04 Hours

05 Hours

### KLE Technological University Creating Value, Leveraging Knowledge

Unit III

### 6. Mixing and agitation of liquids

Mixing and Agitation, Flow patterns in agitated tanks, Mechanism of mixing, Estimation of mixing time, Types of Impellers & propellers, Standard turbine design, Numerical problems.

### 7. Dimensional Analysis and similitude

Units and dimensions, Dimensionless number, Rayleigh and Buckingham  $\pi$  theorem. Model and prototype. Similitude. Problems on Rayleigh and Buckingham  $\pi$  theorem.

05 Hours

05 Hours

### Text Books:

- 1. Unit operations of chemical engineering by McCabe W. L., Smith J. C, and Peter Harriott, 7<sup>th</sup> edition, McGraw-Hill, 2005.
- 2. Transport Processes and Separation Process Principles by C. J. Geankoplis, 4<sup>th</sup> edition, Prentice Hall of India, 2004.

### **Reference Books:**

- 1. Fluid Mechanics by John F. Douglas, Janusz M. Gasiorek, John A. Swaffield, 4<sup>th</sup> edition, Pearson Education limited 2007.
- 2. Principles of Unit operations by Alan S Foust, 2<sup>nd</sup> edition, John Wiley & Sons, 2005.
- Engineering Fluid Mechanics by K. L. Kumar, 7<sup>th</sup> edition, Eurasia Publishing house (P) Ltd, 2007.

Program: Biotechnology		Semester: IV
Course Title: Enzyme Tec	hnology Lab	Course Code: 15EBTP204
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 40
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:24	Examination Duration: 3 Hours	

### **List of Experiments**

- Biochemical Measurements: Molarity, Normality, Molality, Moles, weight/volume measurements, percent solution, concentration Units. pH measurements and Buffer preparation, SOP's, Instrument calibrations.
- 2. Determination of activity of amylase enzyme
- 3. Estimation of protein content of amylase and specific activity
- 4. Effect of temperature on enzyme activity
- 5. Effect of pH on enzyme activity
- 6. Effect of substrate concentration on enzyme activity
- 7. Effect of enzyme concentration on enzyme activity
- 8. Effect of inhibitor on enzyme activity
- 9. Enzyme immobilization and kinetics of immobilized enzyme
- 10. Molecular weight determination by SDS PAGE
- 11. Staining the gel using CBB and silver staining

### Text Books/ Reference Books:

- Introduction to Practical biochemistry David Plummer, McGraw-Hill Publishing Co,3<sup>rd</sup> edition,pp:332.
- Biochemical methods- Sadasivam and Manickam(1996), New Age International Publishers, 2<sup>nd</sup> edition, pp256.

### List of Experiments

- Basic Calculations and Solutions preparation skills and Good Lab Practices(GLPs) for the Molecular biology lab
- Study SOPs of Cell and Molecular Biology laboratory equipments Table top cooling Centrifuge, UV – Visible Spectrophotometer, PCR machine and Gel Documentation system.
- 3. Staining and microscopic observation of plant/animal cells and chromosomes
- 4. Study of Mitosis and Meiosis Cell Divisions
- 5. Isolation of genomic DNA from Bacteria/ Plant/ Animal cells
- 6. UV Spectrophotometric analysis of DNA and RNA
- 7. Calculation of Tm value of isolated DNA sample
- 8. Agarose gel electrophoresis and gel elution method.
- 9. Isolation and agarose gel electrophoresis estimation of Plasmid DNA
- 10. Extraction of Total RNA from different biological sources

Lipit I		

### **1.** Basics of Recombinant DNA technology

Development and Scope of Recombinant DNA Technology and Genetic Engineering. Emergence and commercialization of Molecular Biotechnology. Ethical, Social, Economical and Political issues related to Gene modification and Genetic Engineering. Gene Cloning: Introduction and Steps involved in gene cloning. Subcloning and its applications. Vectors in GE - biology, features, types, cloning & expression vectors

### 06 Hours

### 2. Enzymes in Genetic Engineering

DNA modifying enzymes and necessity of DNA modification in gene cloning. Enzymes used for DNA modification. Restriction Endonucleases, classification & mode of action, Role and applications of different DNA modifying enzymes in gene cloning process - DNA Polymerases, Reverse Transcriptase, RNA Polymerase, Alkaline Phosphatases, Polynucleotide Kinase and DNA Ligases etc.

### 05 Hours

### 3. Molecular Cloning Strategies and Genetic Transformation

Isolation and purification of nucleic acid (genomic/plasmid DNA and RNA), Quantification on and storage of nucleic acids, Construction of cDNA library, Construction of Genomic library ,Screening and preservation of DNA libraries. DNA Cloning – Methods and applications. Genetic Transformation of prokaryotes and DNA Transfection in Eukaryotic hosts. Biological and Non-biological methods of gene transfer in hosts. Chloroplast transformation.

### 09 Hours

### Unit II

### 4. Selection, Screening and Analysis of Recombinants

Introduction to screening and analysis of recombinants. Genetic selection and screening methods - Selectable Marker genes, Reporter genes. Screening using Nucleic acid hybridization methods - Preparation of probes for hybridization experiments and different blotting techniques. Screening by PCR based methods. Screening by Immunological methods

and Analysis of cloned genes.

### **5. Production of Proteins from Cloned Genes**

Introduction to recombinant gene expression, scope and applications of recombinant gene expression. Special vectors for expression of foreign genes in E coli. General problems with the production of recombinant protein in E coli. Production of recombinant proteins by Eukaryotic cells.

### 6. Directed Mutagenesis and Protein Engineering

Oligonucleotide – Directed Mutagenesis with M13 DNA, Plasmid DNA, PCR Amplification etc. Protein Engineering – Meaning and Scope, Protein Engineering for adding disulphide bonds, increasing enzymatic activity, decreasing protease sensitivity, modifying protein specificity, Increasing enzyme stability and specificity etc.

### Unit III

### 7. Genetic Engineering and Microbial Biotechnology

Genetic manipulation of Microorganisms – Introduction and scope. Applications of Recombinant Microorganism – Production of recombinant therapeutic proteins, Production of Antibiotics, Combating Human diseases, Microbial pesticides, EffilSAnt utilization of Carbohydrates and Bioremediation or Environmental cleanup.

### **05 Hours**

### 8. Plant and Animal Transgenic Technology and Applications

Applications of Transgenic Plant Technology – Development of Insect resistant plants, Herbicide resistant plants, Pathogens resistant plants, and Abiotic stress tolerant plants. Plants as Bioreactors for large scale production. Applications of Animal cloning and Transgenic technology - Cloning in Domestic animals. Applications of Transgenic Animals - as research models, and as bioreactors for large scale production of substances for Human welfare.

**05 Hours** 

### Text Books

- Genetic Engineering by Smitha Rastogi and Neelam Pathak, Oxford University Press, USA (2009)
- Molecular Biotechnology Principles and applications of Recombinant DNA by Bernard r Glick and Jack J Pasternak, ASM Press, American SoISAty for Microbiology, Washington DC 2003

07 Hours

07 Hours

### **Reference Books**

- 1. Gene Cloning and DNA Analysis by T A Brown. Wiley-Blackwell (2010)
- 2. An Introduction to Genetic Engineering Third Edn By Desmond S T Nicholl, Cambridge University Press, Singapore 2008.

Program: Biotechnology		Semester: V
Course Title: Bioinformatics		Course Code: 22EBTC301
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 04
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3 Hours	
	Unit - I	

### 1.Database

Bioinformatics: Definition, components, multidisciplinary nature, and applications of bioinformatics; Databases: Introduction, meaning, types and characteristics of databases, types of databases, Biological database: Classification, Primary Database: NCBI, Genbank, DDBJ, EMBL. File formats, Secondary Database: PROSITE, PIR, UNIPROT, BLOCKS, Pfam; metabolic pathway database: KEGG, Structure Database: PDB, MMBD, CATH, SCOP; Ligand Database, Enzyme database, human disease database, microbial and viral genome database, structure visualization tools.

### 07 Hours

### 2. Pairwise Sequence Alignment

Pairwise sequence alignment: Definition, significance, and applications; Types of pairwise sequence alignment: Local and Global alignment; Methods of pairwise sequence alignment: Dot matrix, Dynamic programming: features of dynamic programming, Global Alignment: Needleman & Wunsch Algorithm, Local Alignment: Smith – Waterman Algorithm, and Word method: BLAST, PSI-BLAST, PHI-BLAST and FASTA; Substitution matrices: PAM and BLOSUM; gap penalties.

### **08 Hours**

### **3.**Multiple Sequence Alignment

Multiple Sequence Alignment: Meaning, significance, and applications; Methods of MSA: Progressive Alignment methods, Iterative methods, Local Multiple sequence Alignment: Profile Analysis, BLOCK analysis, Pattern searching and Motif analysis, Statistical methods or Probabilistic models; Multiple Sequence Alignment editors.

05 Hours

### Unit - II

### 4. Phylogenetics analysis

Phylogenetic analysis: Meaning and significance; Concepts of evolutionary trees: Tree terminology, types of phylogenetic trees; fundamentals of phylogenetic models, Phylogenetic Data Analysis: Alignment: Building the data model, and extraction of phylogenetic data set; Determining substitution models: Models of Substitution Rates Between Bases, Models of

Among-Site Substitution Rate Heterogeneity, Models of Substitution Rates Between Amino Acids; Tree Building methods: Distance based methods: Neighbor Joining (NJ) method, Fitch-Margoliash (FM) method; Character based methods: Maximum parsimony, Maximum Likelihood; Tree Evaluation methods, Phylogenetic Softwares

### **5.Gene Prediction**

Gene structure, Prokaryote and Eukaryote gene prediction, Prokaryote and Eukaryote promoter site prediction Gene Prediction tools, Genomic database, Next Generation Sequencing.

### **6.Protein Prediction**

Protein structures: Secondary Structure: Alpha helix, beta Sheets, phi & psi angles, Ramachandran plots. Protein Structure Prediction: Use of sequence patterns and Amino acid; Protein Secondary Structure Prediction methods: Chou-Fasman, neural network, and nearest neighbor method; Tertiary Structure Predictions: Homology modeling; Protein sequence and structure analysis: Physicochemical parameters, binding site, sub-cellular location, protein stability, and patterns.

### 7.In-silico Drug Designing-I

.

Introduction to traditional drug designing, Introduction in-silico drug designing approach, Methodology for in-silico drug designing: Structure based and Ligand based drug designing; De novo drug designing, pharmacophore modeling in drug designing, Ligand screening, drug designing based on template, Steps in drug designing: Target identification, target validation, lead identification and validation; different tools used for drug designing.

Unit - III

### 8.In-silico Drug Designing-II

Molecular Modeling, Lipinski's rule, Virtual Screening, Process of Docking, Quantitative structure-activity relationship (QSAR), Physical and Chemical basis of receptor ligand interactions, ADMET property analysis, Molecular dynamics simulation of protein and protein-drug interaction.

