### Vision

KLE Technological University will be a national leader in Higher Education—recognised globally for innovative culture, outstanding student experience, research excellence and social impact.

### Mission

KLE Technological University is dedicated to teaching that meets highest standards of excellence, generation and application of new knowledge through research and creative endeavors.

The three-fold mission of the University is:

- To offer undergraduate and post-graduate programs with engaged and experiential learning environment enriched by high quality instruction that prepares students to succeed in their lives and professional careers.
- To enable and grow disciplinary and inter-disciplinary areas of research that build on present strengths and future opportunities aligning with areas of national strategic importance and priority.
- To actively engage in the Socio-economic development of the region by contributing our expertise, experience and leadership, to enhance competitiveness and quality of life.

As a unified community of faculty, staff and students, we work together with the spirit of collaboration and partnership to accomplish our mission.

## Vision and Mission Statements of the School / Department

### Vision

The KLE Tech – Department of Biotechnology will excel and lead in education, research and innovation in Biotechnology contributing to the evolving needs of the society.

### Mission

- To provide an excellent educational experience to undergraduate students of Biotechnology through quality teaching, relevant curriculum and effective research experience that enables students to become leaders in their chosen field.
- To provide scholarly, vibrant learning and research environment that enables to achieve personal and professional development.
- To cater to the societal needs and serve the communities at local, national and international levels combined with a deep awareness of ethical responsibilities to profession and society.

## Program Educational Objectives/Program Outcomes and Program-Specific Objectives

| <b>Program Educational Objectives -PEO's</b>  |
|---|
| Graduates will demonstrate peer- recognized technical competency in the analysis, design and development of solutions for Molecular Biotechnology and Bioprocess Engineering.   |
| Graduates will demonstrate leadership and initiative to advance professional and organizational goals with commitment to ethical standards of profession, teamwork and respect for diverse cultural background  |
| Graduates will be engaged in ongoing learning and professional development through pursuing higher education, and self-study  |
| Graduates will be committed to creative practice of engineering and other professions in a responsible manner contributing to the socio-economic development of the society   |
| <b>Program Outcomes-PO's</b>  |
| Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.  |
| Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.  |
| Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations. |
| Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.  |
| Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations  |
| Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.  |
| Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development  |
| Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.  |
| Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.   |

Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### ***Program Specific Objectives -PSO's***

Demonstrate adequate proficiency of good laboratory practices in terms of accuracy & precision, safety, ethics and reproducibility and able to follow standard operating procedures (SOP).

Demonstrate proficiency of Bioprocess Technology towards development of processes and products in global context.

Apply the knowledge of engineering & applied science to demonstrate research aptitude/skills in frontier areas of biotechnology.

## Curriculum Structure-Overall

| <b>Unit I</b>   |                                     |                              |
| <b>1.Functions, Graphs and Models</b>   |                                     |                              |
| Functions, types of functions, transformations and models (Linear, exponential, trigonometric).   |                                     |                              |
| <b>07 Hours</b>   |                                     |                              |
| <b>MATLAB:</b> Graphing functions, Domain-Range and Interpreting the models   |                                     |                              |
| <b>2. Calculus of functions and models</b>  |                                     |                              |
| Limit of a function, Infinite limits- graph, Continuity and discontinuity, Intermediate value theorem statement, Roots of the equation using Bisection Method and Newton- Raphson Method. Interpretation of derivative as a rate of change, All the rules of derivatives (List only), Maxima, Minima and optimization problems. Curvature and Radius of Curvature, Indeterminate forms, L- Hospital's rule-Examples |                                     |                              |
| <b>13 Hours</b>   |                                     |                              |
| <b>MATLAB:</b> optimization problems. Curvature problems  |                                     |                              |
| <b>Unit II</b>  |                                     |                              |
| <b>3. Infinite Series</b>   |                                     |                              |
| Definition, Convergence of series, Tests of convergence – p-series, Alternating series. Power series, radius of convergence, Taylor's and Maclaurin's series, Applications of Taylor's and Maclaurin's series   |                                     |                              |
| <b>06 Hours</b>   |                                     |                              |
| <b>MATLAB:</b> Convergence of series  |                                     |                              |
| <b>4. Integral calculus</b>   |                                     |                              |
| Tracing of standard curves in Cartesian form ,Parametric form and Polar form; Beta and gamma function, relation between them, evaluation of integrals using Beta and gamma functions; Applications to find arc length, Area, Volume and surface area (Cartesian, parametric and polar curves). Approximate integration- Trapezoidal rule, Simpson's $\frac{1}{3}$ rule  |                                     |                              |
| <b>14 Hours</b>   |                                     |                              |
| <b>MATLAB:</b> problems on arc length, area, volume and surface area  |                                     |                              |

### Unit III

#### 5. Ordinary differential equations of first order

(a) Introduction to Initial Value problems. Linear and Bernoulli's equations, Exact equations and reducible to exact form, Numerical solution to Initial Value problems-Euler's method, Modified Euler's method and Runge-Kutta method

(b) Applications of first order differential equations-Orthogonal trajectories growth and decay problems, mixture problems, Electrical circuits, falling bodies.

**10 Hours**

**MATLAB:** Solve differential equations

#### Text Books

1. Early Transcendentals Calculus- James Stewart, Thomson Books, 7ed 2010

#### Reference Books:

1. Calculus Single and Multivariable, Hughes-Hallett Gleason, Wiley India Ed, 4ed, 2009.
2. Thomas Calculus, George B Thomas, Pearson India, 12ed, 2010

*(Use this template for all courses, semester wise)*

### Unit I

#### 1. Pure substances

Properties of pure substance (Steam), two property rule, T-H diagram, formation of steam at constant pressure. Different states of steam: Wet steam-dryness fraction, determination by separating-throttling calorimeter, Dry saturated steam, Superheated steam, thermodynamic parameters of steam, steam table, numerical problems.

T-V, P-V & P-T diagram of pure substance taking water as example. Triple point & critical point, sub-cooled point, Sub-cooled liquid, saturated liquid, mixture of saturated liquid & vapor, saturated vapor & superheated vapor states.

**08 Hours**

#### 2. Real and ideal gases

Properties of Real and Ideal gases. Vander Waal's equation, Vander Waal's constant in terms of critical properties –numerical problems. Compressibility factor, compressibility chart and Law of corresponding state. Ideal gas: equation of state, internal energy and enthalpy as functions of temperature. Ideal gas mixture: Dalton's law of additive pressures and Amagat's law of additive volumes. Terms used in the analysis of mixture of gases - numerical problems.

**05 Hours**

#### 3. Engineering Materials

Ferrous metals – properties and applications of Iron and Steel. Ferrous metal s – properties and applications of copper and aluminium. Cement- properties, mechanism of setting & hardening of cement and applications. Lubricants- Properties –viscosity, flash point, fire point, cloud point and pour point, mechanism- hydrodynamic and boundary lubrication and applications.

**03 Hours**

### Unit II

#### 4. Fuel Chemistry

Fuels, classification, determination of calorific value of a fuel (solid / liquid fuel by Bomb calorimeter), coal analysis- Numerical problems. Petroleum - cracking, Octane number, Cetane number, reforming, and mechanism of knocking in Petrol and Diesel engines. Renewable energy

sources – power alcohol and bio diesel.

**06 Hours**

### 5. Energy Storage and Conversion Systems

Electrode potential, Nernst equation, Formation of a cell; Reference electrodes – Calomel electrode and Determination of electrode potential using calomel electrode, numerical problems on  $E$ ,  $E_{\text{cell}}$ ,  $E^0_{\text{cell}}$ .

Batteries: Classification, characteristics, Lead-acid and Li ion batteries.

Fuel cells: Methanol- $\text{O}_2$  fuel cell.

**06 Hours**

### 6. Surface Chemistry

Corrosion: Electrochemical theory of corrosion taking iron as an example; corrosion control – galvanization and tinning.

Metal Finishing: Technological importance of metal finishing, Electroplating, factors affecting nature of electrodeposit- Throwing power of plating bath solution- numerical problems. Electro lessplating – advantages over electroplating, electroless plating of copper and its applications in the manufacture of printed circuit board.

**04 Hours**

## Unit III

### 7. Polymers

Introduction, free radical mechanism of addition polymerization taking Ethylene as an example; commercial polymers - Plexi glass, polyurethane and polystyrene. Adhesives – synthesis, properties as applications of Epoxy resins; Polymer Composites - structure, properties and applications of Kevlar and carbon fiber.

**04 Hours**

### 8. Environmental Chemistry:

Water: Sources and ill effects of water pollutants- fluoride and nitrate; Determination of total hardness of water by EDTS method – numerical problems. Sewage: Determination of biological oxygen demand by Winkler's method – numerical problems and determination of chemical oxygen demand - numerical problems,

**0 Hours**

**Text Books:**

1. A text Book of Engineering Chemistry, 1st edition, Dara. S. S, S. Chand & Co. Ltd., 2009, New Delhi.
2. A text Book of Engineering Chemistry, 16th edition, Jain P.C and Jain M, Dhanpat Rai Publications, 2006, New Delhi.

**Reference Books:**

1. An introduction to Thermodynamics, Y V C Rao, Revised Edition, University Press, 2009 Hyderabad.
2. Hand book of batteries, David Linden, Thomas B Reddy, 3rd edition McGraw Hill publications, 2001.
3. Puri B. R., Sharma L.R. and Pathania M. S., Principles of Physical Chemistry, 33rd Edition, S Nagin Chand & Co., 1992.
4. Fontana M G, Corrosion Engineering, 3<sup>rd</sup> Edition, McGraw Hill Publications, 1986.
5. Billmeyer F W, Text Book of Polymer Science, John Wiley & Son's, 1994.
6. Principles of Polymer Chemistry- A. Ravve Plelum Press, New York and London.
7. Callister William D, Materials Science and Engineering: An introduction, John Wiley and Sons 2007: 721 pages.

### **1.Introduction to Problem solving**

Introduction to algorithms / flowcharts and its notations, top down design, elementary problems.

**03 Hours**

### **2.Basics of C programming language**

Characteristics and uses of C, Structure of C program, C Tokens: Keywords, Identifiers, Variables, Constants, Operators, Data-types, Input and Output statements.

**15 Hours**

### **3.Decision control statements**

Conditional branching statements: if statement, if else statement, else if ladder, switch statement, unconditional branching statements: break, continue.

Introduction to Debugging Skills

Introduction to Test Driven Programming.

**12 Hours**

### **4.Iterative statements**

while, do while, for, nested statements

**10 Hours**

### **5.Functions**

Introduction, Function declaration, definition, call, returns statement, passing parameters to functions, introduction to macros.

Introduction to Coding Standards

**10 Hours**

### **6.Arrays and Strings**

Introduction, Declaration, Accessing elements, Storing values in arrays, Operations on one dimensional array, Operations on two dimensional arrays, Introduction to Code Optimization and refactoring

**15 Hours**

## 7.Pointers

Introduction, declaring pointer, pointer variables, pointer expression and arithmetic, passing arguments to functions using pointers, pointers and arrays, passing an array to a function.

**08 Hours**

## 8.Structures and Unions

Introduction, passing structures to functions, Array of structures, Unions

**05 Hours**

| Ideal op-amp characteristics, op-amp applications: Comparator, Inverting amplifier, Non-inverting amplifier, Voltage follower, Integration, Differentiation, Adder, Subtractor and numerical as applicable.   |                                     |                              |
| <b>08 Hours</b>   |                                     |                              |

## Unit II

### Chapter 4: Digital Logic:

Digital Number system: Binary & Hexadecimal number systems, Conversion, BCD Number system, Gray code, Data word representation, Binary Arithmetic, Boolean Algebra, Logic gates, Combinational & Sequential circuits, Adders, Flip-Flops, Registers, Counters, Multiplexer.

#### Introduction to Digital Electronics (Text-2):

Introduction, Switching and Logic Levels using circuits, Digital Waveform (Sections 9.1 to 9.3). Number system: Binary, Octal, Decimal and Hexadecimal, Inter Conversion, BCD Number system, Gray code, Data word representation, Binary Arithmetic, Boolean Algebra: Laws, rules & theorems of Boolean algebra, Sum of products form (SOP), products of sum form (POS) of Boolean functions. Study of Karnaugh Maps (K-maps) for 2, 3 & 4 variables only. Logic gates, Adders, Encoder, Decoder, Multiplexer and Demultiplexer. Combinational & Sequential circuits, Latches and Flip-Flops (SR, JK, D, T),

**13 Hours**

### Chapter 5: Sensors and Transducers :

Introduction, Classification of sensors and transducers, Contact type – Mechanical switches, Non-contact type - proximity sensors & Hall sensors, principle of working of light sensors, Future Challenges.

**06 Hours**

## Unit III

### Chapter 6: Signal Conditioning:

Analog & Digital signals, Digital to Analog Conversion, R-2R DAC, Analog to Digital Conversion, SAR ADC, Data Acquisition.

**06 Hours**

### Chapter 7: Case Studies of Mechatronic Systems:

Automatic Camera, Drilling Machine, Bar code reader.

**06 Hours**

## Unit II

### Chapter 4:Dynamics I

Equilibrium using Newton's second Law, Friction, Drag,

Newton's Third Law, Analyzing Interacting Objects, Newton's Third Law, Applications.

**05 Hours**

### Chapter 5:Dynamics II

Motion in a plane, Dynamics in Two Dimension, Velocity and Acceleration in Uniform Circular Motion, Dynamics of Uniform Circular Motion, Fictitious Forces, Non-uniform Circular Motion, Numerical.

**06 Hours**

### Chapter 6:Impulse and Momentum

Momentum and Impulse, Problems, Conservation of Momentum, Inelastic Collisions, Explosion, Momentum in Two Dimension, Numericals.

**05 Hours**

## Unit III

### Chapter 7:Energy and Work

Energy: Kinetic Energy and Gravitational Potential Energy, Restoring Forces, Hooke's Law, Elastic Potential Energy, Elastic Collisions, Energy Diagrams,

Work: Work and Kinetic Energy, Force, Work and Potential energy, Conservation of Energy, Power, Numericals.

**08 Hours**

| <b>Unit I</b>   |                                     |                              |
| <p><b>Chapter 1: Overview of Civil Engineering</b><br/> <b>Evolution of Civil Engineering</b><br/> Specialization, scope and role.<br/> <b>Impact of Civil Engineering on</b><br/> National economy, environment and social &amp; cultural fabric.<br/> <b>Challenges and Opportunities for Civil Engineers</b><br/> Civil Engineering Marvels, Future challenges, Higher education and Research.</p> <p style="text-align: right;"><b>04 Hours</b></p> |                                     |                              |
| <p><b>Chapter 2: Coplanar concurrent force system</b><br/> <b>Introduction to Engineering Mechanics:</b><br/> Basic idealizations – Particle, Continuum, Body, Rigid body, Deformable body, Definition of force and its elements; Laws of Mechanics – Parallelogram law of forces, Principle of transmissibility, Law of Superposition, Newton’s laws of motion. Classification of force systems</p> <p style="text-align: right;"><b>03 Hours</b></p>  |                                     |                              |
| <p><b>Resultant of coplanar concurrent force system:</b> Definitions – Resultant, composition &amp; Resolution of a force, Equilibrium, Equilibrant, Formulae for resultant of forces and resolution of a force. Numerical problems on resultant of forces.</p> <p style="text-align: right;"><b>04 Hours</b></p>   |                                     |                              |
| <p><b>Equilibrium of coplanar concurrent force system:</b><br/> Conditions of equilibrium, Action &amp; Reaction, Free body diagram, Lamis’ theorem. Numerical problems on equilibrium of forces.</p> <p style="text-align: right;"><b>05 Hours</b></p>   |                                     |                              |

**Chapter 3: Coplanar non-concurrent force system**

**Resultant of a force system:** Moment, moment of a force, couple, moment of a couple, Characteristics of couple, Equivalent force-couple system, Numerical problems on moment of forces and couples, on equivalent force-couple system. Varignon's principle of moments, Resultant of coplanar- non-concurrent force systems and numerical problems. 5 hrs.