Text Books

Course Title: Reaction E	ingineering	Course Code: 15EBTC303
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 50
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3	
Hours		

Unit-I

### 1: Introduction

Introduction to homogeneous and heterogeneous reaction in ideal reactors. Elementary and Non-elementary reactions kinetics of homogeneous and heterogeneous reaction system.

### 06 Hours

### 2: Interpretation of Batch Reactor data

Introduction to analysis of experimental reactor data, evaluation of rate equation, integral and differential analysis of kinetic data's, constant volume system and variable volume System. Total pressure technique of analyzing the kinetic data of gaseous reaction system.

### **08 Hours**

### 3. Introduction to Bioreactor Design.

General discussion on basics bioreactor design. General material balance equation for various conditions. Ideal reactors for a single reaction. Design equations for homogeneous system: batch, stirred tank and tubular flow reactor, size comparison of reactor systems.

### **08 Hours**

### Unit-II

### 4 Design for Multiple Reactions

Introduction, general design approach to multiple reactions. Quantitative and qualitative analysis of product distribution. Effect of temperature and pressure on single reaction. General graphical procedure, optimum temperature progression. Factors affecting choice of reactors: optimum yield, conversion, selectivity and reactivity.

### **08 Hours**

### **5 Non-Ideal Reactors**

Non-ideal reactors, residence time distribution studies, Stimulus Response Technique, pulse and step input response of reactors, RTD's for CSTR and PFR, Relationship between C, E and Fcurve. Kinetic models for non-Ideal reaction system, Axial Dispersion Model

### 6 Microbial kinetics:

Introduction to microbial kinetics, Yield coefficient, Simple kinetic models for microbial growth, transient growth kinetics Factors affecting the kinetics of Monod model; Growth of Filamentous Organisms. kinetic Models for product formation and substrate degradation

**08 Hours** 

### Unit-III

### 7 Heterogeneous Reactor System:

Heterogeneous reactions in Bioprocessing. The rate equation for surface for kinetics, Pore diffusion kinetics with combined with surface kinetics. Porous catalyst particle Performance equation for reactor containing Porous catalyst particles. External and internal mass transfer effects.

### 04 Hours

### 8 Reactor Engineering

Bioreactor configurations: Bubble column, airlift reactor, packed bed, fluidized bed, trickle bed,

04 Hours

### Text Books:

- **1.** Chemical Reaction Engineering by Octave and Levenspiel., John Wiley, 3<sup>rd</sup> Edition, 2006.
- 2. Elements of Chemical Reaction Engineering by Fogler, H.S., Prentice Hall, 1986.

### **Reference Books:**

- 1. Bioprocess Engineering Principles by Pouline M Doran Academic Press, 2003
- 2. Biochemical Engineering Fundamentals By Bailey and Ollies McGraw Hill 2<sup>nd</sup> Edition
- 3. Chemical Reactor Analysis and Design by Forment G F and Bischoff K B. John wiley, 1976
- 4. Chemical engineering By J.F Richardson and J.M Coulson Volume 6

Program: Biotechnology		Semester: V
Course Title: Biological Th	ermodynamics	Course Code: 15EBTC304
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 40
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	Examination Duration: 3	
	Hours	
	Unit I	

### 1. Basic concepts

System, Surrounding, State and Properties, Intensive and extensive properties, State and path functions, Heat reservoir, Hess Law, energy and biological world, energy flow transformation, energy conversions, energy, nutritional requirements of living systems, Flow of electrons in organism, energy flow in metabolic process, division of labor in cells, Numerical problems

### 06 Hours

### 2. Basic laws of thermodynamics

Zeroth law, First law of Thermodynamics, cyclic process, non-flow process, flow Process, internal energy, Heat capacity, second law of thermodynamics, Concept of entropy, Calculation of entropy changes, Third law of thermodynamics. Numerical problems.

### 09 Hours

### Unit II

### 3. PVT behavior

P-V-T Behavior of pure fluid, Processes involving ideal gases, Equation of state for real gases: Vander Waals equation, Redlich-Kwong equation, Peng-Robinson equation, Virial equation. Compressibility charts: Principle of corresponding states, Numerical problems.

### 07 Hours

### 4. Thermodynamic properties of Biological fluids

Classification of thermodynamic properties, Work function, Gibbs free energy, Gibbs-Helmholtz equation, ATP Synthesis in cell and Protein Folding, Metabolic reactions in cells. Entropy - heat capacity relationships, Relationships between C<sub>p</sub> and C<sub>v</sub>, Activity of molecule, Chemical potential, Oxidation-Reduction reaction, Cell Membrane Transportation & Protein Extraction, Osmosis, Nernst equation in membrane transportation, Numerical problems.

Unit III

### 5. Statistical Thermodynamics

Boltzmann distribution & partition function, Protein folding and helix-coil transition, Binding equilibria, Oxygen biding to myoglobin & Hemoglobin.

### 04 Hours

### 6. Reaction Equilibria

Reaction Stoichiometry, Effect of temperature on standard heat of reaction. energy coupling reactions, activation energy, Criteria of chemical reaction equilibrium, Relationship between Equilibrium constant and standard free energy change, Effect of temperature, pH and pressure on equilibrium constants and other factors affecting equilibrium conversion, Numerical problems.

06 Hours

### Text Books

- Biological Thermodynamics by Donald T. Haynie, 2<sup>nd</sup> edition, Cambridge University Press,2008
- Introduction to chemical engineering thermodynamics by J.M.Smith, H. C. VanNess, M.M. Abbott, 7<sup>th</sup> edition, Tata McGraw-Hill, NewDelhi, 2005.

### **Reference Books**

- 1. Thermodynamics. An engineering approach, by Yunus A. Cengel, Michael A. Boles, 8<sup>th</sup> edition, McGraw- Hill, 2014.
- 2. Chemical Engineering Thermodynamics by Y.V.C. Rao. 2<sup>nd</sup> edition, Universities Press, 1997.
- 3. Chemical and Process Thermodynamics by B.G.Kyle. 3<sup>rd</sup> edition, Prentice Hall of India Private limited, 2015.

### **Program: Biotechnology** Semester: V **Course Title: Research Methodology** Course Code: 15EBTC305 L-T-P:: 3-0-0 Credits:3.0 **Contact Hours: 40** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:40 Examination Duration: 3 Hours** Unit I

### 1. Introduction to Research and Research Methodology

Introduction, Objectives and scope of research, Research methods and Methodology. Types of research – Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical Concept of Translatory research.

### 2. Research Philosophy and Formulation of Research Problem

Concept of Research Philosophy- (Ontology, Logic, Method and Epistemeology) Formulation of Research Problem- Necessity of defining the research problem and framing the problem statement.

### 3. Sources and Review of Literature

Introduction and need for Literature Review., Search Procedures and Gap analysis. Sources of Literature - Research articles, review articles, Research communications, Book chapters. Bibliometrics- Citation index, Impact factor, author h-index and i10-index, awareness on predatory journals and its identification, grants and funding agencies for biotechnology research

Unit II

### 4. Sampling & Data Collection

Explain sampling and its significance. Describe different methods of sampling.

## 5. Statistical Analysis of Data

Measures of Central Tendency, Measures of Dispersion and variance, Correlation and Regression Development of hypothesis and testing : Chi- square test, Student's t-test, ANOVA

07 Hours

03 Hours

04 Hours

**08 Hours** 

03 Hours

### 6. Design of Experiments

Introduction and significance of DOE, Types - Factorial Design, Plackett Burman Design, Central Composite Design, Response Surface Methodology, Design of matrix and analysis, Contour

93

plots and response surface plots, QBD principles, Introduction to Artificial Intelligence and its application in biotechnology

KLE Technological University Creating Value, Leveraging Knowledge

05 Hours

### Unit III

### 7. Environment, Ethics and IPR in Research

Impacts of Research on Environment, - Ethical issues, ethical committees, Research Generated Intellectual Property Rights- Copy-right & royalty, Patent law, Trade mark, Trade secret, Geographical Indicator, Industrial Design. Concept of Plagiarism

### 05 Hours

### 8. Research Communication

Written Communication- Introduction, Structure and components of scientific reports – Bibliography, referencing and footnotes. Oral Presentation – Developing and delivering presentation

05 Hours

### Text Books

- 1. C.R. Kothari and Guarav Garg, Research Methodology, III Edition, New Age International Publisher, New Delhi, 2014

# 07 Hours

04 Hours

# KLE Technological University Creating Value, Leveraging Knowledge

Program: Biotechnology		Semester: VI
Course Title: Bioprocess Engineering		Course Code: 15EBTC306
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 04
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	<b>Examination Duration: 3 Hours</b>	
11 14 1		

Unit - I

# 1. Media and Inoculum development for industrial fermentations

Bioprocess development: An interdisciplinary challenge, Biotechnology & Bioprocess Engineering, steps in bioprocess development, Media ingredients, medium formulation, oxygen requirements, antifoams, medium optimization, Ingredients for mammalian cell culture and plant cell culture. Introduction, Criteria for transfer of inoculum, development of inocula for bacterial processes, yeast processes and mycelial processes. Inoculum development for plant Fermenter. 08 Hours

# 2.Sterilization

Media sterilization, Design of sterilization process: Batch Process (Dell factor, holding time, and thermal death kinetics), continuous sterilization process; sterilization of fermenter and other ancillaries. Scale up of sterilization, filter sterilization of air and media.

# **3.Design of bioreactors**

Basic objective of fermenter design, aseptic operation & containment regulation, achievement and maintenance of aseptic conditions, body construction, agitator and sparger design, baffles, stirrer glands and bearings. Animal cell bioreactors. Single use bioreactor, perfusion system, Data analysis software for fermenter Ex:simca software.

# 4.Scale Up of Bioreactor

Scale up of bioreactors: Introduction, Scale-Up methods: Geometric and Dynamic Similarity, Criteria for scale-up: Constant power consumption/volume, constant KLa, constant mixing time, constant tip speed, Regime analysis: Time constant for transport phenomena, time constant for conversion. Scale down approach.

05 Hours

# Unit - II

### 6.Mass Transfer

Mass transfer in Bioprocess: Role of diffusion in bioprocessing, Different equations in mass transfer ( liquid-solid, liquid-liquid and gas-liquid), Oxygen uptake in cell culture: Factors affecting cellular oxygen demand, Oxygen transfer from gas bubble to cells, Oxygen transfer in fermenter, measuring dissolved oxygen concentrations, Measurement of KLa: Oxygen balance method, Gassing out techniques ( static method of Gassing out and dynamic method of Gassing out) Sulphite oxidation, Factors affecting KLa, Oxygen transfer in large vessels, Numerical based examples on above.

### 05 Hours

### 7.Fermenter fluid rheology

Fermentation broth: Viscosity, Viscosity measurement, Rheological properties of fermentation broths, Factors affecting broth viscosity, Mixing in Fermenters: Mechanism of mixing, Assessing mixing effectiveness, estimation of mixing time, Power requirement for mixing: Ungassed Newtonian fluids, ungassed non-Newtonian fluids, Gassed fluids, Calculation of power requirements, Scaleupof mixing systems, Improving mixing in Fermenters, Effect of rheological properties on mixing, Role of shear in stirred fementers: Interaction between cells and turbulent eddies, Bubble shear, operating conditions for shear damage. Numericals

06 Hours

### Unit - III

**8.Bioreactor kinetics** Batch reactor kinetics, CSTR kinetics, Fedbatch kinetics and plug flow kinetics, Numericals

### 9.Solid State fermentation:

Introduction, SSF v/s SMF, Types of SSF reactors, Microbial growth kinetics in SSF, Heat & Mass Transfer in SSF

### Text Books

- 1. Pauline M. Doran, Bioprocess Engineering Principles, 2, Academic Press, 2003
- 2. Stanbury & Whittaker, Principles of Fermentation Technology, 2, Pergamum Press, 2000

### **Reference Books**

- 2. Bailey, James E.; Ollis, David F., Biochemical Engineering Fundamentals, McGraw-Hill Education, 1986

05 Hours

Program: Biotechnology		Semester: VI
Trogram. Diotectinology		
Course Title: Bioprocess Control and Automation		Course Code: 19EBTC302
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 04
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	<b>Examination Duration: 3 Hours</b>	
Unit I		

**1 Instrumentation & Process Dynamics:** Introduction to Measurement of important physicochemical and biochemical parameters in bioprocess. Methods of on line and off line estimation of biomass, substrates and products. Brief introduction to typical automatic control system and its components. Open loop and closed loop control systems.

### **05 Hours**

**2 First & Second Order Systems:** Mathematical representation of physical systems. Transfer function representation of linear first order systems, Examples: mercury in glass thermometer & Liquid level system. Mathematical forms of standard Input function/Forcing Functions such as Step input, Impulse Input, Linearly increasing Input and Sinusoidal Input. Response of first order system for step input, Features of step response, Response of linearly increasing input. Conceptual numerical. First Order Systems in Series: Interacting and Non-Interacting systems & their Transfer function representation. Second Order Systems: Transfer function representation of Second order systems, Example: Pneumatic Control Valve.

### 10 Hours

### Unit II

**3 Controller and Final Control Elements**: Different types of controllers-P (Special case of P-controller i.e ON-OFF controller), PI, PD, PID controllers. Derivation of Transfer Functions of different types of controllers. Final control element: The role of Final control Element in control system. Example: Pneumatic Control Valve: Working of Pneumatic control valve, Types of Pneumatic Control Valves i.e. Air to close & air to open.

### 10 Hours

**4 Block Diagram Reduction**: Block diagram representation of control systems, Block diagram reduction in case of Servo and Regulatory control systems. Reduction of block diagrams for single input & Single output systems (SISO) & Multiple Input & Multiple Output Systems (MIMO), Problems on block diagram reduction.

**5** Block Diagram Reduction (MIMO systems): Analysis of Multiple Input Multiple Output Systems: Introduction to Multiple Input & Multiple Output Systems (MIMO), Examples of MIMO systems. Analysis of MIMO systems considering only one Input at a time while other Inputs are Suppressed. Considering only one output at a time while other outputs are Suppressed. Problems on block diagram reduction considering MIMO systems.

Unit III

**6** Transient response of different controllers for Servo & Regulatory control Problems: Transient response of P, PI, PD & PID controllers for servo and regulatory problems. The determination of offset in all cases.

### 05 Hours

10 Hours

**7 Analysis of Stability:** Concept of stability, stability criterion. Routh test for stability. Theorems of Routh Array test, Conceptual numerical on Routh test for stability.

### **05 Hours**

### Text Books:

- 1. Process System analysis and control by Donald R Coughnowr, 2<sup>nd</sup> Edn.Mc Graw Hill, 1991
- 2. Chemical Process Control by George Stephanopoulos, Prentice Hall of India, 1999

### **Reference Books:**

1. Process Control-Peter Harriott, Tata McGraw-Hill Publishing Company Limited, 2004.

Program: Biotechnology		Semester: VI
Course Title: Bioprocess Engineering Lab		Course Code: 22EBTP303
L-T-P:: 0-0-1.5	Credits:1.5	Contact Hours: 03
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:36	<b>Examination Duration: 3 Hours</b>	
List of Experiments:		

- 1. Study of lab fermenter: Design, components, and process control.
- 2. Study of pilot scale fermenter: Design, components, and process control.
- 3. Understanding aseptic operation and containment regulation of fermenter.
- 4. Sterilization-in-place: Sterilization of media in lab fermenter.
- 5. Clean-in-place: Procedure involved in maintenance and cleaning of fermenter.
- 6. Monitoring and control of Operation parameters: Maintenance and Calibration of fermenter sensors, control of process parameters.
- 7. Fermentation methods: Understanding aseptic operation and containment regulation of fermenter: Inoculation, aeration and sampling procedures.
- 8. Determination of kinetic parameters of microorganism using batch mode.
- 9. Design an experiment to determine mixing time, power requirement, and  $K_{La}$  of fermenter.
- 10. Introduction to bioprocess modeling and simulation software: SuperPro.
- 11. Model batch reactor using SuperPro

11441		

Unit I

### **1. Introduction to Bio-analysis**

Introduction to instrumentation, Functional elements of an instrumentation system, static and dynamic characteristics, calibration of instrumental methods, Types of errors, Methods of expressing precision and accuracy, Confidence limits, Uncertainties in Instrumental measurements – Sensitivity and detection, preparation & storage of solutions, usage of laboratory glasswares, statistical analysis of experimental data, Electrodes and Biochemical preparation.

### **05 Hours**

### 2. Spectroscopy

General principles–Radiation, energy and atomic structure- types of spectra and their biochemical usefulness basic laws of light absorption. Electromagnetic radiation & Spectrum, Beer – Lambert's Law and apparent deviations; UV – VIS Spectrophotometer

### **05 Hours**

### 3. Advanced Spectroscopy

Spectroflourimetry, Atomic absorption spectroscopy, IR spectroscopy, FTIR, Nuclear Magnetic Resonance, Mass spectroscopy, ORD, CD, X-ray diffraction.

### 05 Hours

### Unit II

### 4. Chromatographic techniques

Analytical techniques for biomolecules purification, Paper chromatography, thin layer chromatography, Column chromatography, Gas chromatography, Ion-exchange chromatography, molecular exclusion chromatography, affinity chromatography, High performance liquid chromatography & UPLC- Principles, Methods, Instrumentation, Detectors, Analysis of data.

### 5. Electrophoretic techniques

Theory & application of polyacrylamide & Agarose gel electrophoresis for protein & nucleic acids, capillary electrophoresis, pulsed field gel electrophoresis, Iso-electric focusing, 2D-gel electrophoresis and Immunoelectrophoresis

### 06 Hours

### Unit III

### 6. Centrifugation techniques

Basic principles of sedimentation, centrifuges and their uses, preparative ultracentrifuges, density gradient ,analytical ultra-centrifuges, applications

### 06 Hours

### 7. Advanced Instrumental methods

LC-MS, GC-MS, HPTLC, SEM, Atomic Force Microscopy, transmission electron microscopy (TEM)

04 Hours

### Text Books

- 1. Wilson K & Walker J., Principles and Techniques of Practical Biochemistry, 5<sup>th</sup> edition, Cambridge Univ. Press., 2000.
- 2. Rodney Boyer, Modern Experimental Biochemistry, 3<sup>rd</sup> edition, Pearson Education, 2002
- 3. Chatwal and Anand, Spectroscopy, Himalaya Publishing house-New Delhi, 2016

ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Linit I		

### **1. Introduction to Process Design Development**

Design project procedure, design information from the literature and other sources of information, flow diagrams, preliminary design, and comparison of different processes, Equipment design and specialization, factors affecting the investment.

### 06 Hours

### 2. General Design Considerations

Marketability of the product, availability of technology, Health and safety hazards, raw materials, human resources, loss prevention Environmental protection and utilities, site characteristics, plant location, plant layout, plant operation and control, utilities, structural design, storage, materials handling, materials and fabrication Selection, optimum design and design strategy. Waste disposal, physical treatment, chemical treatment and biological treatment, govt. regulations and other legal restrictions, community factors. Safety and hazard control measures.

### **10 Hours**

### Unit II

### 3. Cost Analysis and Manufacturing Cost

Cost Analysis: Factors involved in project cost estimation. Cash flow diagrams for the industrial operation, Cumulative cash position, factors affecting the Investment and production cost, Different methods employed for the estimation of the capital investment. Estimation of equipment cost by sixth tenth rule, Cost index. Marshall and swift installed – equipment indexes, Engineers News-Record construction index, Nelson –Farrar refinery construction index. and Chemical Engineering plant cost index Manufacturing Costs: Direct Production costs, indirect cost and fixed charges (including depreciation, taxes, insurance, rental costs etc.)

10 Hours

### 4. Bioprocess Economics:

Economic analysis for the production of following Products.(Historical Perspective, Fermentation Technology, Recovery of product and process economics of following

FMCD2009 / 2.0

### products)

- High volume, low value products. (Citric acid, Ethanol and Amino acids etc)
- Medium volume, medium value products.( Antibiotics, Crude Enzymes and Vitamins etc)

KLE Technological University Creating Value, Leveraging Knowledge

• Low volume, high value products. (MAb, purified Enzymes and Therapeutic proteins etc)

06 Hours

### Unit III

### 5. Profitability Analysis and Optimization Technique

i) Importance of profitability analysis in investment decision making. Different Methods for calculating the profitability. Minimum Acceptable Rate of return. Methods that Do not consider Time value of money.