**05 Hours****Unit II****Chapter 4: Equilibrium of a force system ( Chapter 3 contd..)**

Conditions of equilibrium, types of support and loading for a statically determinate beam, Reactions at support connections, Numerical problems on equilibrium of force systems and support reactions for a statically determinate beam.

**05 Hours.****Chapter 5: Static Friction**

Introduction, types of friction, definition, limiting friction, coefficient of friction, laws of Coulomb friction, angle of friction and angle of repose, cone of friction. Wedge and belt friction theory. Derivation of belt friction formula. Numerical problems on, impending motion on horizontal and inclined planes (including connected bodies); wedge friction; Ladder friction and Belt friction.

**08 Hours****Chapter 6: Centroid of Plane Figures**

Introduction, Definition, Methods of determining the centroid, axis of reference, axis of symmetry, Locating the centroid of simple plane figures (triangle, semicircle, quarter of a circle and sector of a circle etc..) using method of integration, Numerical problems on Centroid of simple built up sections.

**05 Hours**

**Unit III****Chapter 7: Second moment of area (Plane figures)**

Introduction, Definition, Method of determining the second moment of area, Section Modulus, Radius of gyration, perpendicular and Parallel axis theorems, Polar second moment of area, second moment of area of simple plane figures (triangle, rectangle, semicircle, circle etc.,) using method of integration, Numerical problems on MI of simple built up sections.

**05 Hours****Chapter 8: Kinetics of a particle- Work, Power, Energy**

Introduction – Kinematics and Kinetics, Definitions – work, power and energy. Work done by a force (constant, gravitational and spring forces) in rectilinear motion. Numerical problems, Kinetic energy of a particle, principle of work and energy.

**06 Hours****Text Books:**

**Seven Mindsets:**

**1. Empathy**

(Example of The Boy and the Puppies)

**2. Optimism**

( Person Paralyzed waist down / Glass Half full Half Empty)

**3. Iteration**

(Thomas Alva Edison)

**4. Creative Confidence**

(Origami – Josef Albers)

**5. Making it**

**6. Embracing Ambiguity**

(Confusion is the Welcome doormat at the door of Creativity)

**7. Learning from Failure**

(Designing Website first and then asking the stakeholders about the website)

(Spending one lakh for the business which is never launched)

**Reading assignments**

- Handout on “ Create Mindsets”

- (How to train the Dragon?  
Common Video for all the mindsets)
- Watching in Class TED Talk on “How to build your Creative Confidence by David Kelley – IDEO Founder)

| <b>1. Interpolation techniques</b><br>Finite differences, Forward, Backward and central difference Operators. Newton Gregory forward and backward interpolation formulae. Stirling's formula for central difference. Newton's divided difference formula for unequal intervals.   |                                      |                              |
|   |                                      | <b>08 Hours</b>              |
| <b>2. Numerical Solution of Partial Differential Equations</b><br>Introduction, Classification of PDE, Parabolic, Elliptic and Hyperbolic Partial differential equations, Introduction to finite difference approximations to derivatives, finite difference solution of parabolic PDE, explicit and implicit methods, finite difference method to Elliptic PDE-initial –boundary value problems, Hyperbolic PDE-explicit method. Engineering problems: Temperature distribution in a heated plate, steady-state heat flow and vibration of a stretched string. |                                      |                              |
|   |                                      | <b>12 Hours</b>              |
| <b>Unit II</b>  |                                      |                              |
| <b>3. Matrices and System of linear equations</b><br>Introduction to system of linear equations, Elementary row transformations, Rank of a matrix, Consistency of system of linear equations, solution of system by (i) Direct methods-Gauss elimination, Gauss Jordan method (ii) Iterative method - Gauss-Seidel method. Eigen values and Eigenvectors of a matrix. Largest Eigen value and the corresponding Eigenvector by power method. Engineering problems.  |                                      |                              |
|   |                                      | <b>08 Hours</b>              |
| <b>4. Introduction to Statistics</b><br>Introduction, Scope of biostatistics, Variables, Measurement scales, Ordered array, Graphical representation of data: Bar Chart, Line chart, histogram, frequency curve, Ogive curves. Descriptive statistics: Measure of central tendency (arithmetic mean, median, mode, quartiles); Measures of dispersion (Quartile deviation, Standard deviation, coefficient of variation), Measure of skewness (Pearson and Bowley's)  |                                      |                              |
|   |                                      | <b>12 Hours</b>              |

**Unit III****5. Introduction to Laplace transform and Solution of Differential Equations**

Definition, transforms of elementary functions- transforms of derivatives and integrals- Properties. Periodic functions, Unit step functions and Unit impulse functions. Inverse Transforms- properties- Convolution Theorem. Applications to differential equations

**10 Hours****Text Books:**

1. Numerical methods for Engineers, Chapra S C and Canale R P, 5ed, TATA McGraw-Hill, 2007
2. Advanced Engineering Methods, Kreyszig E. 8Ed, John Wiley & sons, 2003. Applied Statistics and Probability for Engineers, Douglas Montgomery, George Runger, 6Ed, John Wiley, 2014

**Reference Books:**

| <p>Bright-field Microscopy, Dark-field Microscopy, Phase-contrast Microscopy, Fluorescence Microscopy and Electron Microscopy. Preparation of specimen for light and electron microscopy. Advances in Scanned Probe Microscopy, Scanning Tunneling Microscopy, Atomic Force Microscopy.</p>   |                                      |                               |
| <b>04 Hours</b>   |                                      |                               |
| <b>4. Microbial Growth</b>  |                                      |                               |
| <p>The requirements for growth (Physical &amp; Chemical requirements), Culture media &amp; their classification, Effect of different factors on growth, Growth of bacterial culture: bacterial division, generation time, phases of growth. Fundamentals of microbial growth Kinetics.Chemostat &amp; Turbidostat, Measurement of growth: Direct and Indirect methods.</p>  |                                      |                               |
| <b>04 Hours</b>   |                                      |                               |

## Unit II

### 5. Microbial Techniques

Pure culture techniques (streak plate, spread plate, pour plate), Staining techniques (simple and differential staining techniques), Enumeration techniques (Direct Microscopic Count, plating techniques, membrane filtration, Electronic enumeration, etc). Characterization: Phenotypic and Biochemical characterization. 16S rRNA gene homology.

**10 Hours**

### 6. Microbial Metabolism

Catabolic and Anabolic reactions, Energy production, Carbohydrate catabolism: Glycolysis, Alternatives to Glycolysis, Cellular respiration, Energy production by aerobic process, Energy production by anaerobic process, Energy production by photosynthesis, Mechanism of ATP synthesis. Lipid and Protein catabolism, Photosynthesis: Light dependent and light independent reactions. Metabolic diversity among microorganisms: autotrophs and heterotrophs. Metabolic pathways of energy use: Polysaccharide biosynthesis, lipid biosynthesis, amino acid and protein biosynthesis. The integration of metabolism. Utilization of Energy and Biosynthesis: Utilization of energy for biosynthetic and non-biosynthetic processes.

**10 Hours**

## Unit III

### 7. Control & Preservation of Microorganisms

Control of microorganisms by physical methods (heat, filtration, radiation). Microbial death kinetics, Thermal death point, Thermal death time, Decimal reduction time. Control of microorganisms by chemical methods (phenols, alcohols, halogens, dyes, detergents, heavy metals, etc), Common preservation techniques for microbes.

**05 Hours**

### 8. Applied and Industrial Microbiology

Food Microbiology, role of microorganisms in food production, Industrial Microbiology: Introduction to Fermenter & fermentation processes, Media for industrial application, Industrial Products: amino acids, vitamins, enzymes, pharmaceuticals, organic acids (discussion of case study), r-DNA technology & therapeutic products from microbes. Biosynthetic pathways and Introduction to Metabolic Engineering.

**05 Hours**

**Text Books:**

| <b>2. Lipids</b><br>Definition and classification of lipid – simple, compound and derived lipids. Structure, classification and properties of fatty acids, Essential and non-essential fatty acid with physiological importance. Structure and physiological functions of phospholipids, Sphingolipids, cerebroside and gangliosides. Steroids- Structure and functions of cholesterol,. Eicosanoids, lipoproteins and terpenes. Vitamins-classifications and functions   |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>3. Amino acids and Proteins</b><br>Definition, Classification and properties of amino acids, reactions, rare amino acids, essential and nonessential amino acids with physiological importance. Peptides - Definition of peptide bond, Biologically important peptides. Proteins – Classification- primary, secondary- Alpha helix, Beta sheets, tertiary and quaternary proteins-hemoglobin. Ramachandran plot, polypeptide sequencing- Edman degradation, Chemical synthesis of Peptides.  |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>4. Nucleic acids</b><br>Structure and properties of purines, pyrimidines, nucleosides and nucleotides. Nucleic acids- Structure of DNA, RNA -Types,  |                                      |                               |
|   |                                      | <b>03 Hours</b>               |
| <b>Unit II</b>  |                                      |                               |
| <b>5. Carbohydrate metabolism</b><br>Glycolysis-aerobic and in anaerobic pathway, Energy yield of glycolysis Regulation of glycolysis- metabolic and hormonal. Fates of pyruvate. Glycogen - synthesis and degradation. Regulation  |                                      |                               |

of glycogen metabolism. Gluconeogenesis, Pentose phosphate pathway. Significance of pentose phosphate pathway and regulation. Production of Acetyl-CoA, Reactions of Citric acid cycle, Anaplerotic reactions, regulation of citric acid cycle. Glyoxylate cycle, Electron transport chain, ATP synthesis, shuttle systems and Oxidative phosphorylation. Cyclic and Non-cyclic Photophosphorylation and Calvin Cycle (C3) in plants Disorders of carbohydrate metabolism. Production of microbial polysaccharides; industrial and Medical application of exopolysaccharides.

**10 Hours**

#### **6. Metabolism of Amino acids**

General reactions of amino acid metabolism, urea cycle, amino acid biosynthesis-aspartate and glutamate family and degradation of aromatic amino acid - phenylalanine and tyrosine, metabolic disorders of amino acid metabolism, biosynthesis of plant substances and neurotransmitters, Environmental and Industrial Significance of Amino acid metabolism.

**05 Hours**

#### **7. Metabolism of Fatty acids**

Fatty acid oxidation, biosynthesis of fatty acids, Ketone bodies, phospholipids and spingolipids cholesterol biosynthesis, Regulation, metabolic disorders of lipid metabolism. Environmental and Industrial Significance of lipid metabolism

**05 Hours**

### **Unit III**

#### **8. Metabolism of Nucleic acids**

Biosynthesis and degradation of purines and pyrimidines, salvage pathway, uric acid production, regulation, metabolic disorders of nucleic acid metabolism.

**05 Hours**

#### **9. Biological Membranes And Transport Mechanism**

Composition and functions of biological membranes (fluid mosaic model) – Proteins, Carbohydrates, Glycoprotein and glycolipids, Membrane transport - Passive transport and Active transport. Mechanism of Na<sup>+</sup> and K<sup>+</sup>, glucose and amino acid transport. Role of transport in signal transduction processes.

**05 Hours**

| General material balance equation, simplification for steady state without chemical reaction. Material balances of unsteady-state operation. Problems on mixing of streams, Distillation, Drying, Absorption, evaporation, Filtration, Extraction & Crystallization.   |                                      |                               |
| <b>08 Hours</b>  |                                      |                               |
| <b>Unit II</b>   |                                      |                               |
| <b>4.Material balances with chemical reaction</b>  |                                      |                               |
| Introduction, Concept of limiting, excess reactant and inerts. Conversion, yield and selectivity. Fuels and combustion-Definition of ultimate and proximate analysis of coal, air fuel ratio calculation. Problems.  |                                      |                               |
| <b>10 Hours</b>  |                                      |                               |
| <b>5.Energy Balance</b>  |                                      |                               |
| General steady state energy balance Equation.Thermopysics-Enthalpy, Heat capacities of solids, liquids and gases. Heat capacities of mixture, Thermo chemistry-Heat of combustion, formation and reaction. Effect of temperature on heat of reaction. Definition and significances of NCV and GCV and problems.        |                                      |                               |
| <b>10 Hours</b>  |                                      |                               |

### Unit III

#### **6a .Stoichiometry of microbial growth and product formation kinetics**

Introduction and definition of various yield coefficients. Elemental balances and Degree of reduction. Problems.

**05 Hours**

#### **6b .Stoichiometry of microbial growth and product formation kinetics**

Introduction and Basic cell kinetic models, Structured, unstructured and mixed growth kinetic models

**05 Hours**

#### **Text Books**

1. B.I Bhatt and S.M.Vora, Stoichiometry, Tata McGraw Hill publications, 4<sup>th</sup> edn, 2007.
2. David Himmelblau, Basic principles and calculation in chemical engineering, Pearson Education Limited, 6<sup>th</sup> edn, 2005

#### **Reference Books**

1. Hougen, Watson and Rigatz, Chemical Process principles Part-I , CBS Publishers & Distributors, 2<sup>nd</sup> edn, 2004.
2. J E Bailey and D F Ollis, Biochemical engineering Fundamentals, McGraw Hill Publication, 2<sup>nd</sup> edn, 1986.

| <b>L-T-P:: 3-0-0</b>  | <b>Credits:3.0</b>                   | <b>Contact Hours: 03</b>      |
| <b>ISA Marks:50</b>   | <b>ESA Marks:50</b>                  | <b>Total Marks:100</b>        |
| <b>Teaching Hours:40</b>  | <b>Examination Duration: 3 Hours</b> |                               |
| <b>Unit I</b>   |                                      |                               |
| <b>1. Basics of mass transfer</b><br>Introduction to Mass Transfer, Classification of mass transfer operations, Diffusion, Fick's law of diffusion, Vapour Liquid Equilibrium ( $T_{xy}$ & $x_y$ plots), Raoult's law, Relative volatility and its importance. Prediction of VLE data for binary mixture (Ideal system).  |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>2. Distillation</b><br>Types of distillation: simple/Batch distillation, Multi stage tray tower distillation, Packed column distillation & steam distillation. Determination of theoretical stages in multistage tray tower distillation column: Construction of equilibrium curve, Equations for operating lines of rectifying section & stripping section, Equation for feed line (q-line). Concept of Reflux ratio, Types of Refluxes: Total reflux, Minimum reflux & Optimum reflux. Conceptual numerical Problems on determination of number of theoretical stages. |                                      |                               |
|   |                                      | <b>10 Hours</b>               |
| <b>Unit II</b>  |                                      |                               |
| <b>3. Drying &amp; Crystallization:</b><br>Importance of Drying, Terminologies and definitions, Drying rate curves under constant drying conditions, Drying Equipments: Tray dryer, Freeze dryer/Lyophilizer, spray dryer etc. <i>Crystallization</i> : Concept of Crystallization, Principle and Applications  |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>4. Extraction</b><br>Introduction, Liquid-Liquid & Solid-Liquid Extraction Principles, selection of solvents. Batch and Continuous Extraction. Extraction Processes: Aqueous two phase Extraction, Super critical Fluid extraction.  |                                      |                               |
|   |                                      | <b>04 Hours</b>               |
| <b>5. Adsorption</b><br>Concept of Adsorption, Types of Adsorption, Adsorption Isotherms, Applications of Adsorption in Chromatography.   |                                      |                               |
|   |                                      | <b>03 Hours</b>               |

## 6. Heat transfer

Heat transfer: Introduction, Modes of heat transfer: conduction, convection and radiation. Conduction: Fourier's law of heat conduction, Thermal conductivity. Steady state heat conduction through unilayer and multilayer plain wall, Unilayer & multilayer Cylindrical pipe. Conceptual problems.

**04 Hours**

### Unit III

## 7. Convective heat transfer & Heat transfer equipment's

Forced and natural convection, individual and overall heat transfer coefficient, Correlation for  $h$  and  $U$  for the flow in circular tubes and annulus. Calculation of  $h$  (film heat transfer coefficient) based on dimensionless number, Concept of Log Mean Temperature Difference (LMTD). Typical heat transfer equipments: Double pipe heat exchanger, Shell and tube heat exchanger. (Line diagram and operation).

**05 Hours**

## 8. Condensation & Boiling

Condensation: Drop wise & Film wise condensation. Boiling: Phenomenon, different regimes of Boiling (descriptive only). Insulation, Critical thickness of Insulation.

**05 Hours**

| <b>Teaching Hours:40</b>  | <b>Examination Duration: 3 Hours</b> |                               |
| <b>Unit I</b>   |                                      |                               |
| <b>1. Immune system</b><br>History and Scope of Immunology and Immune system, Classification of Immune system, Types of Immune responses, Molecules ,Cells and Organs of Immune system and Anatomy of immune response.  |                                      |                               |
|   |                                      | <b>06 Hours</b>               |
| <b>2. Humoral Immunity</b><br>Overview of Humoral immunity, B- Lymphocytes – Development and their activation, Antibody response, Structure and functions of Immunoglobulins, Classes and sub-classes of immunoglobulins, genetic control of antibody production, Monoclonal and Polyclonal antibodies, Production of Monoclonal antibodies and quality screening processes in large scale monoclonal antibody production |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>3. Cell Mediated Immunity</b><br>Overview of cell mediated immunity and its significance, T-Lymphocytes – Development, Types and their activation, Major Histocompatibility (MHC) Complex, Antigen Presenting Cells (APC) and antigen processing and presentation, Mechanism of Phagocytosis- Oxygen dependent and Oxygen independent.   |                                      |                               |
|   |                                      | <b>04 Hours</b>               |
| <b>Unit II</b>  |                                      |                               |
| <b>4. Regulation of Immune Response and Immune tolerance</b><br>Immune response – Nature and necessity of its regulation, Complement System- Types, activation and types and their biological applications, Cytokines – types and their role in immune response, Immune Tolerance and their types, Hypersensitivity reactions – Types and Treatments. <b>Food allergy</b> , Case study on mechanism of immunity booster.  |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>5. Immunological disorders</b><br>Auto immune disorders – Features, important types and Experimental models of auto immune diseases Immunodeficiency Disorders – Types and features.   |                                      |                               |
|   |                                      | <b>04 Hours</b>               |

## 6. Transplantation immunology

Transplantation antigens – Types and functions, Types of Transplantations, Immunological basis of Graft rejection , and their disease association, Role of HLA in graft rejection, Tumor specific antigens, Tissue typing, Immune suppression and immune suppressive drugs.

**06 Hours**

### Unit III

## 7. Molecular Immunology

Vaccines – Types and their development, Production of Recombinant DNA vaccines, Application of PCR technology to produce antibodies, Immune Therapy with genetically engineered antibodies, Catalytic antibodies, immunotherapeutic applications of hematopoietic stem cells, Purification and preparation of antigens in vaccine development and Immunoinformatics.

**06 Hours**

## 8. Immunodiagnosis

Immunization and Antiserum, Antigen-Antibody interactions – Precipitation reactions and Agglutination reactions Immuno-electrophoresis and Immunofluorescence assay, Principle and applications of ELISA and RIA and Western blotting analysis.

**04 Hours**

| <b>Course Title: Enzyme Technology</b>  |                                      | <b>Course Code: 17EBTC201</b> |
| <b>L-T-P:: 4-0-0</b>  | <b>Credits:4.0</b>                   | <b>Contact Hours: 04</b>      |
| <b>ISA Marks:50</b>   | <b>ESA Marks:50</b>                  | <b>Total Marks:100</b>        |
| <b>Teaching Hours:50</b>  | <b>Examination Duration: 3 Hours</b> |                               |
| <b>Unit I</b>   |                                      |                               |
| <b>1. Introduction to enzymes</b><br>History, nomenclature, classification of enzymes, sources of enzymes, properties of enzyme, Types of specificities, mechanism of enzyme action-Lock and Key model and Induced fit model, Enzyme catalysis -Acid base catalysis, covalent catalysis, metal ion catalysis, Proximity and orientation effects. Mechanism of coenzymes (NAD/NADP,FAD/FADH <sub>2</sub> ,PLP, Coenzyme A, TPP, Biotin)  |                                      |                               |
|   |                                      | <b>07 Hours</b>               |
| <b>2. Purification of enzymes</b><br>Objectives and strategies in enzyme purification, choice of source-plant, animal and microbial, purification of intracellular and extracellular enzymes (Comprehensive flow sheet for enzyme purification),methods of homogenization, methods of separation-Enzyme fractionation by precipitation (using Temperature, salt, solvent, pH, etc.), liquid-liquid extraction, ionic exchange, gel chromatography, affinity chromatography and other special purification methods., Methods of characterization of enzymes; Analysis of yield, purity and activity of enzymes. Molecular weight determination-SDS-PAGE, MALDI-TOF |                                      |                               |
|   |                                      | <b>08 Hours</b>               |
| <b>3. Enzymatic techniques</b><br>Enzyme assay, Enzyme and isoenzyme measurement methods with examples(fixed incubation and kinetic methods) Methods for investigating the kinetics of Enzyme catalyzed reactions-Initial velocity studies, rapid-reaction techniques, Standardization and optimization methods, stability and activity of enzymes  |                                      |                               |
|   |                                      | <b>05 Hours</b>               |
| <b>Unit II</b>  |                                      |                               |
| <b>4. Enzyme Kinetics and Enzyme Inhibitions.</b><br>Kinetics of single substrate reactions; Derivation of Michaelis -Menten equation, turnover number; K <sub>cat</sub> value, determination of Km and Vmax, Line Weaver Burk plot, Eadie Hofstee plot, Hanes woolf plot, Importance of Km & Vmax; Enzyme inhibitions- reversible, competitive, uncompetitive and non-competitive inhibitions and kinetics, allosteric and irreversible inhibition. Substrate inhibitions, Multi-substrate reactions-ordered mechanisms, random  |                                      |                               |

mechanisms, Ping-pong mechanism. Allosteric enzymes and regulation - The Monod - Changeux - Wyman model (MCW) and The Koshland - Nemethy - Filmer (KNF) model, Feedback regulation and covalent regulation.

**07 Hours**

### **5. Enzymes Of Medical Importance**

Acetylcholinesterase, angiotensin converting enzyme (ACE), ACE Inhibitors, HMG Co A reductase inhibitors, pseudocholinesterase, 5'-nucleotidase (5NT), glucose-6-phosphate dehydrogenase (GPD), CKisoforms, immunoreactive trypsinogen (IRT) and chymotrypsin; amylase isoenzymes. Importance of enzymes in diagnostics, Enzyme pattern in diseases like Myocardial infarctions, (SGOT, SGPT & LDH). Isoenzymes (CK, LD, ALP). Enzymes in immunoassay techniques, Therapeutic enzymes.

**07 Hours**

### **6. Enzyme Immobilization**

Techniques of enzyme immobilization, adsorption - matrix entrapment- encapsulation- cross-linking - covalent binding - examples; whole cell immobilization and their application, kinetics of immobilized enzymes, effect of solute, partition & diffusion on the kinetics of immobilized enzymes, uses of immobilized enzymes, Design of Immobilized Enzyme Reactors- Stirred tank reactors (STR), Continuous Flow Stirred Tank Reactors (CSTR), Packed- bed reactors (PBR), Fluidized-bed Reactors (FBR); Membrane reactor

**06 Hours**

| <p>General features of Transcription process, Types of RNA molecules, Prokaryotic and eukaryotic RNA polymerases, Promoter structure and Mechanism of transcription in prokaryotes and eukaryotes, Post transcriptional modifications of mRNA, tRNA and rRNA, Transcription inhibitors.</p>   |                                      |                               |
| <b>05 Hours</b>   |                                      |                               |

## 5. Translation

Features of Genetic code and Wobble hypothesis, Overview of protein synthesis, Components required for protein synthesis, Mechanism of protein synthesis in prokaryotes and eukaryotes, Post-translational modifications and Protein targeting, Inhibitors in translation

**04 Hours**

## 6. Regulation of Gene Expression in Prokaryotes and Eukaryotes.

Regulation of gene activity, Gene regulation in Prokaryotes: Constitutive, Inducible and repressible gene expression systems, Operon model for gene expression regulation in prokaryotes, Positive and Negative regulation of – Lac Operon – Regulation, Catabolic repression and Gratuitous inducers etc, Trp Operon and Gal Operon. Gene regulation in Eukaryotes, Regulation of Gene expression at Genome level, Transcriptional level –Acetylation of Histones, Chromatin remodeling, DNA Methylation, DNA elements, Transcription factors, Insulators, Regulatory proteins and Hormones. Gene regulation at Post transcriptional level – Splicing, RNA interference, Transport of mRNA and by regulating mRNA stability.

**07 Hours**

## 7. Mutations and DNA Repair

Mutation – Source of genetic variability, basic features of Mutation process, Molecular basis of Mutation, Conditional lethal mutations as a powerful tool for genetic studies and Ames test of Mutagenicity testing. DNA damage and different types of DNA repair systems and Human diseases.

**04 Hours**

### Unit III

## 8. Polymerase Chain Reaction

Principle of polymerase chain reaction (PCR) - Components of PCR reaction and optimization of PCR. Primer design and types of PCR– Inverse PCR, Hot-start PCR, Loop mediated PCR -, Reverse transcription PCR and Real time PCR. Chemistry of primer synthesis.

**05 Hours**

## 9. Analysis of Gene Expression

Analyzing Transcription – Northern Blots, RNase protection assay, Reverse Transcription (RT) PCR and Primer extension assay. Transcriptome Analysis – Differential screening and Array based methods. Promoter activity study – Reporter genes and Run-On assays. Translational

Analysis – Western Blots and 2-D Analysis.

**05 Hours**

**Text Books**

1. Cell and Molecular Biology – S C Rastogi, New Age International Publishers, New Delhi (1996).
2. Fundamentals of Molecular Biology Ane's Student Edition. - Veer Bala Rastogi, Ane Books India, New Delhi (2008)

**Reference Books:**

1. Instant Notes in Molecular Biology – P.C. Turner, Viva Series Publishing, New Delhi
2. Essentials of Molecular Biology – V Malathi, Dorling Kindersley (India) Pvt Ltd, New Delhi (2013).

| <b>4. Transportation and metering of liquids</b><br>Pipe and tube, joints and fittings, valves—Diaphragm/pneumatic valve, pinch valve, ball valve, plug valve. Pumps: peristaltic pumps, sinusoidal pumps, single use diaphragm pumps. Characteristic curves of a pump, Measurement of fluid flow rates, venturimeter, rotameter, pitot tube, vortex-shedding meter, turbine meter, magnetic meters, ultrasonic meters, thermal meters. Numerical problems |                                      |                               |
|  |                                      | <b>08 Hours</b>               |
| <b>5. Mechanical separations</b><br>Filtration, Filter media, Filter aids, factors affecting rate of filtration, specific cake resistance, media resistance. Types of filters, Membrane processes—ultra filtration and microfiltration, Filtration equipment: rotary drum filter, leaf filter. Sedimentation, Kynch theory of sedimentation, Thickener, Numerical problems.  |                                      |                               |
|  |                                      | <b>07 Hours</b>               |

### Unit III

#### 6. Mixing and agitation of liquids

Mixing and Agitation, Flow patterns in agitated tanks, Mechanism of mixing, Estimation of mixing time, Types of Impellers & propellers, Standard turbine design, Numerical problems.

**05 Hours**

#### 7. Dimensional Analysis and similitude

Units and dimensions, Dimensionless number, Rayleigh and Buckingham  $\pi$  theorem. Model and prototype. Similitude. Problems on Rayleigh and Buckingham  $\pi$  theorem.

**05 Hours**

### Unit I

#### 1. Basics of Recombinant DNA technology

Development and Scope of Recombinant DNA Technology and Genetic Engineering. Emergence and commercialization of Molecular Biotechnology. Ethical, Social, Economical and Political issues related to Gene modification and Genetic Engineering. Gene Cloning: Introduction and Steps involved in gene cloning. Subcloning and its applications. Vectors in GE - biology, features, types, cloning & expression vectors

**06 Hours**

#### 2. Enzymes in Genetic Engineering

DNA modifying enzymes and necessity of DNA modification in gene cloning. Enzymes used for DNA modification. Restriction Endonucleases, classification & mode of action, Role and applications of different DNA modifying enzymes in gene cloning process - DNA Polymerases, Reverse Transcriptase, RNA Polymerase, Alkaline Phosphatases, Polynucleotide Kinase and DNA Ligases etc.

**05 Hours**

#### 3. Molecular Cloning Strategies and Genetic Transformation

Isolation and purification of nucleic acid (genomic/plasmid DNA and RNA), Quantification on and storage of nucleic acids, Construction of cDNA library, Construction of Genomic library, Screening and preservation of DNA libraries. DNA Cloning – Methods and applications. Genetic Transformation of prokaryotes and DNA Transfection in Eukaryotic hosts. Biological and Non-biological methods of gene transfer in hosts. Chloroplast transformation.

**09 Hours**

### Unit II

#### 4. Selection, Screening and Analysis of Recombinants

Introduction to screening and analysis of recombinants. Genetic selection and screening methods - Selectable Marker genes, Reporter genes. Screening using Nucleic acid hybridization methods - Preparation of probes for hybridization experiments and different blotting techniques. Screening by PCR based methods. Screening by Immunological methods

and Analysis of cloned genes.

**07 Hours**

### **5. Production of Proteins from Cloned Genes**

Introduction to recombinant gene expression, scope and applications of recombinant gene expression. Special vectors for expression of foreign genes in E coli. General problems with the production of recombinant protein in E coli. Production of recombinant proteins by Eukaryotic cells.

**07 Hours**

### **6. Directed Mutagenesis and Protein Engineering**

Oligonucleotide – Directed Mutagenesis with M13 DNA, Plasmid DNA, PCR Amplification etc. Protein Engineering – Meaning and Scope, Protein Engineering for adding disulphide bonds, increasing enzymatic activity, decreasing protease sensitivity, modifying protein specificity, Increasing enzyme stability and specificity etc.

**06 Hours**

## **Unit III**

### **7. Genetic Engineering and Microbial Biotechnology**

Genetic manipulation of Microorganisms – Introduction and scope. Applications of Recombinant Microorganism – Production of recombinant therapeutic proteins, Production of Antibiotics, Combating Human diseases, Microbial pesticides, EffilSant utilization of Carbohydrates and Bioremediation or Environmental cleanup.