### 04 Hours

ii) General procedure to find the optimum conditions, factors affecting the optimization, comparison of analytical and graphical methods. Linear programming, Simultaneous Equations and dynamic programming

04 Hours

- 1. Peters and Timmerhaus, Plant Design and Economics for Chemical Engineers, McGraw Hill 5<sup>th</sup> edition, 2004.
- Chemical Engineering plant design, Frank C Vilbrandt and Charles E Dryden , McGraw Hill 4<sup>th</sup> edition, 1959

Course Title: Insilco Modeling and Drug Design		Course Code: 15EBTE302
L-T-P:3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

### 1. Insilico Drug Design

Generation of rational Approaches in Drug Design Molecular modeling: The second generation, Conception frame and methodology of molecular modeling, Importance of the "Bioactive Confirmation", Molecular Mimicry and Structural Similarities, Molecular Mimicry, Structural similarities and Superimposition Techniques, Rational Drug design and Chemical Intuition

### **08 Hours**

### 2. Molecular Modeling :

Constructing and Initial Model, Refining the Model, Manipulating the Model, Visualization. Structure generation or Retrivel, structure visualization, Confirmation generation, Deriving Bioactive Confirmations Molecule Superposition and Alignment Deriving the Pharmacophoric Pattern, Receptor Mapping, Estimating Biological Activities, Molecular Interactions: Docking Calculation of Molecular Properties, Energy Calculations ( no derivation), Example of Small Molecular Modeling Work,

### **08 Hours**

### Unit II

### 3. Computer Assisted New LEAD Design.

Introduction, Basic Concepts, Molecular Recognition by Receptor and Ligand Design, Active Confirmation, Approaches to Discover New Functions, Approaches to the Cases with known and unknown receptor structure

### 03 Hours

### 4. Docking Methods

Program GREEN Grid: Three-Dimensional Description of Binding Site Environment and Energy Calculation, Automatic Docking Method, Three Dimensional Database Search Approaches, Automated Structure Construction Methods with known Three Dimensional Structure of the Receptor, Structure construction in the case of Unknown Receptor Structure. Scope and Limitation Points for Consideration in Structure Methods, Handling of X Ray Structure of Protein, Future Perspectives, Types of programs available for molecular modeling scope and limitations-interpretation of results. **11 Hours** 

### Unit III

### 5. Computer Assisted Drug Discovery-Part-I.

The Drug Development Process, Introduction, The Discovery and Development Process, New Lead Discovery Strategies, Composition of Drug Discovery Teams, The Practice of Computer-Assisted Drug Discovery (CADD),

### 05 Hours

### 6. Computer Assisted Drug Discovery-Part-II.

Current Practice of CADD in the Pharmaceutical Industry, Management Structure of CADD Groups, Contributions and Achievements of CADD Groups, Limitations of CADD Support, Inherent Limitations of CADD Support, State of Current Computational Models, Software and Hardware Constraints.

05 Hours

### Text Books:

#### 1.Introduction to modeling:

Introduction, Mathematical Modeling of Bioprocess Engineering System, General Aspects of the Modeling Approach, General Modeling Procedure: Fundamentals uses of mathematical model, scope of coverage, principles of formulation; Fundamental Laws of Modeling: continuity equation, energy equation with examples

#### 05 Hours

#### 2.Fundamental Laws of Modeling:

Equation of motion, transport equation, equation of state, phase and chemical equilibrium, chemical kinetics; Lumped and distributor parameters with examples

05 Hours

#### 3. Mathematical models of Biochemical Engineering Systems:

Modeling of Batch reactors, modeling of CSTR, Numericals. Plug flow reactor, Fluidized bed reactor, Reactors used in effluent treatments, packed bed reactor.

#### 05 Hours

#### Unit II

#### 4. Use of MATLAB in Process Simulation:

Basics-Data analysis-curve fittings, Numerical integration, Euler and fourth order RungeKutta method, Input and Output in MATLAB. Solving problems using MATLAB by numerical integration, Euler and fourth order Runge Kutta methods. Simulation of CSTR and Batch Reactor, Simulation of Plug flow reactor.

Steps involved in process design, Process flow diagram structure and hierarchical approach,

importance of Material and Energy balance, selection of unit operations,

10 Hours

#### KLE Technological University Creating Value, Leveraging Knowledge

**4.Introduction to Process Design:** 

#### KLE Technological University Creating Value, Leveraging Knowledge

#### Unit III

#### 5.Introduction to process simulation software

Bioprocess design with example: Process Description, Specifying Process Sections, Specifying Equipment Sharing, Initialization of Reaction Operations, Process Analysis, Cost Analysis and Economic Evaluation, Environmental Impact.

#### 05 Hours

#### 6. Use of Super Pro in Process Simulation:

Components and mixtures, Physical and Chemical properties of components, material and energy balance simulation, adding unit operation, scheduling the unit process, process cost estimation, sizing of the unit operation.Case study: Monoclonal antibody production, Enzyme production

05 Hours

#### Text Books:

Program: Biotechnology		Semester: VI
Course Title: Structural	Biology	Course Code: : 22EBTE301
L-T-P:3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

**1** Introduction to Protein Structures: Concept of chirality in biological molecules & its significance, Structural significance of biomolecules, Classification & structures of amino acids, Levels of protein structure, Conformational analysis & forces that determine protein structures, Geometries, Potential energy calculations, Main chain torsional angles –  $\phi$  (phi),  $\Psi$  (psi),  $\omega$  (omega) &  $\chi$  (chi).

#### 06 Hours

#### 2. Protein Structures

Ramachandran plot, allowed chi angles in proteins, hydrogen bonding, disulphide bonds, hydrophobic interactions. Secondary structures : Hélix- Alpha hélix pi hélix, Beta sheets, coils and turns, Helix to coil transition & zipper model. Tertiary structures of proteins, quaternaire structures of proteins. Relationships between primary, secondary tertiary & quaternaire structures of proteins. protein folding- General features & thermodynamic aspects of protein folding, folding kinetics. Ligand interactions, Scatchard plot, co-operative interactions, Hill constant & linked functions. Relationship between the primary, secondary, and tertiary structure of proteins. Structure of Immunoglobulin, fibrous proteins (Examples).

#### **09 Hours**

#### Unit II

#### **3. Structures of Nucleic Acids**

**S**tructure and classification of Nucleic acids. Difference between nucleoside and nucleotide. Levels of nucleic acid structure, general characteristics of nucleic structure, glycosidic bond, rotational isomers & ribose puckering forces (C2' exo & endo, & C3'exo & endo). Polynucleotide chain, main chain & side torsional angles, base pairing (Watson-Crick, Hoogstein, Reverse Hoogstein, etc), base stacking, secondary structure of DNA and tRNA, A, B & Z forms of DNA, intra-molecular interactions in the double helix. Thermodynamics of melting of double helix. Kinetics of unwinding of double helix, interaction with small ions. DNA replication. Tertiary structure of DNA and tRNA.

#### 11 Hours

#### 4. Structures of Biomembranes

Structure and conformational properties of cell membranes, Singer and Nicholson model,

integral proteins in membranes, conformational variations during ion transport, signal transduction and molecular reception (qualitative).

#### 04 Hours

#### Unit III

#### 5. Biomolecular Interactions and Dynamics-I

Association of macromolecules, molecular conjugates, supramolecular interactions, DNA – Protein interactions, DNA – small molecule interactions, RNA – Protein interactions, Protein – protein interactions, lipid/membrane-protein interactions

### 05 Hours

#### 6. Biomolecular Interactions and Dynamics-II

Molecular mechanics and dynamics (Newtonian and Monte Carlo simulations), theoretical principles and its importance towards in-silico simulations, results of molecular dynamics calculations and their implications to biological function.

#### 05 Hours

Program: Biotechnology		Semester: VII
Course Title: Downstream Processing Technology		Course Code: 22EBTC401
L-T-P:: 4-0-0	Credits:4.0	Contact Hours: 04
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3	
	Hours	
11		

#### Unit I

#### 1. Introduction

Role and importance of downstream processing in biotechnological processes. Characteristics of biological mixtures: morphology of cells, concentration of cells, products and by-products, rheological behavior. Process design criteria for various classes of byproducts (high volume, low value products and low volume, high value products), Steps involved: pretreatment, solid/liquid separation, concentration, purification, formulation. case studies, costing of product and numerical

#### **09 Hours**

#### 2. Primary Separation Techniques

Cell disruption methods for intracellular products: mechanical methods, physical methods and chemical methods. Removal of insolubles, Biomass (and particulate debris) heat and photosensitive materials separation techniques; Pretreatment of fermentation broth: heating, coagulation and flocculation, adsorption on filter aids. Theory of centrifugation and methods of centrifugation: tubular bowl centrifuge, disc stag centrifuge, decanter centrifuge. Theory of filtration and methods of filtration: plate and frame filter press, rotary drum filter and types of filter media, numerical.

11 Hours

#### Unit II

#### 3. Membrane separation processes

Membrane – based separations theory; Design and configuration of membrane separation equipment; Concentration polarization and fouling – causes, consequences and control techniques. Membrane modules: tubular module, flat sheet modules, spiral wound module, hollow fiber membrane. Classification of membrane processes: Based on hydrostatic pressure, concentration and applied electric field

#### 12 Hours

#### 4. Enrichment operations

Precipitation methods with salts (salting-in and salting-out), organic solvents, polymers,

isoelectric precipitation. Extraction methods for separation: Reversed micellar extraction and Aqueous two-phase extraction, Supercritical extraction; In situ product removal / integrated bio-processing, SDS PAGE: determination of molecular weight of unknown protein. Numerical.

#### 08 Hours

#### Unit III

#### 5. Product recovery-I

Introduction to chromatography: Principle, instrumentation and practices (Van Deemter equation). Derivation of equation for resolution of peaks, Preparative High Performance Liquid Chromatography for recovery of product, Ion Exchange Chromatography for separation of ionic compounds, numericals.

#### 6. Product recovery-II

Gel Filtration Chromatography for molecular weight determination. Affinity Chromatography for purification of protein in cell free extract. Polishing Operations: Crystallization, Drying and Freeze drying or lyophilization

05 Hours

05 Hours

11.4.1		

#### Unit – I

#### 1.Notation and terminologies

Pipe Joints: Flanged pipe joint, Hydraulic pipe joint, Gland & stuffing box expansion joint, Union joint, Socket & spigot Joint. Welded joints: Butt, Fillet, lap welded joint. Vessel openings: Manholes, nozzles, drains, sight Glasses. Pipe design: Basic notation and terminologies, Schedule 10 and 40. Introduction to design.

#### 04 Hours

#### 2. Materials of Construction

Material properties: Mechanical & types of Corrosion; Materials used: Stainless steel and their alloys, properties of different metals used in stainless steel, Selection criteria, Different Standards (Indian steel codes, American Society for Mechanical Engineers-Bioprocess Engineer (ASME BPE ) standard, AISI (American Iron & Steel Institute) standard), different Stainless steel grade: 304, 316.

**08 Hours** 

#### Unit – II

#### **1.Design of Bioreactor**

Fermenter: Steps involved in the design: Volume of Reactor, H/D ratio, impeller design, baffle design, shaft design, Thickness of the shell, thickness of the top & bottom cover, thickness of jocket, heat transfer area of jacket, power number, power required to drive the Impeller.

#### 09 Hours

#### 2. Design of shell and tube Heat exchanger

Heat exchangers: Steps involved in the design, Energy balance, LMTD, Tubing characteristics, Tube side heat transfer coefficient, baffle spacing, shell side heat transfer coefficient, Fouling, Overall heat transfer coefficient, Tube side & shell side Pressure drop Calculations.

#### KLE Technological University Creating Value, Leveraging Knowledge

Unit – III

#### **3.Equipment qualification & Validation**

Design qualification, FAT (factory acceptance test), Site acceptance test, Commissioning, Installation Qualification, Operational qualification, Performance qualification, Equipment Validation.