**05 Hours**

### **8. Plant and Animal Transgenic Technology and Applications**

Applications of Transgenic Plant Technology – Development of Insect resistant plants, Herbicide resistant plants, Pathogens resistant plants, and Abiotic stress tolerant plants. Plants as Bioreactors for large scale production. Applications of Animal cloning and Transgenic technology - Cloning in Domestic animals. Applications of Transgenic Animals - as research models, and as bioreactors for large scale production of substances for Human welfare.

**05 Hours**

#### **Text Books:**

1. Genetic Engineering by Smitha Rastogi and Neelam Pathak, Oxford University Press, USA (2009)
2. Molecular Biotechnology – Principles and applications of Recombinant DNA by Bernard r Glick and Jack J Pasternak, ASM Press, American SoISAty for Microbiology, Washington DC 2003

**Reference Books:**

1. Gene Cloning and DNA Analysis by T A Brown. Wiley-Blackwell (2010)
2. An Introduction to Genetic Engineering – Third Edn By Desmond S T Nicholl, Cambridge University Press, Singapore 2008.

#### Unit - I

##### 1.Database

Bioinformatics: Definition, components, multidisciplinary nature, and applications of bioinformatics; Databases: Introduction, meaning, types and characteristics of databases, types of databases, Biological database: Classification, Primary Database: NCBI, Genbank, DDBJ, EMBL. File formats, Secondary Database: PROSITE, PIR, UNIPROT, BLOCKS, Pfam; metabolic pathway database: KEGG, Structure Database: PDB, MMBD, CATH, SCOP; Ligand Database, Enzyme database, human disease database, microbial and viral genome database, structure visualization tools.

**07 Hours**

##### 2.Pairwise Sequence Alignment

Pairwise sequence alignment: Definition, significance, and applications; Types of pairwise sequence alignment: Local and Global alignment; Methods of pairwise sequence alignment: Dot matrix, Dynamic programming: features of dynamic programming, Global Alignment: Needleman & Wunsch Algorithm, Local Alignment: Smith – Waterman Algorithm, and Word method: BLAST, PSI-BLAST, PHI-BLAST and FASTA; Substitution matrices: PAM and BLOSUM; gap penalties.

**08 Hours**

##### 3.Multiple Sequence Alignment

Multiple Sequence Alignment: Meaning, significance, and applications; Methods of MSA: Progressive Alignment methods, Iterative methods, Local Multiple sequence Alignment: Profile Analysis, BLOCK analysis, Pattern searching and Motif analysis, Statistical methods or Probabilistic models; Multiple Sequence Alignment editors.

**05 Hours**

#### Unit - II

##### 4.Phylogenetics analysis

Phylogenetic analysis: Meaning and significance; Concepts of evolutionary trees: Tree terminology, types of phylogenetic trees; fundamentals of phylogenetic models, Phylogenetic Data Analysis: Alignment: Building the data model, and extraction of phylogenetic data set; Determining substitution models: Models of Substitution Rates Between Bases, Models of Among-Site Substitution Rate Heterogeneity, Models of Substitution Rates Between Amino

Acids; Tree Building methods: Distance based methods: Neighbor Joining (NJ) method, Fitch-Margoliash (FM) method; Character based methods: Maximum parsimony, Maximum Likelihood; Tree Evaluation methods, Phylogenetic Softwares

**07 Hours**

### **5. Gene Prediction**

Gene structure, Prokaryote and Eukaryote gene prediction, Prokaryote and Eukaryote promoter site prediction Gene Prediction tools, Genomic database, Next Generation Sequencing.

**05 Hours**

### **6. Protein Prediction**

Protein structures: Secondary Structure: Alpha helix, beta Sheets, phi & psi angles, Ramachandran plots. Protein Structure Prediction: Use of sequence patterns and Amino acid; Protein Secondary Structure Prediction methods: Chou-Fasman, neural network, and nearest neighbor method; Tertiary Structure Predictions: Homology modeling; Protein sequence and structure analysis: Physicochemical parameters, binding site, sub-cellular location, protein stability, and patterns.

**08 Hours**

## **Unit - III**

### **7. In-silico Drug Designing-I**

Introduction to traditional drug designing, Introduction in-silico drug designing approach, Methodology for in-silico drug designing: Structure based and Ligand based drug designing; De novo drug designing, pharmacophore modeling in drug designing, Ligand screening, drug designing based on template, Steps in drug designing: Target identification, target validation, lead identification and validation; different tools used for drug designing.

**05 Hours**

### **8. In-silico Drug Designing-II**

Molecular Modeling, Lipinski's rule, Virtual Screening, Process of Docking, Quantitative structure-activity relationship (QSAR), Physical and Chemical basis of receptor ligand interactions, ADMET property analysis, Molecular dynamics simulation of protein and protein-drug interaction.

**05 Hours**

### **Text Books**

1. Andreas D. Baxevanis, B. F. Francis Ouellette, Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, 3rd, Wiley-Inte, 2005
2. David Mount, Bioinformatics: Sequence and Genome Analysis , 2nd, Cold Sprin, 2004

| <b>4 Design for Multiple Reactions</b><br>Introduction, general design approach to multiple reactions. Quantitative and qualitative analysis of product distribution. Effect of temperature and pressure on single reaction. General graphical procedure, optimum temperature progression. Factors affecting choice of reactors: optimum yield, conversion, selectivity and reactivity. <div style="text-align: right;"><b>08 Hours</b></div> |                                      |                               |
| <b>5 Non-Ideal Reactors</b><br>Non-ideal reactors, residence time distribution studies, Stimulus Response Technique, pulse and step input response of reactors, RTD's for CSTR and PFR, Relationship between C, E and F-curve. Kinetic models for non-Ideal reaction system, Axial Dispersion Model <div style="text-align: right;"><b>04 Hours</b></div>   |                                      |                               |

### **6 Microbial kinetics:**

Introduction to microbial kinetics, Yield coefficient, Simple kinetic models for microbial growth, transient growth kinetics Factors affecting the kinetics of Monod model; Growth of Filamentous Organisms. kinetic Models for product formation and substrate degradation

**08 Hours**

### **Unit-III**

### **7 Heterogeneous Reactor System:**

Heterogeneous reactions in Bioprocessing. The rate equation for surface for kinetics, Pore diffusion kinetics with combined with surface kinetics. Porous catalyst particle Performance equation for reactor containing Porous catalyst particles. External and internal mass transfer effects.

**04 Hours**

### **8 Reactor Engineering**

Bioreactor configurations: Bubble column, airlift reactor, packed bed, fluidized bed, trickle bed,

**04 Hours**

### **Text Books:**

1. Chemical Reaction Engineering by Octave and Levenspiel., John Wiley, 3<sup>rd</sup> Edition, 2006.
2. Elements of Chemical Reaction Engineering by Fogler, H.S., Prentice Hall, 1986.

### **Reference Books:**

1. Bioprocess Engineering Principles by Pouline M Doran Academic Press , 2003
2. Biochemical Engineering Fundamentals By Bailey and Ollies McGraw Hill 2<sup>nd</sup> Edition
3. Chemical Reactor Analysis and Design by Forment G F and Bischoff K B. John wiley,1976
4. Chemical engineering By J.F Richardson and J.M Coulson Volume 6

| P-V-T Behavior of pure fluid, Processes involving ideal gases, Equation of state for real gases: Vander Waals equation, Redlich-Kwong equation, Peng-Robinson equation, Virial equation. Compressibility charts: Principle of corresponding states, Numerical problems.   |                                      |                               |
| <b>07 Hours</b>   |                                      |                               |
| <b>4. Thermodynamic properties of Biological fluids</b>   |                                      |                               |
| Classification of thermodynamic properties, Work function, Gibbs free energy, Gibbs-Helmholtz equation, ATP Synthesis in cell and Protein Folding, Metabolic reactions in cells. Entropy - heat capacity relationships, Relationships between $C_p$ and $C_v$ , Activity of molecule, Chemical potential, Oxidation-Reduction reaction, Cell Membrane Transportation & Protein Extraction, Osmosis, Nernst equation in membrane transportation, Numerical problems. |                                      |                               |
| <b>08 Hours</b>   |                                      |                               |

**Unit III****5. Statistical Thermodynamics**

Boltzmann distribution & partition function, Protein folding and helix-coil transition, Binding equilibria, Oxygen binding to myoglobin & Hemoglobin.

**04 Hours****6. Reaction Equilibria**

Reaction Stoichiometry, Effect of temperature on standard heat of reaction. energy coupling reactions, activation energy, Criteria of chemical reaction equilibrium, Relationship between Equilibrium constant and standard free energy change, Effect of temperature, pH and pressure on equilibrium constants and other factors affecting equilibrium conversion, Numerical problems.

**06 Hours****Text Books**

1. Biological Thermodynamics by Donald T. Haynie, 2<sup>nd</sup> edition, Cambridge University Press, 2008
2. Introduction to chemical engineering thermodynamics by J.M. Smith, H. C. VanNess, M.M. Abbott, 7<sup>th</sup> edition, Tata McGraw-Hill, New Delhi, 2005.

#### **Preamble:**

The Mini project is an essential part of the curriculum structure which integrates all the skills acquired from all the theory and laboratory courses of 3<sup>rd</sup> and 4<sup>th</sup> semester. The mini project work is based on the theme: "Isolation and preliminary characterization of metabolites producing microorganisms". Mini project emphasizes on basic skill development like isolation, screening, and characterization of the microorganisms. Students gain hands on experience during their mini Project implementation. Mini project facilitates the students to present their work on different platforms likes seminars and national conferences. Mini project help students in their job, higher studies as well in higher research careers.

#### **Guidelines:**

1. Mini project has to be carried out in teams of four students.
2. Every team needs to maintain laboratory work book which contains details of all the work carried out in the laboratory.
3. Make entries in log books for instrument usage.
4. Adhere on timely report submission to the coordinator.
5. Provide requisitions beforehand for any project work

#### **Review committee:**

Review committee is formed by the mini project coordinator taking into consideration each review committee has faculty experts from all the domains. Review committee also consists of the guide of the respective project group.

#### **Project evaluation:**

| Sl. No      | Phase                    | Marks | Review            |
|-------------|--------------------------|-------|-------------------|
| 1           | Concept generation phase | 15    | Committee         |
| 2           | Preliminary design phase | 10    | Guide/s           |
| 3           | Definitive design phase  | 10    | Guide/s           |
| 4           | Final submission         | 15    | Committee         |
| 3           | End Semester Assessment  | 50    | External/Internal |
| Total Marks |                          | 100   |                   |

| <b>Teaching Hours:50</b>   | <b>Examination Duration: 3 Hours</b> |                               |
| <b>Unit - I</b>  |                                      |                               |
| <b>1.Media and Inoculum development for industrial fermentations</b>   |                                      |                               |
| Bioprocess development: An interdisciplinary challenge, Biotechnology & Bioprocess Engineering, steps in bioprocess development, Media ingredients, medium formulation, oxygen requirements, antifoams, medium optimization, Ingredients for mammalian cell culture and plant cell culture. Introduction, Criteria for transfer of inoculum, development of inocula for bacterial processes, yeast processes and mycelial processes. Inoculum development for plant Fermenter. |                                      |                               |
| <b>08 Hours</b>  |                                      |                               |
| <b>2.Sterilization</b>   |                                      |                               |
| Media sterilization, Design of sterilization process: Batch Process (Dell factor, holding time, and thermal death kinetics), continuous sterilization process; sterilization of fermenter and other ancillaries. Scale up of sterilization, filter sterilization of air and media.   |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>3.Design of bioreactors</b>   |                                      |                               |
| Basic objective of fermenter design, aseptic operation & containment regulation, achievement and maintenance of aseptic conditions, body construction, agitator and sparger design, baffles, stirrer glands and bearings. Animal cell bioreactors. Single use bioreactor, perfusion system, Data analysis software for fermenter Ex:simca software.  |                                      |                               |
| <b>07 Hours</b>  |                                      |                               |
| <b>Unit - II</b>   |                                      |                               |
| <b>4.Scale Up of Bioreactor</b>  |                                      |                               |
| Scale up of bioreactors: Introduction, Scale-Up methods: Geometric and Dynamic Similarity, Criteria for scale-up: Constant power consumption/volume, constant KLa, constant mixing time, constant tip speed, Regime analysis: Time constant for transport phenomena, time constant for conversion. Scale down approach.  |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>5.Heat Transfer</b>   |                                      |                               |
| Heat transfer in Bioprocess: Design equation for heat transfer process, Energy balance, Logarithmic and arithmetic mean temperature difference, Calculation for heat transfer coeffiISAnt, applications of design equations, Relationship in between heat transfer, cell concentrations and stirring conditions, Numerical based examples on above.  |                                      |                               |
| <b>04 Hours</b>  |                                      |                               |

### 6. Mass Transfer

Mass transfer in Bioprocess: Role of diffusion in bioprocessing, Different equations in mass transfer ( liquid-solid, liquid-liquid and gas-liquid) , Oxygen uptake in cell culture: Factors affecting cellular oxygen demand, Oxygen transfer from gas bubble to cells, Oxygen transfer in fermenter, measuring dissolved oxygen concentrations, Measurement of KLa: Oxygen balance method, Gassing out techniques ( static method of Gassing out and dynamic method of Gassing out) Sulphite oxidation, Factors affecting KLa, Oxygen transfer in large vessels, Numerical based examples on above.

**05 Hours**

### 7. Fermenter fluid rheology

Fermentation broth: Viscosity, Viscosity measurement, Rheological properties of fermentation broths, Factors affecting broth viscosity , Mixing in Fermenters: Mechanism of mixing, Assessing mixing effectiveness, estimation of mixing time, Power requirement for mixing: Ungassed Newtonian fluids, ungassed non-Newtonian fluids, Gassed fluids, Calculation of power requirements, Scaleup of mixing systems, Improving mixing in Fermenters, Effect of rheological properties on mixing, Role of shear in stirred fermenters: Interaction between cells and turbulent eddies, Bubble shear, operating conditions for shear damage. Numericals

**06 Hours**

## Unit - III

### 8. Bioreactor kinetics

Batch reactor kinetics, CSTR kinetics, Fedbatch kinetics and plug flow kinetics, Numericals

**05 Hours**

### 9. Solid State fermentation:

Introduction, SSF v/s SMF, Types of SSF reactors, Microbial growth kinetics in SSF, Heat & Mass Transfer in SSF

**05 Hours**

### Text Books

| <b>Course Title: Bioprocess Control and Automation</b>  |                                      | <b>Course Code: 23EBTC302</b> |
| <b>L-T-P:: 4-0-0</b>  | <b>Credits:4.0</b>                   | <b>Contact Hours: 04</b>      |
| <b>ISA Marks:50</b>   | <b>ESA Marks:50</b>                  | <b>Total Marks:100</b>        |
| <b>Teaching Hours:50</b>  | <b>Examination Duration: 3 Hours</b> |                               |
| <b>Unit I</b>   |                                      |                               |
| <p><b>1 Instrumentation &amp; Process Dynamics:</b> Introduction to Measurement of important physicochemical and biochemical parameters in bioprocess. Methods of on line and off line estimation of biomass, substrates and products. Brief introduction to typical automatic control system and its components. Open loop and closed loop control systems.</p>  |                                      |                               |
| <b>05 Hours</b>   |                                      |                               |
| <p><b>2 First &amp; Second Order Systems:</b> Mathematical representation of physical systems. Transfer function representation of linear first order systems, Examples: mercury in glass thermometer &amp; Liquid level system. Mathematical forms of standard Input function/Forcing Functions such as Step input, Impulse Input, Linearly increasing Input and Sinusoidal Input. Response of first order system for step input, Features of step response, Response of linearly increasing input. Conceptual numerical. First Order Systems in Series: Interacting and Non-Interacting systems &amp; their Transfer function representation. Second Order Systems: Transfer function representation of Second order systems, Example: Pneumatic Control Valve.</p> |                                      |                               |
| <b>10 Hours</b>   |                                      |                               |
| <b>Unit II</b>  |                                      |                               |
| <p><b>3 Controller and Final Control Elements:</b> Different types of controllers-P (Special case of P-controller i.e ON-OFF controller), PI, PD, PID controllers. Derivation of Transfer Functions of different types of controllers. Final control element: The role of Final control Element in control system. Example: Pneumatic Control Valve: Working of Pneumatic control valve, Types of Pneumatic Control Valves i.e. Air to close &amp; air to open.</p>   |                                      |                               |
| <b>10 Hours</b>   |                                      |                               |
| <p><b>4 Block Diagram Reduction:</b> Block diagram representation of control systems, Block diagram reduction in case of Servo and Regulatory control systems. Reduction of block diagrams for single input &amp; Single output systems (SISO) &amp; Multiple Input &amp; Multiple Output Systems (MIMO), Problems on block diagram reduction.</p>  |                                      |                               |
| <b>05 Hours</b>   |                                      |                               |

**5 Block Diagram Reduction (MIMO systems):** Analysis of Multiple Input Multiple Output Systems: Introduction to Multiple Input & Multiple Output Systems (MIMO), Examples of MIMO systems. Analysis of MIMO systems considering only one Input at a time while other Inputs are Suppressed. Considering only one output at a time while other outputs are Suppressed. Problems on block diagram reduction considering MIMO systems.

**10 Hours**

### Unit III

**6 Transient response of different controllers for Servo & Regulatory control Problems:** Transient response of P, PI, PD & PID controllers for servo and regulatory problems. The determination of offset in all cases.

**05 Hours**

**7 Analysis of Stability:** Concept of stability, stability criterion. Routh test for stability. Theorems of Routh Array test, Conceptual numerical on Routh test for stability.

**05 Hours**

#### **Preamble:**

The Minor project is an essential part of the curriculum structure which integrates all the skills acquired from theory and laboratory courses of 3<sup>rd</sup>, 4<sup>th</sup> and 5<sup>th</sup> semester. The minor project work is based on the theme: "Production of metabolites and study of effect of physic-chemical parameters by isolates". Minor project emphasizes on studies on fermentation process, design of experiments, and partial purification of metabolites. Students gain hands on experience during their minor project implementation. Minor project facilitates the students to present their work on different platforms likes seminars and national conferences. Minor project help students in their job, higher studies as well in higher research careers.

#### **Guidelines:**

1. Minor project has to be carried out in teams of four students.
2. Every team needs to maintain laboratory work book which contains details of all the work carried out in the laboratory.
3. Make entries in log books for instrument usage.
4. Adhere on timely report submission to the coordinator.
5. Provide requisitions beforehand for any project work

#### **Review committee:**

Review committee is formed by the minor project coordinator taking into consideration each review committee has faculty experts from all the domains. Review committee also consists of the guide of the respective project group.

#### **Project evaluation:**

| Sl. No      | Phase                    | Marks | Review            |
|-------------|--------------------------|-------|-------------------|
| 1           | Concept generation phase | 15    | Committee         |
| 2           | Preliminary design phase | 10    | Guide/s           |
| 3           | Definitive design phase  | 10    | Guide/s           |
| 4           | Final submission         | 15    | Committee         |
| 5           | End Semester Assessment  | 50    | External/Internal |
| Total Marks |                          | 100   |                   |

| Analytical techniques for biomolecules purification, Paper chromatography, thin layer chromatography, Column chromatography, Gas chromatography, Ion-exchange chromatography, molecular exclusion chromatography, affinity chromatography, High performance liquid chromatography & UPLC- Principles, Methods, Instrumentation, Detectors, Analysis of data.   |                                      |                               |
| <b>08 Hours</b>  |                                      |                               |

### 5. Electrophoretic techniques

Theory & application of polyacrylamide & Agarose gel electrophoresis for protein & nucleic acids, capillary electrophoresis, pulsed field gel electrophoresis, Iso-electric focusing, 2D-gel electrophoresis and Immunoelectrophoresis

**06 Hours**

### Unit III

### 6. Centrifugation techniques

Basic principles of sedimentation, centrifuges and their uses, preparative ultracentrifuges, density gradient ,analytical ultra-centrifuges, applications

**06 Hours**

### 7. Advanced Instrumental methods

LC-MS, GC-MS, HPTLC, SEM, Atomic Force Microscopy, transmission electron microscopy (TEM)

**04 Hours**

| <b>3. Cost Analysis and Manufacturing Cost</b>  |                                      |                               |
| Cost Analysis: Factors involved in project cost estimation. Cash flow diagrams for the industrial operation, Cumulative cash position, factors affecting the Investment and production cost, Different methods employed for the estimation of the capital investment. Estimation of equipment cost by sixth tenth rule, Cost index. Marshall and swift installed – equipment indexes, Engineers News-Record construction index, Nelson –Farrar refinery construction index. and Chemical Engineering plant cost index Manufacturing Costs: Direct Production costs, indirect cost and fixed charges (including depreciation, taxes, insurance, rental costs etc.) |                                      |                               |
| <b>10 Hours</b>   |                                      |                               |
| <b>4. Bioprocess Economics:</b>   |                                      |                               |
| Economic analysis for the production of following Products.( Historical Perspective, Fermentation Technology, Recovery of product and process economics of following  |                                      |                               |

products)

- High volume, low value products. (Citric acid, Ethanol and Amino acids etc)
- Medium volume, medium value products.( Antibiotics, Crude Enzymes and Vitamins etc)
- Low volume, high value products. ( MAb, purified Enzymes and Therapeutic proteins etc)

**06 Hours**

### Unit III

#### 5. Profitability Analysis and Optimization Technique

i) Importance of profitability analysis in investment decision making. Different Methods for calculating the profitability. Minimum Acceptable Rate of return. Methods that Do not consider Time value of money.

**04 Hours**

ii) General procedure to find the optimum conditions, factors affecting the optimization, comparison of analytical and graphical methods. Linear programming, Simultaneous Equations and dynamic programming

**04 Hours**

### Unit III

#### 5. Computer Assisted Drug Discovery-Part-I.

The Drug Development Process, Introduction, The Discovery and Development Process, New Lead Discovery Strategies, Composition of Drug Discovery Teams, The Practice of Computer-Assisted Drug Discovery (CADD),

**05 Hours**

#### 6. Computer Assisted Drug Discovery-Part-II.

Current Practice of CADD in the Pharmaceutical Industry, Management Structure of CADD Groups, Contributions and Achievements of CADD Groups, Limitations of CADD Support, Inherent Limitations of CADD Support, State of Current Computational Models, Software and Hardware Constraints.

**05 Hours**

#### Text Books:

1. Moody P.C.E. and A.J.Wilkinson Protein Engineering, IRL Press Oxford 1990.
2. The molecular modeling perspective in drug design by N Claude Cohen, 1996, Academic Press

#### Reference Books:

1. M.Michael Gromiha, Protein Bioinformatics- From Sequence to Function. Academic press 2010
2. Branden C. and Tooze R. Introduction of Protein structure, Garland 1993

| <b>4.Introduction to Process Design:</b>  |                                      |                                 |
| Steps involved in process design, Process flow diagram structure and hierarchical approach, importance of Material and Energy balance, selection of unit operations,  |                                      |                                 |
| <b>05 Hours</b>   |                                      |                                 |

### Unit III

#### 5. Introduction to process simulation software

Bioprocess design with example: Process Description, Specifying Process Sections, Specifying Equipment Sharing, Initialization of Reaction Operations, Process Analysis, Cost Analysis and Economic Evaluation, Environmental Impact.

**05 Hours**

#### 6. Use of Super Pro in Process Simulation:

Components and mixtures, Physical and Chemical properties of components, material and energy balance simulation, adding unit operation, scheduling the unit process, process cost estimation, sizing of the unit operation. Case study: Monoclonal antibody production, Enzyme production

**05 Hours**

#### Text Books:

integral proteins in membranes, conformational variations during ion transport, signal transduction and molecular reception (qualitative).

**04 Hours**

### **Unit III**

#### **5. Biomolecular Interactions and Dynamics-I**

Association of macromolecules, molecular conjugates, supramolecular interactions, DNA – Protein interactions, DNA – small molecule interactions, RNA – Protein interactions, Protein – protein interactions, lipid/membrane-protein interactions

**05 Hours**

#### **6. Biomolecular Interactions and Dynamics-II**

Molecular mechanics and dynamics (Newtonian and Monte Carlo simulations), theoretical principles and its importance towards in-silico simulations, results of molecular dynamics calculations and their implications to biological function.

**05 Hours**

#### **Text Books**

1. Biophysics – An Introduction by Cotterill, Wiley Student Edition 2002.

### Unit III

#### 4. Clinical research governance and ethics

Brief History of Clinical Research: Sulphanilamide Tragedy, Thalidomide Disaster, Nazi Experiments, Tuskegee Study, Belmont report, Nuremberg code, Declaration of Helsinki principles. Guidelines in Clinical Research-International Conference on Harmonization (ICH), Guidelines for Good Clinical Practice, ICMR guidelines for Biomedical Research on Human Subjects,. Regulation in Clinical Research- Drug and cosmetic act, FDA, Schedule-Y- Ethics Committee and their responsibilities. Clinical Research Regulatory Submission & approval Process- IND, NDA and ANDA submission Procedure. DCGI submission procedure. Other Regulatory authorities- EMEA, MHRA, PhRMA. Overview on regulatory affairs for pharmaceuticals, nutraceuticals and medical devices. Good clinical practices, risk assessment and trail monitoring, legal and ethical issues on biotechnology, medical research and related clinical practice.

**10 Hours**

#### Text Books:

1. Biochemistry and biotechnology by Gary Walsh, John Wiley & sons Ltd
2. Principles and practice of clinical research by J. I Gallin and F. P Ognibene, Elsevier publications.
3. Current trends in Pharmacology by Arunabha Ray & Kavitha Gulati, IK Intl.
4. Pharmaceutical Biotechnology by K Sambamurthy & Ashutosh Kar, New Age

#### Reference Books:

1. Basic & clinical Pharmacology by Bartram G. Katzung, Mc Graw Hill.
2. Biopharmaceuticals, biochemistry and biotechnology by Gary Walsh, Wiley Pub

#### Unit I

##### 1. Introduction

Role and importance of downstream processing in biotechnological processes. Characteristics of biological mixtures: morphology of cells, concentration of cells, products and by-products, rheological behavior. Process design criteria for various classes of by products (high volume, low value products and low volume, high value products), Steps involved: pretreatment, solid/liquid separation, concentration, purification, formulation. case studies, costing of product and numerical

**09 Hours**

##### 2. Primary Separation Techniques

Cell disruption methods for intracellular products: mechanical methods, physical methods and chemical methods. Removal of insolubles, Biomass (and particulate debris) heat and photosensitive materials separation techniques; Pretreatment of fermentation broth: heating, coagulation and flocculation, adsorption on filter aids. Theory of centrifugation and methods of centrifugation: tubular bowl centrifuge, disc stag centrifuge, decanter centrifuge. Theory of filtration and methods of filtration: plate and frame filter press, rotary drum filter and types of filter media, numerical.

**11 Hours**

#### Unit II

##### 3. Membrane separation processes

Membrane – based separations theory; Design and configuration of membrane separation equipment; Concentration polarization and fouling – causes, consequences and control techniques. Membrane modules: tubular module, flat sheet modules, spiral wound module, hollow fiber membrane. Classification of membrane processes: Based on hydrostatic pressure, concentration and applied electric field

**12 Hours**

##### 4. Enrichment operations

Precipitation methods with salts (salting-in and salting-out), organic solvents, polymers, isoelectric precipitation. Extraction methods for separation: Reversed micellar extraction and

Aqueous two-phase extraction, Supercritical extraction; In situ product removal / integrated bio-processing, SDS PAGE: determination of molecular weight of unknown protein. Numerical.

**08 Hours**

### **Unit III**

#### **5. Product recovery-I**

Introduction to chromatography: Principle, instrumentation and practices (Van Deemter equation). Derivation of equation for resolution of peaks, Preparative High Performance Liquid Chromatography for recovery of product, Ion Exchange Chromatography for separation of ionic compounds, numericals.

**05 Hours**

#### **6. Product recovery-II**

Gel Filtration Chromatography for molecular weight determination. Affinity Chromatography for purification of protein in cell free extract. Polishing Operations: Crystallization, Drying and Freeze drying or lyophilization

**05 Hours**

#### **Text Books:**

#### **Preamble:**

The engineering graduate's senior design project work is an essential part of the curriculum structure which integrates all the skills acquired during all the theory and laboratory courses addressing Bioprocess Engineering and Molecular Biotechnology verticals. The senior design project work requires exhaustive literature survey to define the problem statement and research objectives. Various optimization strategies help the student to select the best alternative and feasible solution. Project emphasizes on solving real time problems depicting societal benefits and industrial applications. Students gain hands on experience during their Project implementation. Projects also facilitate students to present their work on different platforms like seminars, national and international conferences. Project helps students in their higher studies as well in higher research careers.

#### **Themes**

Senior design project Themes are open and defined in following areas of research

1. Bioprocess engineering
2. Molecular Biotechnology
3. Environmental Biotechnology
4. Phytochemistry
5. Bioinformatics and In-silico approach
6. Process Optimization

#### **Guidelines:**

1. Project has to be carried out in teams (4 members).
2. Every team needs to maintain Project work book which contains details of all the work carried out in the laboratory
3. Make entries in log books for instrument usage.
4. Adhere on timely report submission to the project coordinator.
5. Provide prior requisitions for any project work
6. Every team needs to maintain which contains details of all the work carried out in the laboratory.

#### **Review committee:**

Review committee is formed by the project coordinator taking into consideration each review committee has faculty experts of all the domains. Review committee consists of the guide of the respective project group also.

**Review:**

- In semester assessment (ISA) will be done by the respective guides/review committee as per the rubrics.
- Total of **4 reviews** per semester will be carried out to evaluate the progress of the projects.
- During each review, team has to present the project work carried out (Viva-Voce or PPT).
- End semester Assessment (ESA) evaluation will be done by appointed examiners.

**Project evaluation:**

| Sl. No | Phase                                    | Marks |
|--------|--|-------|
| 1.     | Concept generation phase                 | 10    |
| 2.     | Preliminary design phase                 | 10    |
| 3.     | Definitive design phase                  | 10    |
| 4.     | Final submission phase                   | 20    |
| 5.     | End Semester Assessment- External review | 50    |
| TOTAL  |  | 100   |

#### **Preamble:**

REU is an initiative being implemented for students of VII semester. It is exclusive course designed to motivate and nurture students aspiring for research at early stage. The course gives a feel of research and has been instrumental for many students to seek admissions to higher studies in engineering, both in India and abroad. It is of six credits and interested students opt for the course in lieu of two courses. The list of REU titles along with the guides (with Ph.D.) and co-guides is displayed prior to commencement of the course. Interested students apply with their academic credentials till VI semester. The students are selected based on their CGPA and individual counselling. Selected candidates undertake REU with their supervisors for VII semester and submit a report. The outcomes are expected in the form of conference/journal publications. Also a REU journal, which is a compilation of all REU papers, is published as internal circulation at the university level every year.