05 Hours

#### **4.Bioreactor Accessories**

Sterilization by filters, Design criteria for filters, filter housing, Filter Integrity test: Diffusive air flow test, Bubble point test, Pressure drop test, Water intrusion test; Valves: Diaphragm valve, Pneumatic valve, pinch valve, Non-return safety Valve; Aseptic seals in fermenter (Gasket, Lip seal, O rings).

05 Hours

- 1. Fermentation & Biochemical engineering handbook by H. C. Vogel & C. L. Todaro, 3<sup>rd</sup> edition, Standard publishers distributors.
- Introduction to chemical equipment design by B. C. Bhattacharyya, 1<sup>st</sup> e-book edition, CBS Publishers & distributors, 2018

# 1 Introduction History of fermentation products, Range of fermentation process: Traditional approach:

**Examination Duration: 3 Hours** 

biomass, enzymes, metabolites and biotransformation; Modern fermentation process: rDNA products, animal cell culture: therapeutic proteins, monoclonal antibodies; application of system biology approach; generalized representation of typical fermentation process.

Unit I

### 2. Isolation and improvement of industrial microorganisms

Credits:3.0

ESA Marks:50

Isolation methods: Primary screening and secondary screening; Improvement of industrial microorganism: selection of induced mutants for primary and secondary metabolites, isolation of revertant mutants, use of rDNA systems, and improvement by other properties.

# **3.** Fermentation products Beverages (beer), Ethanol, Aminoacids, enzymes(lipase/protease), penicillin, therapeutic

proteins, monoclonal antibodies and vaccines.

4 Bioreactor configuration-I

**Program: Biotechnology** 

L-T-P:: 3-0-0

ISA Marks:50

**Teaching Hours:40** 

**Course Title: Industrial Biotechnology** 

CSTR with recycle, CSTR in series, Airlift reactor, Fluidized bed bioreactor, bubble column bioreactor, packed bed bioreactor, tickle bed bioreactor, deep jet bioreactor, rotating disc bioreactor.

#### 5. Bioreactor configuration-II

Animal cell bioreactors:- Homogeneous reactor: Solid and macro porous micro carriers bioreactor; Heterogeneous reactor: Hallow fiber bioreactor, Packed glass bed bioreactor, fluidized bed bioreactor, cell encapsulation; Disposable bioreactor: Wave bioreactor and stirred bag bioreactor, Perfusion system- single use reactor and Open raise ponds, photo bioreactor.

05 Hours

# 05 Hours

05 Hours

05 Hours

## 05 Hours

117

## 6. Advance downstream processing

Process integration in product recovery, large scale refolding of therapeutic proteins, advanced membrane technology, Chromatography: column quantification and validation, AKTA purifier, reversed micellar technique for bio separation Single use technology in purification.

05 Hours

Unit II

0	<b>KLE Technological</b>
KLE TECH	University Creating Value, Leveraging Knowledge

Semester: VII

**Contact Hours: 03** 

Total Marks:100

Course Code: 20EBTE401

#### Unit III

#### 7. Fermentation monitoring and control:

On-line and off-line monitoring instruments, Bioprocess modeling for control, Estimation technique: Traditional method, linear black-box model and non-linear model; control strategies for fermentation, real time data analysis: Raman spectroscopy.

#### 8. Fermentation data analysis:

Introduction, classification of fermentation measurement and quantities, calculation of metabolites, estimation of unmeasured variables, calculation of integral and averaged variable, physiological variable and pattern recognition technique, SIMCA software.

05 Hours

05 Hours

#### **1. Fundamentals of Food Processing Technology**

Basic concepts about properties of foods: liquid, solid and gases; Introduction to food processing: scope and significance; Principles of food processing and preservation

#### 2. Microbial Food Spoilage

Food as substrate for microorganisms, Primary sources of microorganisms in foods, Microbes induced biochemical changes in foods, Microbiological Examination of foods, Food poisoning, and types. , A brief account of various organisms related with food poisoning- *E. coli, Clostridium, Bacillus, Staphylococcus and Vibrio* 

#### 3. Food biotechnology and Applications

Enzymes, organic acids, antibiotics, baker's yeast, single cell protein and Mushrooms. Biocolours, Concept of fermented foods and beverages, Probiotics, Prebiotics & Symbiotics, Genetically Modified Foods

#### Unit II

#### 4. Unit Operations in Food Processing

Introduction, Food Engineering operations- raw material preparation, cleaning, sorting, grading and peeling. Food conversion operations- size reduction, emulsification, filtration, membrane separation, centrifugation and extraction. Pulsed Electric Field processing, High-Pressure Processing,

04 Hours

#### **5. Thermal Processing of Foods**

Heat processing using steam or water, Blanching, Pasteurization, Heat Sterilization,

#### 07 Hours

04 Hours

Evaporation, Distillation, Extrusion and Canning. dielectric heating, ohmic and infrared heating. Dehydration, Intermediate Moisture Foods, Baking and Roasting, Heat processing using hot oils- Frying.

#### 6.Non-Thermal Processing of Foods

Chilling, Freezing, Freeze-drying, Vacuum Concentration, Processing by chemical methodssugar, salt, curing, smoking, acid and chemicals. Irradiation of foods. Controlled and Modified– Atmosphere Packaging. Concept of hurdle technology.

05 Hours

06 Hours

Unit III

#### 7. Food Product Development

Concept and need of new product development, testing and sensory evaluation, Development of product formulation and development,, Role of food ingredients in human health Packaging and shelf life of food products. Concept of Functional Foods and Nutraceuticals.

#### 05 Hours

#### 8. Food laws, Labeling and Regulatory Bodies

Food Laws- General Standards and Regulations as per FSSAI, . Regulatory bodies governing food laws. Certification and labeling of foods. Concept of HACCP and AGMARK

#### 05 Hours

#### Text Books:

- 1. P.J.Fellows, Food Processing Technology. Principles and Practices, Second Edition, Woodland Publishing Ltd, Cambridge, England, 2002
- 2. Avantina Sharma, Text Book of Food Science and Technology, International Book Distributing Co, Lucknow, UP, 2006

Program: Biotechnology		Semester: VII
Course Title: Environmental Biotechnology		Course Code:22EBTE401
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

#### 1. Introduction

Issues and scope of Environmental Biotechnology, Environment and Biotechnology, Areas of applications for Biotechnology. Microbes and Environment, Genetically modified organisms and Legislation.

#### 03 Hours

#### 2. Waste Water Treatment

Sources of water pollution, Waste water characteristics: Physical, Chemical and Biological characteristics. Chemical Oxygen Demond (COD) and Biochemical Oxygen Demond (BOD). Introduction to physical and chemical waste water treatment methods. Biological wastewater treatment methods: Aerobic suspended growth treatment processes (Activated Sludge Process, aerared lagoons etc), Aerobic attached growth treatment processes (Trickling Filter, Rotating Biological contactors), Anaerobic suspended growth treatment processes- contact digestors, packed column reactors, UASB. Bioelectrochemical systems (BES) including microbial fuel cells (MFCs).

#### 12 Hours

#### Unit II

#### 3. Solid waste Management

Basic aspects, Generation of solid wastes, general composition of Municipal solid waste, On site handling, storage and processing, Collection of solid wastes. Solid waste processing techniques and equipments. Recovery of biological conversion products from solid waste such as composting, sanitary landfilling, recycling, vermicomposting, incineration. Solid waste management for energy recovery-Biogas production, processing of lignocellulosic waste biomass for ethanol production

#### 08 Hours

#### 4. Bioremediation and Bioleaching

Uses of bacteria for bioremediation, co-culture and mixed culture biotechnology bioremediation of aromatic and aliphatic hydrocarbons, PCB dechlorination, immobilization techniques for bioremediation, biosorption & bioaccumulation, bioaugmentation and biostimulation genetic engineering of microbes for bioremediation. Phytoremediation-plants capable of assimilating heavy metals. Bioleaching using microbes, role of Thiobacilli, direct &

indirect bioleaching, copper extraction by leaching, dump leaching.

07 Hours

#### Unit III

#### 5. Biofuels

Environmental Biotechnology and biofuels: biogas; bioethanol/biomethane; biodiesel; biohydrogen, bioelectricity; Description of the industrial processes involved, microorganisms and biotechnological interventions for optimization of production; phycoremediation- biofuels through algal biotechnology; Microbiologically enhanced oil recovery (MEOR); Production of biosurfactants: bioemulsifiers;

05 Hours

#### 6. Environmental Impact Assessment

Introduction, Scope and history of EIA, Need of Environmental Impact assessment. Stakeholder and public involvement, Identification and quantification of environmental effects and Environmental Impact statement (EIS), Environmental Regulations.

**05 Hours** 

#### Text Books

- 1. <u>Pramod Kumar</u>, <u>Vipin Kumar</u>, <u>Pravin Kumar Sachan</u>, Textbook of Environmental Biotechnology, Woodhead Publishing India in Energy, 2019.
- 2. Indu Shekhar Thakur, Environmental Biotechnology, 2<sup>nd</sup> edition: Basic Concepts and Applications, Dreamtech Press, 2019.
- **3.** Pradipta Kumar Mohapatra, Textbook of Environmental Biotechnology, I K International Publishing House, 2007.

- **1.** Ozcan Konur, Bioenergy and Biofuels, 1<sup>st</sup> edition, CRC press, 2018.

Program: Biotechnology		Semester: VII
Course Title: Quality Assurance & Regulations		Course Code:18EBTE403
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

#### 1. Introduction

Introduction to Quality and Quality Regulation, Validation and Regulatory Affairs in Bio (Pharmaceutical) Manufacturing: An Introduction to FDA Operations & Industry Compliance Regulations, The Fundamentals of Regulatory Compliance with respect to Good Clinical Practice (GCP), Good Manufacturing Practice (GMP) & Good Laboratory Practice (GLP).

#### 06 Hours

#### 2. Quality and Quality Management

Terms Relating to Quality Management System, Quality Policy, Quality Objectives, Quality Planning, Quality Control, Quality Assurance, Quality Improvement, Continual Improvement, Effectiveness, Efficiency; Relating to Process and Product, Quality Characteristics; Terms Relating to Conformity, Non-Conformity, Defect, Preventive Action, Corrective Action, Rework, Repair, Scrap, Concession, Deviation Permit, Release; Terms Relating to Documentation.

#### 10 Hours

#### Unit II

#### 3. Process Validation

Definition and concept of validation, An introduction to process validation, Validation and Qualification, IQ, OQ and PQ. A Review of Prospective, Concurrent, Retrospective Validation Calibration and performance evaluation. Validation of Water & Thermal Systems, including HVAC Facilities & Cleaning Validation. Validation septic Processes, Computer software validation in pharmaceuticals (CSV).

#### 10 Hours

#### 4. Analytical Method Validation

FDA and ICH guidelines. Analytical method validation, Specificity, Linearity, Accuracy, Precision, Limits of detection (LOD) and quantification (LOQ), Minimum detectable amount (MDA), Sample stability and method robustness, System suitability, Statistical process control for HPLC, Troubleshooting out-of-control systems, Case studies, Validation of Analytical Methods.