#### **Guidelines:**

1. REU has to be carried out individually.
2. Each REU student needs to maintain laboratory work book which contains details of all the work carried out in the laboratory.
3. Make entries in log books for instrument usage.
4. Adhere on timely report submission to the coordinator.
5. Provide requisitions beforehand for any project work

#### **Review committee:**

Review committee is formed by the REU coordinator taking into consideration each review committee has faculty experts from all the domains.

#### **REU Evaluation:**

| Phase                  | Review   | Marks | Review members |
|------------------------|----------|-------|----------------|
| 1<br>(Summer semester) | Review-1 | 15    | Guide/s        |
|                        | Review-2 | 15    | Guide/s        |
|                        | Review-3 | 20    | Committee      |
| 2                      | Review-4 | 25    | Guide/s        |

|  |                    |           |     |           |
|--|--------------------|-----------|-----|-----------|
|  | (Seventh Semester) | Review-5  | 25  | Committee |

| <b>Unit I</b>  |                                      |                               |
| <b>1 Introduction</b>  |                                      |                               |
| History of fermentation products, Range of fermentation process: Traditional approach: biomass, enzymes, metabolites and biotransformation; Modern fermentation process: rDNA products, animal cell culture: therapeutic proteins, monoclonal antibodies; application of system biology approach; generalized representation of typical fermentation process.              |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>2. Isolation and improvement of industrial microorganisms</b>   |                                      |                               |
| Isolation methods: Primary screening and secondary screening; Improvement of industrial microorganism: selection of induced mutants for primary and secondary metabolites, isolation of revertant mutants, use of rDNA systems, and improvement by other properties.   |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>3. Fermentation products</b>  |                                      |                               |
| Beverages (beer), Ethanol, Aminoacids, enzymes (lipase/protease), penicillin, therapeutic proteins, monoclonal antibodies and vaccines.  |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>Unit II</b>   |                                      |                               |
| <b>4 Bioreactor configuration-I</b>  |                                      |                               |
| CSTR with recycle, CSTR in series, Airlift reactor, Fluidized bed bioreactor, bubble column bioreactor, packed bed bioreactor, trickle bed bioreactor, deep jet bioreactor, rotating disc bioreactor.  |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>5. Bioreactor configuration-II</b>  |                                      |                               |
| Animal cell bioreactors:- Homogeneous reactor: Solid and macro porous micro carriers bioreactor; Heterogeneous reactor: Hollow fiber bioreactor, Packed glass bed bioreactor, fluidized bed bioreactor, cell encapsulation; Disposable bioreactor: Wave bioreactor and stirred bag bioreactor, Perfusion system- single use reactor and Open race ponds, photo bioreactor. |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |
| <b>6. Advance downstream processing</b>  |                                      |                               |
| Process integration in product recovery, large scale refolding of therapeutic proteins, advanced membrane technology, Chromatography: column quantification and validation, AKTA purifier, reversed micellar technique for bio separation Single use technology in purification.   |                                      |                               |
| <b>05 Hours</b>  |                                      |                               |

### Unit III

#### 7. Fermentation monitoring and control:

On-line and off-line monitoring instruments, Bioprocess modeling for control, Estimation technique: Traditional method, linear black-box model and non-linear model; control strategies for fermentation, real time data analysis: Raman spectroscopy.

**05 Hours**

#### 8. Fermentation data analysis:

Introduction, classification of fermentation measurement and quantities, calculation of metabolites, estimation of unmeasured variables, calculation of integral and averaged variable, physiological variable and pattern recognition technique, SIMCA software.

**05 Hours**

#### Text Books:

1. L.E.Casida, JR, Industrial Microbiology, New Age International (P) Ltd Publication.
2. Prescott and Dun, Industrial Microbiology, McGraw-Hill Book Company, Inc. New York

#### Reference Books:

1. D.Lanch, Drew, Wang, Comprehensive Biotechnology-Volume 3, Elsevier Publication.

| <b>Teaching Hours:40</b>  | <b>Examination Duration: 3 Hours</b> |                              |
| <b>Unit I</b>   |                                      |                              |
| <b>1. Fundamentals of Food Processing Technology</b>  |                                      |                              |
| Basic concepts about properties of foods: liquid, solid and gases; Introduction to food processing: scope and significance; Principles of food processing and preservation  |                                      |                              |
| <b>04 Hours</b>   |                                      |                              |
| <b>2. Microbial Food Spoilage</b>   |                                      |                              |
| Food as substrate for microorganisms, Primary sources of microorganisms in foods, Microbes induced biochemical changes in foods, Microbiological Examination of foods, Food poisoning, and types. , A brief account of various organisms related with food poisoning- <i>E. coli</i> , <i>Clostridium</i> , <i>Bacillus</i> , <i>Staphylococcus</i> and <i>Vibrio</i> |                                      |                              |
| <b>07 Hours</b>   |                                      |                              |
| <b>3. Food biotechnology and Applications</b>   |                                      |                              |
| Enzymes, organic acids, antibiotics, baker's yeast, single cell protein and Mushrooms. Bicolours, Concept of fermented foods and beverages, Probiotics, Prebiotics & Symbiotics, Genetically Modified Foods   |                                      |                              |
| <b>04 Hours</b>   |                                      |                              |
| <b>Unit II</b>  |                                      |                              |
| <b>4. Unit Operations in Food Processing</b>  |                                      |                              |
| Introduction, Food Engineering operations- raw material preparation, cleaning, sorting, grading and peeling. Food conversion operations- size reduction, emulsification, filtration, membrane separation, centrifugation and extraction. Pulsed Electric Field processing, High-Pressure Processing,  |                                      |                              |
| <b>04 Hours</b>   |                                      |                              |
| <b>5. Thermal Processing of Foods</b>   |                                      |                              |
| Heat processing using steam or water, Blanching, Pasteurization, Heat Sterilization,  |                                      |                              |

Evaporation, Distillation, Extrusion and Canning. dielectric heating, ohmic and infrared heating. Dehydration, Intermediate Moisture Foods, Baking and Roasting, Heat processing using hot oils- Frying.

**06 Hours**

### **6.Non-Thermal Processing of Foods**

Chilling, Freezing, Freeze-drying, Vacuum Concentration, Processing by chemical methods-sugar, salt, curing, smoking, acid and chemicals. Irradiation of foods. Controlled and Modified–Atmosphere Packaging. Concept of hurdle technology.

**05 Hours**

## **Unit III**

### **7. Food Product Development**

Concept and need of new product development, testing and sensory evaluation, Development of product formulation and development,, Role of food ingredients in human health Packaging and shelf life of food products. Concept of Functional Foods and Nutraceuticals.

**05 Hours**

### **8. Food laws, Labeling and Regulatory Bodies**

Food Laws- General Standards and Regulations as per FSSAI, Regulatory bodies governing food laws. Certification and labeling of foods. Concept of HACCP and AGMARK

**05 Hours**

#### **Text Books:**

1. P.J.Fellows, Food Processing Technology. Principles and Practices, Second Edition, Woodland Publishing Ltd,Cambridge,England,2002
2. Avantina Sharma, Text Book of Food Science and Technology, International Book Distributing Co, Lucknow, UP, 2006

#### **Reference Books:**

#### Unit I

##### 1. Introduction

Issues and scope of Environmental Biotechnology, Environment and Biotechnology, Areas of applications for Biotechnology. Microbes and Environment, Genetically modified organisms and Legislation.

**03 Hours**

##### 2. Waste Water Treatment

Sources of water pollution, Waste water characteristics: Physical, Chemical and Biological characteristics. Chemical Oxygen Demand (COD) and Biochemical Oxygen Demand (BOD). Introduction to physical and chemical waste water treatment methods. Biological wastewater treatment methods: Aerobic suspended growth treatment processes (Activated Sludge Process, aerated lagoons etc), Aerobic attached growth treatment processes (Trickling Filter, Rotating Biological contactors), Anaerobic suspended growth treatment processes- contact digestors, packed column reactors, UASB. Bioelectrochemical systems (BES) including microbial fuel cells (MFCs).

**12 Hours**

#### Unit II

##### 3. Solid waste Management

Basic aspects, Generation of solid wastes, general composition of Municipal solid waste, On site handling, storage and processing, Collection of solid wastes. Solid waste processing techniques and equipments. Recovery of biological conversion products from solid waste such as composting, sanitary landfilling, recycling, vermicomposting, incineration. Solid waste management for energy recovery-Biogas production, processing of lignocellulosic waste biomass for ethanol production

**08 Hours**

##### 4. Bioremediation and Bioleaching

Uses of bacteria for bioremediation, co-culture and mixed culture biotechnology bioremediation of aromatic and aliphatic hydrocarbons, PCB dechlorination, immobilization techniques for bioremediation, biosorption & bioaccumulation, bioaugmentation and biostimulation genetic engineering of microbes for bioremediation. Phytoremediation-plants capable of assimilating heavy metals. Bioleaching using microbes, role of Thiobacilli, direct &

indirect bioleaching, copper extraction by leaching, dump leaching.

**07 Hours**

### Unit III

#### 5. Biofuels

Environmental Biotechnology and biofuels: biogas; bioethanol/biomethane; biodiesel; biohydrogen, bioelectricity; Description of the industrial processes involved, microorganisms and biotechnological interventions for optimization of production; phycoremediation- biofuels through algal biotechnology; Microbiologically enhanced oil recovery (MEOR); Production of biosurfactants: bioemulsifiers;

**05 Hours**

#### 6. Environmental Impact Assessment

Introduction, Scope and history of EIA, Need of Environmental Impact assessment. Stakeholder and public involvement, Identification and quantification of environmental effects and Environmental Impact statement (EIS), Environmental Regulations.

**05 Hours**

#### Text Books

1. Pramod Kumar, Vipin Kumar, Pravin Kumar Sachan, Textbook of Environmental Biotechnology, Woodhead Publishing India in Energy, 2019.
2. Indu Shekhar Thakur, Environmental Biotechnology, 2<sup>nd</sup> edition: Basic Concepts and Applications, Dreamtech Press, 2019.
3. Pradipta Kumar Mohapatra, Textbook of Environmental Biotechnology, I K International Publishing House, 2007.

| <b>4. Analytical Method Validation</b>   |                                      |                              |
| FDA and ICH guidelines. Analytical method validation, Specificity, Linearity, Accuracy, Precision, Limits of detection (LOD) and quantification (LOQ), Minimum detectable amount (MDA), Sample stability and method robustness, System suitability, Statistical process control for HPLC, Troubleshooting out-of-control systems, Case studies, Validation of Analytical Methods.  |                                      |                              |
| <b>06 Hours</b>  |                                      |                              |

### Unit III

#### 5. Quality Standards

Introduction, ISO 9000 Series of Standards, Management Responsibility, Quality System, Contract Review, Design Control, Document and Data Control, Control of Quality Records, Internal Quality Audits, Training, Servicing, Environmental Management System.

**04 Hours**

#### 6. Implementation and Regulation

Role of QC and QA in Bio/Pharmaceutical organization, Quality System, Contract Review, Design Control, Document and Data Control, Product Identification and Traceability, Process Control, Control of Quality Records, Internal Quality Audits, Training.

**04 Hours**

#### Text Books:

1. Pharmaceutical Process Validation by Robert Nash and Alfred Wachter, Marcel Dekker. Publisher: Marcel Dekker Inc. 2011.
2. Good Manufacturing Practices for Pharmaceuticals: A Plan for Total Quality Control From Manufacturer to Consumer, Sidney J. Willig, Publisher: Marcel Dekker Inc. 2005.

#### Reference Books:

1. Validation of Pharmaceutical Processes: Sterile Products, Frederick J. Carlton (Ed.) and James Agalloco (Ed.), Marcel Dekker, 2008.
2. Validation Standard Operating Procedures: A Step by Step Guide for Achieving Compliance in the Pharmaceutical, Medical Device, and Biotech Industries, Syed Imtiaz Haider, Saint Lucie Press, 2004.

| <b>ISA Marks:50</b>   | <b>ESA Marks:50</b>                  | <b>Total Marks:100</b>       |
| <b>Teaching Hours:40</b>  | <b>Examination Duration: 3 Hours</b> |                              |
| <b>Unit I</b>   |                                      |                              |
| <b>1.Introduction</b>   |                                      |                              |
| Introduction to Industrial Hygiene, Basic Laboratory Safety & Personal Protective equipment's (PPE). Risk & Risk Assessment, definition of Hazard and process of hazard identification, frequency and severity of Hazard, Occupational Health and Safety Administration, Safety and loss prevention, scope and outline of risk management. Legislation regarding process safety.  |                                      |                              |
| <b>05 Hours</b>   |                                      |                              |
| <b>2. Biological Hazards &amp; Containment Levels</b>   |                                      |                              |
| Classification of biological hazards, Major pathological mechanisms for health effects associated with hazardous biological agents, Biological Agents, major pathological mechanisms. Biosafety level: The BSL ranges from the lowest biosafety level-1 (BSL-1) to the highest at level-4 (BSL-4) based on the agents. Biohazard risk classification used by the World Health Organization. Bio-waste. Genetically Modified Organisms (GMO): requirements, or other Environmental safety regulations. Containment Levels: Containment requirements based on the assessment of potential biohazard, Biological safety cabinets (Class-I, Class-II& Class-III) to provide personnel & environmental protection, Biological safety cabinets for safety in Research & Manufacturing of Biological products. |                                      |                              |
| <b>10 Hours</b>   |                                      |                              |
| <b>Unit II</b>  |                                      |                              |
| <b>3.Chemical safety and Fire Safety</b>  |                                      |                              |
| Toxicity and safe handling of materials. Identification Material Safety Data Sheet (MSDS), evaluating exposure to volatile toxicants. Industrial hygiene, Industrial Hygiene Regulations. Runaway Reactions. Nature of Accidents and major disasters. Some Case Studies: Bhopal Gas Tragedy, The Flixborough UK, Cyclohexane Disaster, Seveso Accident: July 10, 1976, etc.   |                                      |                              |
| Fire and Explosion, Work Place Hazards, Dangerous Substance, Fire triangle, Effective Ignition Source, Fire Extinguishers. Designs to prevent Fire and Explosion. General Design Methods to prevent Fire.   |                                      |                              |
| <b>05 Hours</b>   |                                      |                              |
| <b>4. Safe Handling Radioactive Materials/Radioactive Isotopes</b>  |                                      |                              |
| Introduction to safe handling radioactive materials, Personal Protective Equipment and Clothing, Precautions for Using Radioactive Material, Radioactive Materials Safe Work Practices, Fume Hoods and Biosafety Cabinets, Good Laboratory Practices, Radiation Safety Committee (RSC).   |                                      |                              |
| <b>05 Hours</b>   |                                      |                              |

### 5. Risk Assessment

Risk Management, evaluating and analyzing risks associated with those hazards, actions to eliminate the hazards, Risk Matrix, Acceptable risks and safety priorities, cost of saving a life, frequency of accidents, safety check lists, assessment of risks from complex plants, Action and Recommendation. Environmental hazards.

**05 Hours**

### Unit III

### 6. Hazard Identification and evaluation Techniques

Process for identifying hazards, Hazard Identification techniques such as HAZOP (Hazard and Operability Analysis): basic principles, explanation of guide words, procedures, critical examination of flowsheets, FMEA (Failure Modes and Effects Analysis), FTA (Fault Tree Analysis). Event Tree Analysis (ETA), Cause Consequence Analysis & Layer of Protection Analysis. What-If Analysis.

**05 Hours**

### 7. Process Safety Audit and Standards

Safety Audit: Key Elements of a Workplace Safety Audit, Safety Audit Checklist, Safety Audit Report, Industrial Process Safety standards: Laws & Regulations. Occupational Health Hazards. Occupational Safety and Health Administration (OSHA) and National Institute of Occupational Safety and Health (NIOSH), Toxic Substance and Control Act (TSCA).

**05 Hours**

### Text Books:

1. Crowl D.A. and Louvar J.F., Chemical Process Safety: Fundamentals with Applications. 3<sup>rd</sup> Edition. Prentice Hall Publisher.
2. Lees F.P. Lee's Loss Prevention in Process industries: Hazard Identification, Assessment and control. 4<sup>th</sup> Edition. Sa Mannan Publisher.
3. Chemical Process Safety: Fundamentals with Applications (International Series in the Physical and Chemical Engineering Sciences) Hardcover. 2011 by Daniel Crowl and Joseph Louvar. 3<sup>rd</sup> Edition. Pearson Prentice Hall Publisher.

### Reference Books:

1. Chemical Process Safety: Fundamentals with Applications, 3e Paperback – 1 January 2013 by Daniel A. Crowl and Joseph F. Louvar. 3<sup>rd</sup> Edition. Pearson Prentice Hall Publisher.
2. What Went Wrong? Case Histories of Process Plant Disasters: How They Could Have Been Avoided. By Kletz T. 5<sup>th</sup> Edition. Butterworth-Heinemann Publisher.

| History and Scope of Animal cell and Tissue culture, Advantages and Disadvantages of Cell culture, laboratory facilities for tissue culture. Culture media for cells and tissues. Laboratory layout, Essential equipment's and Consumable items, Aseptic Techniques- elements of aseptic environment and culturing vessels Types of tissue culture – Primary cultures and Cell lines maintenance of cell line cultures |                                      |                              |
| <b>06 Hours</b>  |                                      |                              |
| <b>Unit II</b>   |                                      |                              |
| <b>4.Culture characterization and culture maintenance</b>  |                                      |                              |
| Need for characterization, Parameters of Characterization, Cell Morphology, Confocal microscopy, DNA content analysis, Enzyme activity and Antigenic markers. Contamination in cell culture – sources, monitoring and eradication of contamination Cryopreservation and transportation.  |                                      |                              |
| <b>04 Hours</b>  |                                      |                              |

**5. Animal Cell culture Scale up and Automation**

Introduction to scale up and automation. Scale up in suspension culture: Continuous culture, Scale & complexities, Mixing & Aeration. Scale up in Monolayer culture: Multi surface propagators, Roller culture, Microcarriers, and Perfused Monolayer culture. Process control and Automation: Robotic cell culture and High throughput screening.

**05 Hours****6. Animal cell culture and Biopharmaceuticals production**

Mammalian cells as desired expression systems for protein biopharmaceuticals, Construction and selection of high-producing cell lines, Medium development for mammalian cell culture, and Process development for mammalian cell culture. Single use disposable animal cell culture technologies for biopharmaceutical manufacturing.

**06 Hours****Unit III****7. Plant Cell culture and Secondary Metabolite production**

Introduction, Selection of high yield cells and Mass cultivation of plant cells: Free cell suspension culture, Immobilized plant cell culture, and Two phase system culture. Elicitor induced accumulation of products. Biotransformation using plant cell cultures, Genetic modification and factors limiting large scale production of useful compounds.

**05 Hours****8. Animal cell culture applications and Tissue engineering**

Hybridoma Technology and Animal cell culture applications in Monoclonal antibodies production. Products of Animal tissue culture – Erythropoietin, Tissue Plasminogen Activator & Factor VIII etc. Tissue Engineering – Introduction, Cell types, Extracellular matrix and Tissue engineering concepts. Artificial skin development by tissue engineering and its applications.

**05 Hours****Text Books:**

1. Introduction to Plant tissue culture Second edition. M K Razdan Oxford & IBH Publishing Co Pvt Ltd, New Delhi. 2003
2. Animal Cell Culture – Concept and Application by Sheelendra M Bhatt, Narosa Publishing House, New Delhi ISBN: 978-81-7319-926-4

**Reference Books:**

### Unit I

#### 1. Introduction:

Introduction to pharmaceutical industry, API and pharmaceutical products, Formulation Industry, Introduction to dosage forms, conventional dosage forms, Biopharmaceuticals & Biotechnology, Biopharmaceuticals: Current status & future prospects. Drug discovery & development process, Clinical research, pre-clinical testing in-vitro & in-vivo methods, drug safety & pharmacovigilance, Sources of Biopharmaceuticals, Dosage forms and routes of drug administration.

**06 Hours**

#### 2. Pharmacokinetic and Pharmacodynamics of Peptide & Protein Drugs:

Introduction to pharmacokinetics and pharmacodynamics, Disease target identification & selection, receptor based approach, drug as agonist & antagonist, Pharmacokinetics of protein therapeutics, ADME study for small molecules & protein therapeutics, optimization of pharmacokinetic profile, Pharmacodynamics of protein therapeutics, PK/PD Models. Drug metabolism, Phase-I and Phase-II reactions. CYP Families- case study, Drug side effects and adverse effects, drug toxicity, Pharmacogenomics & personalized medicine.

**10 Hours**

#### 3. The Drug Manufacturing Process:

Pharmacopeias, good manufacturing practices (GMP), good laboratory practices (GLP), manufacturing facilities, clean rooms, water plant & grades of water, production of final product & formulation, analysis of final product (Qualitative & Quantitative), documentation: SOP, specifications & records, batch manufacturing records (BMR), batch packaging records (BPR). Methods to enhance protein based therapeutics, product preservation and packaging techniques.

**08 Hours**

#### 4. Therapeutic Agents:

The cytokines (Interleukins & Interferons), haemopoietic growth factors (erythropoietin), hormones of therapeutic interest (insulin & glucagon), preservation and clinical use of blood products, therapeutic enzymes, monoclonal & polyclonal antibodies, vaccines and vaccine

technology (with appropriate case studies), gene and cell therapy: recent developments. Sustained drug release, targeted therapy, role of nanotechnology in drug delivery, Novel Drug Delivery Systems.

**08 Hours**

### Unit III

#### 5. Quality in Pharmaceutical Industry:

Quality Assurance & Quality Control, validation & qualification studies, aseptic fill-process validation, cleaning validation, Validation Master Plan, Qualification: IQ, OQ and PQ. Calibration of analytical instruments. Bioassays for protein therapeutics, test for sterility, Bacterial Endotoxin Test, product formulation & stability analysis,

**04 Hours**

#### 6. Regulatory issues and Drug product approval

Drug approval process (NDA & ANDA), Regulatory framework: Quality, Safety & Efficacy, generic and branded products, Global and Indian scenario, issues concerned to generics and biosimilars, Biosimilars and follow-on biologics, FDA & its Organizational structure, European regulations, Drug Registration in Japan, World harmonization of drug approvals (The ICH).

**04 Hours**

#### Text Books:

1. Biopharmaceuticals: Biochemistry & Biotechnology. Author: Gary Walsh. Second Edition, Pub: John Wiley & Sons, 2011
2. Pharmaceutical Biotechnology: Fundamentals and Applications. Ed: Daan J.A. Crommelin et al. Third Edition. Publisher: Informa Healthcare, 2007

#### Reference Books:

1. Molecular Biotechnology: Principles & Applications of r-DNA. Author: Bernard Glick & Jack Pasternak. 3<sup>rd</sup> edition, 2002, Pub: Panima Books.
2. Manual of Industrial Microbiology & Biotechnology by Arnold L. Demain. 2<sup>nd</sup> edition, 1999 Pub: ASM Press.
3. Biopharmaceuticals: An Industrial perspective. Authors: Gary Walsh & Brendan Murphy. 2009. Pub: Spring Books.

| Genome analysis and markers – Introduction, necessity and tools of genome analysis and markers. Genome Sequencing - Whole genome Shot gun, Hierarchical Shotgun, High-throughput sequencing, Chromosome walking, Chromosome jumping, Next Generation Sequencing. Molecular Markers: Concept of Markers, different types of markers and their general applications. Brief introduction to nature and applications of RFLP, RAPD, AFLP, SNP, Micro satellites, Minisatellites, Short Sequence Repeats, VNTR, EST, STS, Marker Assisted Selection |                                      |                              |
| <b>07 Hours</b>  |                                      |                              |
| <b>3. Genomics- Recent Advancements and Applications</b>   |                                      |                              |
| Microarray analysis, Genomic libraries, Gene-disease associations. Genomics Applications: Nutrigenomics, Toxicogenomics, Pharmacogenomics, Metagenomics, Medical applications, Human Genome Project. Model Organisms for Genomics studies- Yeast and Drosophila  |                                      |                              |
| <b>04 Hours</b>  |                                      |                              |
| <b>Unit II</b>   |                                      |                              |
| <b>4. Introductory Proteomics</b>  |                                      |                              |
| Proteomics- Introduction, History, Scope and Types. Protein – Sequence, Structure and function relationship. Different approaches for proteomics studies and their applications.   |                                      |                              |
| <b>04 Hours</b>  |                                      |                              |
| <b>5. Proteome separation and Purification</b>   |                                      |                              |
| Proteome extraction and purification. Separation of Proteins- ion-exchange, size exclusion and affinity chromatography techniques,1-D by Isoelectric focusing, 2-D by SDS-PAGE. Protein  |                                      |                              |

Identification- Edman degradation, Mass Spectrometry, MALDI-TOF, Electrospray ionization, Peptide mass fingerprinting.

**08 Hours**

#### **6. Proteomics- Recent Advancements and Applications**

Applications of proteome analysis to drug; Protein-protein interaction Protein engineering: Protein chips. Clinical and biomedical application of proteomics.

**03 Hours**

### **Unit III**

#### **7. Bioinformatics tools in Genomics**

Raw genome sequences, Major Genomic Databases, Genome Annotation, similarity search, Genome sequence alignment tools.

**05 Hours**

#### **8. Bioinformatics tools in Proteomics**

Proteome Databases, Proteome Annotation, Protein characterization and function, Families, patterns, domains and profiles.

**05 Hours**

#### **Text Books:**

1. Bioinformatics- Methods and Applications. Genomics, Proteomics and Drug Discovery. S.C. Rastogi, N. Mendiratta and P. Rastogi. PHI Learning Private Limited, delhi.
2. GENES IX Benjamn Lewin Oxford University and Cell Press 2010

#### **Reference Books:**

1. Introduction to Genomics- Arthur Lesk. Oxford University & Cell Press
2. Principles of Proteomics by R M Twyman BIOS Scientific Publishers 2004

| <b>Teaching Hours:40</b>  | <b>Examination Duration: 3 Hours</b> |                              |
| <b>Unit I</b>   |                                      |                              |
| <p><b>1. Perceptions about Biotechnology:</b> Biotechnology and social responsibility, Positive &amp; negative perceptions of Biotechnology, Public acceptance issues, surveys, areas of public concern for Biotechnology. Socio, ethical, economic and legal aspects of Biotechnology. Public education &amp; Biotechnology.</p> <p style="text-align: right;"><b>06 Hours</b></p>   |                                      |                              |
| <p><b>2. Bioethics:</b> Legality, morality, and ethics, Principles of bioethics: autonomy, human rights, beneficence, justice, equity, etc. Expanding scope of ethics from Biomedical practice to Biotechnology, ethical conflicts in Biotechnology.</p> <p style="text-align: right;"><b>05 Hours</b></p>  |                                      |                              |
| <p><b>3.Biosafety concept and issues :</b> Rational vs. subjective perception of risks and benefits, Hazards of BT , relationship between risk and hazard, Ethical implications of biotechnology products and techniques,</p> <p style="text-align: right;"><b>05 Hours</b></p>   |                                      |                              |
| <b>Unit II</b>  |                                      |                              |
| <p><b>4. National and International Regulations:</b> Cartagena protocol, OECD consensus documents and Codex Alimentarius; Indian regulations – EPA act and rules, guidance documents, regulatory framework – RCGM, GEAC, IBSC and other regulatory bodies; category of rDNA experiments; field trails – biosafety research trials – standard operating procedures - guidelines of state governments; GM labeling – Food Safety and Standards Authority of India (FSSAI)</p> <p style="text-align: right;"><b>10 Hours</b></p> |                                      |                              |
| <p><b>5. Biosafety &amp; Management:</b> Laboratory associated Biosafety practices, assessment of biohazard, Biosafety levels,. Risk analysis and assessment, Containment levels-physical, biological containments,. Good manufacturing practice and Good lab practices (GMP and GLP).</p> <p style="text-align: right;"><b>05 Hours</b></p>  |                                      |                              |

### Unit III

**6. Intellectual Property rights:** Introduction to history of GATT, WTO, WIPO and TRIPS; Introduction to IPR, Types of IP: Patents, Trademarks, Copyright, Design & Related Rights. Plant variety protection, Traditional knowledge, breeders rights, Geographical indications, Biodiversity and farmers rights. Patenting in biotechnology, case studies.

**05 Hours**

**7. Food, Agri and Pharma Sector:** The GM-food debate and biosafety assessment procedures for biotech foods including transgenic food crops, case studies- Golden Rice and Flav Savr Tomatto. Biosafety assessment of pharmaceutical products such as drugs/vaccines etc. Biosafety issues in Clinical Trials.

**05 Hours**

#### **Text Books:**

1. Bioethics & Biosafety- Sateesh MK, I.K. International Publishing House
2. Intellectual Property rights on Biotechnology – Singh K, BCIL, New Delhi.
3. Biotechnology: Expanding Horizons - B D Singh, Kalayani Publishers, 2010

#### **Reference Books:**

1. Bioethics & Biosafety – R. Rallapalli & Gita Bali, APH publication, 2007
2. Safety considerations for Biotechnology-Paris, OECD publications

| <b>Unit I</b>   |                                      |                              |
| <b>1 History of Vaccine Discovery and Development</b>   |                                      |                              |
| Variolation and Vaccination in Late Imperial era, early methods of vaccination, Edward Jenner's Role in the Introduction of Smallpox Vaccine, Eradication of small pox. Fight against polio, Historical background of vaccination, vaccine preventable infectious diseases, Over view of bacterial and viral vaccines and their importance to public health. Epidemiology and pathophysiology of vaccine preventable diseases with special emphasis on Diphtheria, and Tetanus. |                                      |                              |
| <b>07 Hours</b>   |                                      |                              |
| <b>2. Role of vaccines in epidemiology and public health system.</b>  |                                      |                              |
| Active and passive immunization, General immunization practices, Strategies for improving vaccination levels. Timing and Spacing of Vaccines.. Adverse Reactions Following Vaccination. Contraindications and Precautions to Vaccination. Role of B and T cells, primary and secondary immune response, Immunological memory, Booster doses, Factors influencing the magnitude of vaccine performance, adjuvants. Immune correlates in vaccine development.                     |                                      |                              |
| <b>08 Hours</b>   |                                      |                              |
| <b>Unit II</b>  |                                      |                              |
| <b>3. Vaccine design, development and types:</b>  |                                      |                              |
| Subunit vaccine component - antigen, delivery system. Structure-based Vaccine design - tools and techniques. Characters of effective vaccines: Vaccines, Live, killed, attenuated, sub unit vaccines, conjugated vaccines. Vaccine technology- Role and properties of adjuvants, recombinant DNA and protein based vaccines, plant-based vaccines, reverse vaccinology; Peptide vaccines, conjugate vaccines, Edible vaccines.  |                                      |                              |
| <b>06 Hours</b>   |                                      |                              |
| <b>4. Vaccine manufacturing and Quality Control.</b>  |                                      |                              |
| Commercial scale vaccine manufacturing: Upstream (use of cell lines, human diploid) and downstream (chromatography) of active substances. Vaccine formulation (liquid and lyophilization). Use of additives/adjuvants/stabilizers. Vaccine safety and efficacy of vaccines (in vitro and in vivo). cGMP implementation in the production of safe vaccines. Case study of vaccine manufacturing: HBV and polio vaccine   |                                      |                              |
| <b>09 Hours</b>   |                                      |                              |

**Unit III****5. Policies, ethical considerations and Regulatory affairs of vaccines.**

Regulation and testing of vaccines, Regulation of vaccines in developing countries, Role and functioning of National Regulatory Authorities (ICMR) and WHO .Different stages of review and regulation of vaccines (investigational new drug application, biologics license application, post-licensure). Evolution of vaccine regulations overtime and the current status of NRAs functionality globally. Brief on Indian regulatory system.