Unit III

#### 5. Quality Standards

Introduction, ISO 9000 Series of Standards, Management Responsibility, Quality System, Contract Review, Design Control, Document and Data Control, Control of Quality Records, Internal Quality Audits, Training, Servicing, Environmental Management System.

#### 04 Hours

#### 6. Implementation and Regulation

Role of QC and QA in Bio/Pharmaceutical organization, Quality System, Contract Review, Design Control, Document and Data Control, Product Identification and Traceability, Process Control, Control of Quality Records, Internal Quality Audits, Training.

04 Hours

#### Text Books:

- 1. Pharmaceutical Process Validation by Robert Nash and Alfred Wachter, Marcel Dekker. Publisher: Marcel Dekker Inc. 2011.
- 2. Good Manufacturing Practices for Pharmaceuticals: A Plan for Total Quality Control From Manufacturer to Consumer, Sidney J. Willig, Publisher: Marcel Dekker Inc. 2005.

- 1. Validation of Pharmaceutical Processes: Sterile Products, Frederick J. Carlton (Ed.) and James Agalloco (Ed.), Marcel Dekker, 2008.
- 2. Validation Standard Operating Procedures: A Step by Step Guide for Achieving Compliance in the Pharmaceutical, Medical Device, and Biotech Industries, Syed Imtiaz Haider, Saint Lucie Press, 2004.

Program: Biotechnology		Semester: VII
Course Title: Process Safety & Risk management in		Course Code:22EBTE402
Industrial Biotechnology		
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

#### 1.Introduction

Introduction to Industrial Hygiene, Basic Laboratory Safety & Personal Protective equipment's (PPE). Risk & Risk Assessment, definition of Hazard and process of hazard identification, frequency and severity of Hazard, Occupational Health and Safety Administration, Safety and loss prevention, scope and outline of risk management. Legislation regarding process safety.

05 Hours

#### 2. Biological Hazards & Containment Levels

Classification of biological hazards, Major pathological mechanisms for health effects associated with hazardous biological agents, Biological Agents, major pathological mechanisms. Biosafety level: The BSL ranges from the lowest biosafety level-1 (BSL-1) to the highest at level-4 (BSL-4) based on the agents. Biohazard risk classification used by the World Health Organization. Bio-waste. Genetically Modified Organisms (GMO): requirements, or other Environmental safety regulations. Containment Levels: Containment requirements based on the assessment of potential biohazard, Biological safety cabinets (Class-I, Class-II& Class-III) to provide personnel & environmental protection, Biological safety cabinets for safety in Research & Manufacturing of Biological products.

10 Hours

#### Unit II

#### **3.**Chemical safety and Fire Safety

Toxicity and safe handling of materials. Identification Material Safety Data Sheet (MSDS), evaluating exposure to volatile toxicants. Industrial hygiene, Industrial Hygiene Regulations. Runaway Reactions. Nature of Accidents and major disasters. Some Case Studies: Bhopal Gas Tragedy, The Flixborough UK, Cyclohexane Disaster, Seveso Accident: July 10, 1976, etc.

Fire and Explosion, Work Place Hazards, Dangerous Substance, Fire triangle, Effective Ignition Source, Fire Extinguishers. Designs to prevent Fire and Explosion. General Design Methods to prevent Fire.

05 Hours

#### 4. Safe Handling Radioactive Materials/Radioactive Isotopes

Introduction to safe handling radioactive materials, Personal Protective Equipment and Clothing, Precautions for Using Radioactive Material, Radioactive Materials Safe Work Practices, Fume Hoods and Biosafety Cabinets, Good Laboratory Practices, Radiation Safety Committee (RSC). **05 Hours** 

#### FMCD2009 / 2.0

#### 5. Risk Assessment

Risk Management, evaluating and analyzing risks associated with those hazards, actions to eliminate the hazards, Risk Matrix, Acceptable risks and safety priorities, cost of saving a life, frequency of accidents, safety check lists, assessment of risks from complex plants, Action and Recommendation. Environmental hazards.

KLE Technological University Creating Value, Leveraging Knowledge

05 Hours

#### Unit III

#### 6. Hazard Identification and evaluation Techniques

Process for identifying hazards, Hazard Identification techniques such as HAZOP (Hazard and Operability Analysis): basic principles, explanation of guide words, procedures, critical examination of flowsheets, FMEA (Failure Modes and Effects Analysis), FTA (Fault Tree Analysis). Event Tree Analysis (ETA), Cause Consequence Analysis & Layer of Protection Analysis. What-If Analysis.

#### 05 Hours

#### 7. Process Safety Audit and Standards

Safety Audit: Key Elements of a Workplace Safety Audit, Safety Audit Checklist, Safety Audit Report, Industrial Process Safety standards: Laws & Regulations. Occupational Health Hazards. Occupational Safety and Health Administration (OSHA) and National Institute of Occupational Safety and Health (NIOSH), Toxic Substance and Control Act (TSCA).

05 Hours

#### Text Books:

- 1. Crowl D.A. and Louvar J.F., Chemical Process Safety: Fundamentals with Applications. 3<sup>rd</sup> Edition. Prentice Hall Publisher.
- 2. Lees F.P. Lee's Loss Prevention in Process industries: Hazard Identification, Assessment and control. 4<sup>th</sup> Edition.Sa Mannan Publisher.
- Chemical Process Safety: Fundamentals with Applications (International Series in the Physical and Chemical Engineering Sciences) Hardcover. 2011 by Daniel Crowl and Joseph Louvar. 3<sup>rd</sup> Edition. Pearson Prentice Hall Publisher.

- Chemical Process Safety: Fundamentals with Applications, 3e Paperback 1 January 2013 by Daniel A.Crowl and Joseph F. Louvar. 3rd Edition. Pearson Prentice Hall Publisher.
- **2.** What Went Wrong? Case Histories of Process Plant Disasters: How They Could Have Been Avoided. By Kletz T. 5th Edition. Butterworth-Heinemann Publisher.

Program: Biotechnology		Semester: VII
Course Title: Plant and A	nimal Biotechnology	Course Code:15EBTE403
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
Unit I		

#### 1. Introduction to plant tissue culture

Introduction and scope of plant tissue culture. Historical events in the development of plant tissue culture method. Practical applications and recent advances. Laboratory organization, Cell culture media and its components. Aseptic manipulation in plant tissue culture laboratory. . Ethical and Social issues related to development and release of transgenic plants with case studies – Bt Cotton.

#### 05 Hours

#### 2. Methods and Techniques in Plant tissue Culture.

Callus and suspension culture, Micropropagation, Protoplast culture & Somatic Hybridization, Anther & Ovary Culture, Somatic Embryogenesis, Embryo & Endosperm culture, Somaclonal variation Germplasm storage by cryopreservation – pretreatment for cryopreservation, freezing, thawing, plant growth and regeneration and applications.

#### 04 Hours

#### 3. Introduction to animal cell and tissue culture

History and Scope of Animal cell and Tissue culture, Advantages and Disadvantages of Cell culture, laboratory facilities for tissue culture. Culture media for cells and tissues. Laboratory layout, Essential equipment's and Consumable items, Aseptic Techniques- elements of aseptic environment and culturing vessels Types of tissue culture – Primary cultures and Cell lines maintenance of cell line cultures

#### 06Hours

#### Unit II

#### 4.Culture characterization and culture maintenance

Need for characterization, Parameters of Characterization, Cell Morphology, Confocal microscopy, DNA content analysis, Enzyme activity and Antigenic markers. Contamination in cell culture – sources, monitoring and eradication of contamination Cryopreservation and transportation.

#### FMCD2009 / 2.0

## **5.** Animal Cell culture Scale up and Automation Introduction to scale up and automation. Scale up in suspension culture: Continuous culture, Scale & complexities, Mixing & Aeration. Scale up in Monolayer culture: Multi surface propagators, Roller culture, Microcarriers, and Perfused Monolayer culture. Process control and Automation: Robotic cell culture and High throughput screening.

KLE Technological University | Creating Value, Leveraging Knowledge

#### 05 Hours

#### 6. Animal cell culture and Biopharmaceuticals production

Mammalian cells as desired expression systems for protein biopharmaceuticals, Construction and selection of high-producing cell lines, Medium development for mammalian cell culture, and Process development for mammalian cell culture. Single use disposable animal cell culture technologies for biopharmaceutical manufacturing.

06 Hours

#### Unit III

#### 7. Plant Cell culture and Secondary Metabolite production

Introduction, Selection of high yield cells and Mass cultivation of plant cells: Free cell suspension culture, Immobilized plant cell culture, and Two phase system culture. Elicitor induced accumulation of products. Biotransformation using plant cell cultures, Genetic modification and factors limiting large scale production of useful compounds.

05 Hours

#### 8. Animal cell culture applications and Tissue engineering

Hybridoma Technology and Animal cell culture applications in Monoclonal antibodies production. Products of Animal tissue culture – Erythropoietin, Tissue Plasminogen Activator & Factor VIII etc. Tissue Engineering – Introduction, Cell types, Extracellular matrix and Tissue engineering concepts. Artificial skin development by tissue engineering and its applications.

#### 05 Hours

1   1   1		

Unit I

#### **1. Introductory Genomics**

Genomics- Introduction, History and Scope and types, Structure of prokaryotic and eukaryotic genome, Mitochondrial and Chloroplast genome, C- value of genome. Genomics Approaches – traditional and updated, Genome mapping as an approach of genomics and recent approaches of genomics.

#### 04 Hours

#### 2. Genome Analysis and markers

Genome analysis and markers – Introduction, necessity and tools of genome analysis and markers. Genome Sequencing - Whole genome Shot gun, Hierarchial Shotgun, High-throughput sequencing, Chromosome walking, Chromosome jumping, Next Generation Sequencing. Molecular Markers: Concept of Markers, different types of markers and their general applications. Brief introduction to nature and applications of RFLP, RAPD, AFLP, SNP, Micro satellites, Minisatellites, Short Sequence Repeats, VNTR, EST, STS, Marker Assisted Selection

#### 07 Hours

#### 3. Genomics- Recent Advancements and Applications

Microarray analysis, Genomic libraries, Gene-disease associations. Genomics Applications: Nutrigenomics, Toxicogenomics, Pharmacogenomics, Metagenomics, Medical applications, Human Genome Project. Model Organisms for Genomics studies- Yeast and Drosophila

Unit II

04 Hours

#### **4. Introductory Proteomics**

Proteomics- Introduction, History, Scope and Types. Protein – Sequence, Structure and function relationship. Different approaches for proteomics studies and their applications.

#### 04 Hours

#### 5. Proteome separation and Purification

Proteome extraction and purification. Separation of Proteins- ion-exchange, size exclusion and affinity chromatography techniques, 1-D by Isoelectric focusing, 2-D by SDS-PAGE. Protein

# Identification- Edman degradation, Mass Spectrometry, MALDI-TOF, Electrospray ionization, Peptide mass fingerprinting.

#### 6. Proteomics- Recent Advancements and Applications

Applications of proteome analysis to drug; Protein-protein interaction Protein engineering: Protein chips. Clinical and biomedical application of proteomics.

#### Unit III

#### 7. Bioinformatics tools in Genomics

Raw genome sequences, Major Genomic Databases, Genome Annotation, similarity search, Genome sequence alignment tools.

#### 8. Bioinformatics tools in Proteomics

Proteome Databases, Proteome Annotation, Protein characterization and function, Families, patterns, domains and profiles.

05 Hours

05 Hours

1. Perceptions about Bio	otechnology: Biotechnology and	social responsibility, Positive &

Semester: VII

**1. Perceptions about Biotechnology**: Biotechnology and social responsibility, Positive & negative perceptions of Biotechnology, Public acceptance issues, surveys, areas of public concern for Biotechnology. Socio, ethical, economic and legal aspects of Biotechnology. Public education & Biotechnology.

#### 06 Hours

**2. Bioethics:** Legality, morality, and ethics, Principles of bioethics: autonomy, human rights, beneficence, justice, equity, etc. Expanding scope of ethics from Biomedical practice to Biotechnology, ethical conflicts in Biotechnology.

#### 05 Hours

**3.Biosafety concept and issues** : Rational vs. subjective perception of risks and benefits, Hazards of BT , relationship between risk and hazard, Ethical implications of biotechnology products and techniques,

#### 05 Hours

#### Unit II

**4. National and International Regulations:** Cartagena protocol, OECD consensus documents and Codex Alimentarius; Indian regulations – EPA act and rules, guidance documents, regulatory framework – RCGM, GEAC, IBSC and other regulatory bodies; category of rDNA experiments; field trails – biosafety research trials – standard operating procedures - guidelines of state governments; GM labeling – Food Safety and Standards Authority of India (FSSAI)

#### 10 Hours

5. Biosafety & Management: Laboratory associated Biosafety practices, assessment of biohazard, Biosafety levels,. Risk analysis and assessment, Containment levels-physical, biological containments,. Good manufacturing practice and Good lab practices (GMP and GLP).
 05 Hours

KLE Technological University Creating Value, Leveraging Knowledge

#### Unit III

**6. Intellectual Property rights**: Introduction to history of GATT, WTO, WIPO and TRIPS; Introduction to IPR, Types of IP: Patents, Trademarks, Copyright, Design & Related Rights. Plant variety protection, Traditional knowledge, breeders rights, Geographical indications, Biodiversity and farmers rights. Patenting in biotechnology, case studies.

#### 05 Hours

**7.Food, Agri and Pharma Sector:** The GM-food debate and biosafety assessment procedures for biotech foods including transgenic food crops, case studies- Golden Rice and Flav Savr Tomatto. Biosafety assessment of pharmaceutical products such as drugs/vaccines etc. Biosafety issues in Clinical Trials.

**05 Hours** 

#### Text Books:

Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
l Init I		

#### **1** History of Vaccine Discovery and Development

Variolation and Vaccination in Late Imperial era, early methods of vaccination, Edward Jenner's Role in the Introduction of Smallpox Vaccine, Eradication of small pox. Fight against polio, Historical background of vaccination, vaccine preventable infectious diseases, Over view of bacterial and viral vaccines and their importance to public health. Epidemiology and pathophysiology of vaccine preventable diseases with special emphasis on Diphtheria, and Tetanus.

#### 07 Hours

#### 2. Role of vaccines in epidemiology and public health system.

Active and passive immunization, General immunization practices, Strategies for improving vaccination levels. Timing and Spacing of Vaccines.. Adverse Reactions Following Vaccination. Contraindications and Precautions to Vaccination. Role of B and T cells, primary and secondary immune response, Immunological memory, Booster doses, Factors influencing the magnitude of vaccine performance, adjuvants. Immune correlates in vaccine development.

#### **08 Hours**

#### Unit II

#### 3. Vaccine design, development and types:

Subunit vaccine component - antigen, delivery system. Structure-based Vaccine design - tools and techniques. Characters of effective vaccines: Vaccines, Live, killed, attenuated, sub unit vaccines, conjugated vaccines. Vaccine technology- Role and properties of adjuvants, recombinant DNA and protein based vaccines, plant-based vaccines, reverse vaccinology; Peptide vaccines, conjugate vaccines, Edible vaccines.

#### 06 Hours

#### 4. Vaccine manufacturing and Quality Control.

Commercial scale vaccine manufacturing: Upstream (use of cell lines, human diploid) and downstream (chromatography) of active substances. Vaccine formulation (liquid and lyophilization). Use of additives/adjuvants/stabilizers. Vaccine safety and efficacy of vaccines (in vitro and in vivo). cGMP implementation in the production of safe vaccines. Case study of vaccine manufacturing: HBV and polio vaccine **09 Hours** 

#### KLE Technological University Creating Value, Leveraging Knowledge

ai+ III

#### 5. Policies, ethical considerations and Regulatory affairs of vaccines.

Regulation and testing of vaccines, Regulation of vaccines in developing countries, Role and functioning of National Regulatory Authorities (ICMR) and WHO .Different stages of review and regulation of vaccines (investigational new drug application, biologics license application, post-licensure). Evolution of vaccine regulations overtime and the current status of NRAs functionality globally. Brief on Indian regulatory system.

#### 05 Hours

#### 6. Recent advancements in vaccinology:

Concepts of reverse vaccinology, case study of Reverse Vaccinology. Novel vaccine delivery systems. Tools & servers for computational Vaccine design-from Genome to Vaccine. Antigenicity modification, epitope replacement, germline targeting. Antigenically variable infectious agents and their vaccines.

05 Hours

#### Text Books:

- 1. IAP Textbook of Vaccines by Nitin K Shah, Rohit Agrawal, Vipin M Vashishtha, TU Sukumaran
- 2. Vaccines. 6th Edition, Stanley Plotkin Walter Orenstein Paul Offit.

- 1. Vaccine Development and Manufacturing. Emily P. Wen (Editor), Ronald Ellis (Editor), Narahari S. Pujar (Editor).
- 2. Vaccines & Vaccine Technologies. Jose Ronnie Vasconcelos

#### Text Books:

 Culture of Animal Cells: A Manual of Basic Technique and Specialized Applications, R. lan

Freshne, John Wiley & Sons, 2016, Seventh edition.

2. Animal Cell Culture - Practical Approach, Ed. John R.W. Masters, OXFORD, Third edition,

2000.

#### **Program: Biotechnology** Semester: VIII **Course Title: Biological Data Analysis** Course Code:18EBTE402 L-T-P:: 3-0-0 Credits:3.0 **Contact Hours: 03** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:40 Examination Duration: 3 Hours**

KLE Technological University Creating Value, Leveraging Knowledge

Unit I

#### **1.Introduction to Basic statistics:**

Strategy of Experimentation, History of the Design of Experiments, Basic Principles of DOE: Randomization, Replication, Blocking, Multi-factor Designs, Confounding; Steps for Planning, Conducting and Analyzing an Experiment, Typical applications of Experimental design, Basic Principles, Guidelines for Designing, Concepts of random variable, probability, density function, cumulative distribution function. Concept of confidence level. Statistical Distributions: Normal, Log Normal & Weibull distributions. Hypothesis testing, Probability plots.

#### 2. Screening Design:

Introduction, Terminology: factors, levels, interactions, treatment combination, Orthogonal array, PB design, analysis of PD design, Numericals.

#### **3.Full Factorial Design:**

Basic Definitions and Principles, The Advantage of Factorials, The Two-Factor Factorial Design, Statistical Analysis of the Fixed Effects Model, Model Adequacy Checking, Estimating the Model Parameters, Concept of the General Factorial Design, 2<sup>k</sup> Factorial Design, The 2<sup>2</sup>Design, The 2<sup>3</sup> Design, The General 2<sup>k</sup> Design.

#### Unit II

#### 4. Response surface methods:

Introduction, Central composite design, Box Behnken design, importance of counter and surface plots.

#### 5. R Programming Basics:

Overview of R programming, Environment setup with R Studio, R Commands, Variables and Data Types, Control Structures, Vectors, Factors, Functions, Matrices, Arrays and Lists.

06 Hours

05 Hours

#### 6. Interfacing:

Interfacing R to other languages, Parallel R, Basic Statistics: Linear Model, Generalized Linear Models, Non-linear models, Time Series, Autocorrelation and Clustering.

#### 05 Hours

## 07 Hours

04 Hours

#### KLE Technological University Creating Value, Leveraging Knowledge

#### Unit III

#### 7. Introduction to Bioconductor for Sequence Data:

Sequencing Resources, Ranges Infrastructure, DNA /amino acid sequence from FASTA files, Reads from FASTQ files, Aligned Reads from BAM files, Called Variants from VCF files, Genome Annotations from BED, WIG, GTF files.

#### 04 Hours

#### 8. Biological Data Analysis:

Preparing count matrices, The DESeq, DataSet, sample information, and formula design, exploratory analysis and visualization, Differential expression analysis, Plotting results, Annotating and exporting results

04 Hours

#### Text Books:

- 1. R for Everyone: Advanced Analytics and Graphics: b y Jared P. Lander Addison Wesley Data & Analytics Series, 2013.
- 2. Design and analysis of experiments" by D.C. Montgomery, 7th edition John Wiley and sons, New York

- 1. A Little Book of R for Bioinformatics: by Avril Coghlan, Release 0.1
- 2. Das. M.M. and Giri N.C. : Design and Analysis of Experiments

#### L-T-P:: 3-0-0 Credits:3.0 **Contact Hours: 03** ISA Marks:50 ESA Marks:50 Total Marks:100 **Teaching Hours:40 Examination Duration: 3 Hours** Unit I 1.Introduction to Genomics and Data science:

Genomics- Introduction, Structure of prokaryotic and eukaryotic genome, Central dogma, Genome analysis- Introduction, necessity and tools of genome analysis Genome Sequencing methods, Next Generation Sequencing, Introduction to Data Science: Data, Information, Data science, Data science process, Data analytics process, exploratory data analysis, data types and plotting.

## 2. Python for genomic data science:Part I

**Program: Biotechnology** 

**Course Title:** Genomic Data Analysis

Introduction, Installation, Jupyter note book, types and sequence, python numbers and strings, variables, handling numerical data, python objects, data structure.

Unit II

## 3. Python for genomic data science:Part II

Ifs and loops, python functions, library, communication with outside, modules and package.

## 4. Genomic analysis: Algorithms

Introduction, DNA as string, manipulation of DNA, Dynamic programming: Local and Global alignment, BLAST algorithm, DNA assembly.