**05 Hours****6. Recent advancements in vaccinology:**

Concepts of reverse vaccinology, case study of Reverse Vaccinology. Novel vaccine delivery systems. Tools & servers for computational Vaccine design-from Genome to Vaccine. Antigenicity modification, epitope replacement, germline targeting. Antigenically variable infectious agents and their vaccines.

**05 Hours****Text Books:**

1. IAP Textbook of Vaccines by Nitin K Shah, Rohit Agrawal, Vipin M Vashishtha, TU Sukumaran
2. Vaccines. 6th Edition, Stanley Plotkin Walter Orenstein Paul Offit.

**Reference Books:**

1. Vaccine Development and Manufacturing. Emily P. Wen (Editor), Ronald Ellis (Editor), Narahari S. Pujar (Editor).
2. Vaccines & Vaccine Technologies. Jose Ronnie Vasconcelos

| <b>Unit I</b>  |                                      |                              |
| <b>1.Introduction to Basic statistics:</b>   |                                      |                              |
| Strategy of Experimentation, History of the Design of Experiments, Basic Principles of DOE: Randomization, Replication, Blocking, Multi-factor Designs, Confounding; Steps for Planning, Conducting and Analyzing an Experiment, Typical applications of Experimental design, Basic Principles, Guidelines for Designing, Concepts of random variable, probability, density function, cumulative distribution function. Concept of confidence level. Statistical Distributions: Normal, Log Normal & Weibull distributions. Hypothesis testing, Probability plots. |                                      |                              |
| <b>04 Hours</b>  |                                      |                              |
| <b>2. Screening Design:</b>  |                                      |                              |
| Introduction, Terminology: factors, levels, interactions, treatment combination, Orthogonal array, PB design, analysis of PD design, Numericals.   |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |
| <b>3.Full Factorial Design:</b>  |                                      |                              |
| Basic Definitions and Principles, The Advantage of Factorials, The Two-Factor Factorial Design, Statistical Analysis of the Fixed Effects Model, Model Adequacy Checking, Estimating the Model Parameters, Concept of the General Factorial Design, $2^k$ Factorial Design, The $2^2$ Design, The $2^3$ Design, The General $2^k$ Design.  |                                      |                              |
| <b>07 Hours</b>  |                                      |                              |
| <b>Unit II</b>   |                                      |                              |
| <b>4. Response surface methods:</b>  |                                      |                              |
| Introduction, Central composite design, Box Behnken design, importance of counter and surface plots.   |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |
| <b>5. R Programming Basics:</b>  |                                      |                              |
| Overview of R programming, Environment setup with R Studio, R Commands, Variables and Data Types, Control Structures, Vectors, Factors, Functions, Matrices, Arrays and Lists.   |                                      |                              |
| <b>06 Hours</b>  |                                      |                              |
| <b>6. Interfacing:</b>   |                                      |                              |
| Interfacing R to other languages, Parallel R, Basic Statistics: Linear Model, Generalized Linear Models, Non-linear models, Time Series, Autocorrelation and Clustering.   |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |

**Unit III****7. Introduction to Bioconductor for Sequence Data:**

Sequencing Resources, Ranges Infrastructure, DNA /amino acid sequence from FASTA files, Reads from FASTQ files, Aligned Reads from BAM files, Called Variants from VCF files, Genome Annotations from BED, WIG, GTF files.

**04 Hours****8. Biological Data Analysis:**

Preparing count matrices, The DESeq, DataSet, sample information, and formula design, exploratory analysis and visualization, Differential expression analysis, Plotting results, Annotating and exporting results

**04 Hours****Text Books:**

1. R for Everyone: Advanced Analytics and Graphics: by Jared P. Lander Addison Wesley Data & Analytics Series, 2013.
2. Design and analysis of experiments” by D.C. Montgomery, 7th edition John Wiley and sons, New York

**Reference Books:**

1. A Little Book of R for Bioinformatics: by Avril Coghlan, Release 0.1
2. Das. M.M. and Giri N.C. : - Design and Analysis of Experiments

| Introduction, Installation, Jupyter note book, types and sequence, python numbers and strings, variables, handling numerical data, python objects, data structure.   |                                      |                              |
| <b>10 Hours</b>  |                                      |                              |
| <b>Unit II</b>   |                                      |                              |
| <b>3. Python for genomic data science:Part II</b>  |                                      |                              |
| Ifs and loops, python functions, library, communication with outside, modules and package.   |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |
| <b>4. Genomic analysis: Algorithms</b>   |                                      |                              |
| Introduction, DNA as string, manipulation of DNA, Dynamic programming: Local and Global alignment, BLAST algorithm, DNA assembly.  |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |
| <b>5. Biopython</b>  |                                      |                              |
| Introduction, working with sequence, sequence objects, sequence alignment, reading genomic sequence files.   |                                      |                              |
| <b>05 Hours</b>  |                                      |                              |

**Unit III****6. Introduction to Galaxy software**

Introduction, galaxy platform, working with genomic data, creation of work flow, annotation, sharing and publishing of genomic data, Genome and RNA sequence analysis.

**05 Hours****7. Introduction to Bioconductor for Sequence Data**

Sequencing Resources, Ranges Infrastructure, DNA /amino acid sequence from FASTA files, Reads from FASTQ files, Aligned Reads from BAM files, Called Variants from VCF files, Genome Annotations from BED, WIG, GTF files.

**05 Hours****Text Books:**

1. Bioinformatics with Python Cookbook, Second Edition: Tiago Antao, Ingram short title; 2nd edition (1 January 2018), ISBN-13 : 978-1789344691.
2. R Bioinformatics Cookbook, Dan MacLean, Packt Publishing Limited (11 October 2019), ISBN-13 : 978-1789950694.
3. Hahne F, Huber W, Gentleman R, Falcon S. Bioconductor Case Studies. Springer Publishing Company, 2008. Mathur SK.

### Unit-III

#### 5. Startup Schemes

Building Biotech business challenges in Indian context-biotech partners (BIRAC, DBT, Incubation centers. Etc.), operational biotech parks in India. Indian Company act for Bio business-schemes and subsidies. Patent expiry and Entrepreneurship opportunity, Principles of Technology leasing, licensing and transfer, Business incubation support schemes, Successful startups-case study.

**05 Hours**

#### 6. Funding Opportunities

Startup schemes in Indian government Sources of Funding for startups. Crowd funding, Self-funding, Venture Capitalists, Angel Investment. Banking support for startup business. Types of companies: Sole proprietorship company, Partnership company, Private Limited, Limited company etc.

**05 Hours**

#### Text Books:

1. Principles of Management – P. C.Tripathi, P.N. Reddy – Tata McGraw Hill,
2. Entrepreneurship Development - S.S.Khanka - S.Chand & Co.
3. Project Management by Sahni, Ane Books.

#### Reference books

1. Management Fundamentals - Concepts, Application, Skill Development - Robers Lusier - Thomson
2. Project Management for Business & Technology, Nicholas, PHI.

|   |  |
|---|--|
| <b>Unit I</b>   |  |
| <b>1. Crude Drugs, Medicinal and Aromatic Plants</b><br>Crude Drugs - Scope and Importance, Classification (Taxonomical, Morphological Chemical, Pharmacological); Collection and processing of Crude Drugs; Utilization of Medicinal and Aromatic Plants in India and world; Genetics as applied to Medicinal herbs; Biogenesis of Phytopharmaceuticals.   |  |
| <b>07 Hours</b>   |  |
| <b>2. Types of Phytochemicals</b><br>Carbohydrates and its derived products- Structures, types and extraction methods : Glycosides - Digitalis, Aloe, Dioscorea; Volatile Oils - Clove, Peppermint Oil; Alkaloids – classification and functions, Triterpenoids, Phenols, Quinines, Cinchona; Flavonoids-and Resins; Tannins (Hydrolysable and Condensed types). Application of phytochemicals in industry and healthcare; Antioxidants, Biocides, Biofungicides, Biopesticides. Case studies |  |
| <b>08 Hours</b>   |  |
| <b>Unit II</b>  |  |
| <b>3. Analysis of Phytochemicals</b><br>Methods of Drug evaluation (Morphological, Microscopic, Physical and Chemical); Preliminary screening, Assay of Drugs - Biological evaluation / assays, Microbiological methods, Chemical Methods of Analysis and Detection of Adulterants: Chemical estimations; Drug adulteration - Types of adulterants.   |  |
| <b>07 Hours</b>   |  |
| <b>4. Techniques for Extraction and characterization of phytochemicals</b><br>Extraction and characterization techniques, Cold extraction, hot extraction, Soxhlet apparatus, Solvents: Petroleum ether, chloroform, ethanol, water, Separation techniques: TLC, column, HPLC, Characterization techniques: UV spectra, IR spectra, GC/MS, HPTLC.   |  |
| <b>08 Hours</b>   |  |

### Unit III

#### 5. Herbal Products and regulation

History, Scope, and Current aspects of herbs and herbal medicines; Preparation of standardized extracts of Garcinea, Forskolin, Garlic, Turmeric and Capsicum, issues of licensing of herbal drugs. Herbal drug standardization: Regulatory bodies and guidelines, WHO and AYUSH guidelines.

**05 Hours**

#### 6. Herbal Informatics

Applications of informatics in Herbal medicine, Databases and Tools for listing of phytochemicals and their applications. Databases: Super Natural II, CMAUP, BATMAN, ZINC, PubChem, ChEBI, KNApSAcK. Tools : Openbabel, Chemtools, ChemDraw, PkCSM. Molecular docking and analysis. Tools : MGL tools, Autodock Vina, PLIP. Network pharmacology and its application. Tools and Databases: Cytoscape, BindingDb.

**05 Hours**

#### **Preamble:**

The engineering graduate's capstone project is an essential part of the curriculum structure which integrates all the skills acquired during all the theory and laboratory courses addressing Bioprocess Engineering and Molecular Biotechnology verticals. The capstone project work requires exhaustive literature survey to define the problem statement and research objectives. Various optimization strategies help the student to select the best alternative and feasible solution. Capstone project emphasizes on solving real time problems depicting societal benefits and industrial applications. Students gain hands on experience during their capstone Project implementation. Projects also facilitate students to present their work on different platforms likes seminars, national and international conferences. Capstone project help students in their jobs opening and higher studies as well in higher research careers.

#### **Guidelines:**

1. Capstone project has to be carried out in teams of four students.
2. Every team needs to maintain laboratory work book which contains details of all the work carried out in the laboratory.
3. Make entries in log books for instrument usage.
4. Adhere on timely report submission to the coordinator.
5. Provide requisitions beforehand for any project work

#### **Review committee:**

Review committee is formed by the project coordinator taking into consideration each review committee has faculty experts of all the domains. Review committee also consists of the guide of the respective project group.

#### **Project evaluation:**

| Sl. No | Phase                    | Marks | Review    |
|--------|--------------------------|-------|-----------|
| 1      | Concept generation phase | 10    | Committee |
| 2      | Preliminary design phase | 10    | Guide/s   |
| 3      | Definitive design phase  | 10    | Guide/s   |
| 4      | Final submission phase   | 20    | Committee |
| 5      | ESA                      | 50    | External  |
| TOTAL  |                          | 100   |           |

**Preamble:** Biotechnology engineering is a field of applied biology and chemical engineering principles that involves the use of living things in engineering, technology, medicine, and other useful applications. Biotechnology is one of the top fields of studies and employment, both from Indian and global perspectives. Aspiration for a core biotech employment calls for a hands on expertise and practical work experience. An internship opportunity is the first hand real time work experience for the graduates for acquiring the practical know-how that creates better career prospects. In fact, for biotechnology domain, training and internships are almost mandatory. Internships in biotechnology provide opportunities in research and development, manufacturing and production, quality control and assurance, technical support, and regulations and documentation. The significant outcome of biotech internship is a full spectrum of lab experience to develop analytical skills.

**Duration-** Jan-May During 8<sup>th</sup> semester (5 months Full time)

**Internship course-** Internship training

**Credit Weightage –** 6 credits

**Assessment:** Industry Training: ISA: 50 M, ESA 50 M [Total 100M]

**Reports:** Industry Training

#### **Stages of Internship process**

- 1. Identification of industry-** The major role of the internship coordinator is to identify suitable industry for student internships. The selection of an industry depends on several criteria like, reputation of the company, establishment and stability, products & research focus, infrastructure and instrumentation facilities that could be provided for interns, kind of projects that could be offered to students, student learning

opportunities etc. After studying the industry, the industry is recommended by coordinator for approval by the department head and members of committee. Justification is provided by the coordinator on suitability of the company. Well established industries and start up's are preferred for student internships. The department approved industry list is sent for consent approval to the university. The final approved list is recorded with the placement cell. The department and the coordinator are completely responsible for the internship process.

- 2. Internship evaluation-** The evaluation of the internship program is carried out by the identified industry guide/s for training (50 marks) and project (50 marks). The final evaluation of internship training (50 marks) and project (50 marks) is conducted by the department during ESA by external and internal examines. The students have to demonstrate the learning experience undergone during internship.
- 3. Internship feedback-** The performance of the interns and the internship is collected in the form of valuable feedback from the industry guides. The internship experience feedback is collected from the students after the completion of the internship to understand the industry requirements and gaps.
- 4. Development-** Based on the feedback from guides and students, the department is involved in strengthening the gaps and meeting the industry requirements.

**Preamble:** Biotechnology engineering is a field of applied biology and chemical engineering principles that involves the use of living things in engineering, technology, medicine, and other useful applications. Biotechnology is one of the top fields of studies and employment, both from Indian and global perspectives. Aspiration for a core biotech employment calls for a hands on expertise and practical work experience. An internship opportunity is the first hand real time work experience for the graduates for acquiring the practical know-how that creates better career prospects. In fact, for biotechnology domain, training and internships are almost mandatory. Internships in biotechnology provide opportunities in research and development, manufacturing and production, quality control and assurance, technical support, and regulations and documentation. The significant outcome of biotech internship is a full spectrum of lab experience to develop analytical skills.