05 Hours

#### 5. Biopython

Introduction, working with sequence, sequence objects, sequence alignment, reading genomic sequence files.

05 Hours

0	<b>KLE Techn</b>	ological
KLE TECH	University	Creating Value, Leveraging Knowledge

Semester: VIII

Course Code:21EBTE402

**10 Hours** 

05 Hours

05 Hours

139

#### KLE Technological University Creating Value. Leveraging Knowledge

Unit III

#### 6. Introduction to Galaxy software

Introduction, galaxy platform, working with genomic data, creation of work flow, annotation, sharing and publishing of genomic data, Genome and RNA sequence analysis.

**05 Hours** 

#### 7. Introduction to Bioconductor for Sequence Data

Sequencing Resources, Ranges Infrastructure, DNA /amino acid sequence from FASTA files, Reads from FASTQ files, Aligned Reads from BAM files, Called Variants from VCF files, Genome Annotations from BED, WIG, GTF files.

05 Hours

#### Text Books:

- 1. Bioinformatics with Python Cookbook, Second Edition: Tiago Antao, Ingram short title; 2nd edition (1 January 2018), ISBN-13 : 978-1789344691.
- 2. R Bioinformatics Cookbook, Dan MacLean, Packt Publishing Limited (11 October 2019), ISBN-13 : 978-1789950694.
- 3. Hahne F, Huber W, Gentleman R, Falcon S. Bioconductor Case Studies. Springer Publishing Company, 2008. Mathur SK.

#### **Reference Books:**

1. Lee JK. Statistical Bioinformatics: A Guide for Life and Biomedical Science Researchers.

Hoboken, N.J.: WileyBlackwell, 2010.

- 2. Statistical Bioinformatics with R. Academic Press, 2010.
- 3. Genome Data Analysis, Ju Han Kim, 2019, Springer Singapore

Program: Biotechnology		Semester: VIII		
Course Title: Bio-business & Entrepreneurship		Course Code:20EBTE402		
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03		
ISA Marks:50	ESA Marks:50	Total Marks:100		
Teaching Hours:40	Examination Duration: 3			
	Hours			

#### Unit-I

#### 1. Entrepreneurship

Concept of Entrepreneurship - Development of Entrepreneurship; Stages in entrepreneurial process; Role of entrepreneurs in Economic Development; Characteristics of successful Entrepreneur, Classification of Entrepreneurs, Myths of Entrepreneurship, Entrepreneurial Development models, Entrepreneurial development cycle, Problems faced by Entrepreneurs. Entrepreneurship in India: Small scale industries: Definition; Characteristics; Need and rationale. Objectives; Scope; Introduction to bio-business, from the Indian context, SWOT analysis of bio-business.

#### **10 Hours**

**05 Hours** 

#### 2. Social Responsibilities of Business

Meaning of Social Responsibility, Social Responsibilities of Business towards Different Groups, Social Audit, Business Ethics and Corporate Governance Institutional Support for Business Enterprises: Introduction, Policies & Schemes of Central Level Institutions, State Level Institutions.

#### Unit-II

#### 3. Entrepreneurship opportunity in biotechnology

Business opportunity, Essential requirement, marketing strategies, schemes, challenges and scope-with case studies on entrepreneurship opportunities in different domains of Biotechnology (Agri biotechnology, industrial Biotechnology, food biotechnology, Biopharma, Nutraceuticals. etc).

#### 05 Hours

#### 4. Project management, technology management and startup schemes

Meaning of Project; Project Identification; Project Selection; Project Report; Need and Significance of Report; Contents; Formulation; Guidelines by Planning Commission for Project report; Network Analysis; Errors of Project Report; Project Appraisal. Identification of business opportunities: Market Feasibility Study; Technical Feasibility Study; Financial Feasibility Study & Social Feasibility Study.

#### Unit-III

#### 5. Startup Schemes

Building Biotech business challenges in Indian context-biotech partners (BIRAC, DBT, Incubation centers. Etc.), operational biotech parks in India. Indian Company act for Bio business-schemes and subsidies. Patent expiry and Entrepreneurship opportunity, Principles of Technology leasing, licensing and transfer, Business incubation support schemes, Successful startups-case study.

#### 05 Hours

#### 6. Funding Opportunities

Startup schemes in Indian government Sources of Funding for startups. Crowd funding, Selffunding, Venture Capitalists, Angel Investment. Banking support for startup business. Types of companies: Sole proprietorship company, Partnership company, Private Limited, Limited company etc.

#### 05 Hours

#### Text Books:

- 1. Principles of Management P. C. Tripathi, P.N. Reddy Tata McGraw Hill,
- 2. Entrepreneurship Development S.S.Khanka S.Chand & Co.
- **3.** Project Management by Sahni, Ane Books.

- 1. Management Fundamentals Concepts, Application, Skill Development Robers Lusier - Thomson
- 2. Project Management for Business & Technology, Nicholas, PHI.

Program: Biotechnology		Semester: VIII		
<b>Course Title: Phytochemicals and Herbal Products</b>		Course Code:22EBTE403		
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03		
ISA Marks:50	ESA Marks:50	Total Marks:100

linit i				

#### **1.** Crude Drugs, Medicinal and Aromatic Plants

Crude Drugs - Scope and Importance, Classification (Taxonomical, Morphological Chemical, Pharmacological); Collection and processing of Crude Drugs; Utilization of Medicinal and Aromatic Plants in India and world; Genetics as applied to Medicinal herbs; Biogenesis of Phytopharmaceuticals.

#### 07 Hours

#### 2. Types of Phytochemicals

Carbohydrates and its derived products- Structures, types and extraction methods : Glycosides - Digitalis, Aloe, Dioscorea; Volatile Oils - Clove, Pippermint Oil; Alkaloids – classification and functions, Triterpenoids, Phenols, Quinines, Cinchona; Flavonoids-and Resins; Tannins (Hydrolysable and Condensed types). Application of phytochemicals in industry and healthcare; Antioxidants, Biocides, Biofungicides, Biopesticides. Case studies

**08 Hours** 

#### Unit II

#### **3.** Analysis of Phytochemicals

Methods of Drug evaluation (Morphological, Microscopic, Physical and Chemical); Preliminary screening, Assay of Drugs - Biological evaluation / assays, Microbiological methods, Chemical Methods of Analysis and Detection of Adulterants: Chemical estimations; Drug adulteration - Types of adulterants.

07 Hours

#### 4. Techniques for Extraction and characterization of phytochemicals

Extraction and characterization techniques, Cold extraction, hot extraction, Soxhlet apparatus, Solvents: Petroleum ether, chloroform, ethanol, water, Separation techniques: TLC, colum, HPLC, Characterization techniques: UV spectra, IR specta, GC/MS, HPTLC.

#### KLE Technological University Creating Value, Leveraging Knowledge

Unit III

#### 5. Herbal Products and regulation

History, Scope, and Current aspects of herbs and herbal medicines; Preparation of standardized extracts of Garcinea, Forskolin, Garlic, Turmeric and Capsicum, issues of licensing of herbal drugs. Herbal drug standardization: Regulatory bodies and guidelines, WHO and AYUSH guidelines.

#### 05 Hours

#### 6. Herbal Informatics

Applications of informatics in Herbal medicine, Databases and Tools for listing of phytochemicals and their applications. Databases: Super Natural II, CMAUP, BATMAN, ZINC, PubChem, ChEBI, KNApSAcK. Tools : Openbabel, Chemtools, ChemDraw, PkCSM. Molecular docking and analysis. Tools : MGL tools, Autodock Vina, PLIP. Network pharmacology and its application. Tools and Databases: Cytoscape, BindingDb.

#### 05 Hours

#### Text Books:

- 1. Shah B, Textbook of Pharmacognosy and Phytochemistry, 2<sup>nd</sup> edition, CBS publisher, 2019.
- Dr. Deep Panhekar, Ms. Trupti P. Sawant, Dr. D. P. Gogle, Phytochemicals Extraction, Separation & Analysis Techniques | Phytochemistry - Study of Plants | | Plant Physiology, Plant Biotechnology and Plant Pathology Book, Global Education Limited; First Edition, 2019.
- 3. John R Harrison, International Regulation of Natural Health Products, Universal Publishers, 2008.

- 1. R Amjesh, Bioinformatics in Drug Discovery from Medicinal Plants, LAP Lambert Academic Publishing, 2018.
- 2. Shao Li, Network Pharmacology Kindle Edition, Springer, 2021.

Program: Biotechnology		Semester: VIII
Course Title: Industrial Waste Management		Course Code:19EBTO401
L-T-P:: 3-0-0	Credits:3.0	Contact Hours: 03
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	<b>Examination Duration: 3 Hours</b>	
11.4.1		

#### Unit I

### 1 Introduction

Introduction to waste management, general outline of waste management, Importance of waste management in industries.

#### 04 Hours

## 2 Waste Water Treatment

Waste water characteristics: Physical, Chemical and Biological characteristics. Chemical Oxygen Demond (COD) and Biochemical Oxygen Demond (BOD). Introduction to physical and chemical waste water treatment methods. Biological wastewater treatment methods: Aerobic suspended growth treatment processes (Activated Sludge Process, aerared lagoons etc), Aerobic attached growth treatment processes (Trickling Filter). Anaerobic treatment.

11 Hours

#### Unit II

### 3. Solid Waste Management

Basic aspects, Generation of industrial solid wastes, general composition of Municipal solid waste, On site handling, storage and processing, Collection of solid wastes. Solid waste processing techniques and equipments. Recovery of biological conversion products from solid waste such as composting and anaerobic digestion. Disposal of solid wastes.

### **09 Hours**

### 4. Control of Air Pollution

Sources and classification of air pollutants, Effects of air pollution on human health, animals and plants. Sampling procedures, Control of air pollution by equipments, odour combaitment techniques, Air pollution Legislation and Regulation.

06 Hours

#### Unit III

# 5. Bioremediation

Introduction, Uses of bacteria for bioremediation, bioremediation of aromatic and aliphatic hydrocarbons, PCB dechlorination, immobilization techniques for bioremediation, biosorption

& bioaccumulation, genetic engineering of microbes for bioremediation. Phytoremediationplants capable of assimilating heavy metals.

KLE Technological University Creating Value, Leveraging Knowledge

05 Hours

## 6. EM Technology

Introduction, Important organisms: Photosynthetic bacteria, Lactobacillus, yeast; their roles, Formulation of EM Mixture, Use of EM technology for treating industrial wastes – case studies.

05 Hours

## Text Books:

- 1. Wastewater Engineering-Metcalf and Eddy. McGraw-Hill International Edition.1991
- 2. Solid Wastes-George Tchobanoglous, Hilary Theisen and Rolf Eliassen. McGraw Hill Kogakusha,Ltd.

### **Reference Books:**

- 1. Basic Biotechnology by Colin Ratledge, Cambridge Pub. 2001
- 2. Air Pollution M.N.Rao and H.V.N Rao.Tata Mc Grew Hill.
