Vision and Mission of KLE Technological University

Vision

KLE Technological University will be a national leader in Higher Education—recognised globally for innovative culture, outstanding student experience, research excellence and social impact.

Mission

KLE Technological University is dedicated to teaching that meets highest standards of excellence, generation and application of new knowledge through research and creative endeavors.

The three-fold mission of the University is:

- To offer undergraduate and post-graduate programs with engaged and experiential learning environment enriched by high quality instruction that prepares students to succeed in their lives and professional careers.
- To enable and grow disciplinary and inter-disciplinary areas of research that build on present strengths and future opportunities aligning with areas of national strategic importance and priority.
- To actively engage in the Socio-economic development of the region by contributing our expertise, experience and leadership, to enhance competitiveness and quality of life.

As a unified community of faculty, staff and students, we work together with the spirit of collaboration and partnership to accomplish our mission.

Vision and Mission Statements of the School / Department

Vision

To be the most preferred branch of engineering through the highest order of excellence in teaching-learning and research with social commitment and responsibility.

Mission

- To create an outstanding learning experience through rigorous curriculum of theory and practice that develops students' technical and professional skills to succeed in a wide range of careers.
- To continually advance research through a culture of discovery, creativity, and innovation to benefit humankind
- To serve as highly capable resources to society, the profession through professional organizations, consultancy and continuing education.

Program Educational Objectives/Program Outcomes and Program-Specific Objectives

Program Educational Objectives -PEO's
Conceive, realize and design civil engineering infrastructure that is the backbone of growth and prosperity of mankind.
Plan, construct and maintain the built environment meeting the demands of humanity.
Assess the impact of civil engineering activities on economy, environment and society at large.
Work in team with moral, ethical and professional responsibilities.
Cultivate the aptitude for continuous learning and learn to adapt to the changing needs of the society.
Program Outcomes-PO's
Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialisation for the solution of complex engineering problems.
Problem analysis: Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.
Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
Communication: Communicate effectively on complex engineering activities with the engineering community and with the society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member

and leader in a team, to manage projects and in multidisciplinary environments.

Life-long learning: Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

Program Specific Objectives -PSO's

Proficiency in a specialized area: Demonstrate proficiency in one of the following specialized areas of Civil Engineering i) Construction Materials and Management ii) Structural and Geotechnical Engineering iii) Environmental, water resources and Transportation Engineering

Ability to apply principles of civil engineering for the entire life cycle of the project ranging from initial design to the closure of the project.

Ability to identify and analyze various properties of construction materials and their applications in design and construction of various structures.

Curriculum Structure-Overall

Semester		Total Program Credits: 179							
Course with course code	I	II	III	IV	V	VI	VII	VIII	
	Single variable calculus (5-0-0)	Multivariable calculus (5-0-0)	Laplace Transform and Statistics (4-0-0)	Numerical methods and Partial differential equations(4-0-0)	Structural Analysis-II (3-0-0)	Design of Steel Structures (3-0-0)	Pre-Stressed Concrete (3-0-0)	Program Elective - 6 (3-0-0)	Internship Training (0-0-6)
	Engineering Physics (3-0-0)	Engineering Chemistry (3-0-0)	Building Technology and Services (3-0-0)	Structural Analysis-I (4-0-0)	Geotechnical Engineering (3-0-0)	Estimation and Costing (3-0-0)	Program Elective -2 (3-0-0)	Open Elective – 1 (3-0-0)	
	Basic Electrical and Electronics Engineering (4-0-0)	Engineering Mechanics (4-0-0)	Surveying (4-0-0)	Environmental Engineering (4-0-0)	Design of RCC Structures (4-0-0)	Program Elective -1: (3-0-0)	Program Elective -3 (3-0-0)	Capstone Project / Internship Project (0-0-11)	
	Applied physics lab (0-0-1)	Problem Solving With Data Structures (0-0-3)	Mechanics of Fluids (4-0-0)	Concrete Technology (3-0-0)	Transportation Engineering (4-0-0)	PA &LR (3-0-0)	Program Elective -4 (3-0-0)		
	Basic Mechanical Engg (3-0-0)	Computer Aided Engineering Drawing (0-0-3)	Mechanics of Materials (4-0-0)	Construction Project Management (3-0-0)	Construction Economics & Management (3-0-0)	Industry Readiness and Leadership Skills (0.5-0-0)	Program Elective -5 (3-0-0)		
	Engineering Exploration (0-0-3)	Design Thinking For Social Innovation (0-1-1)	Engineering Geology (2-0-0)	Hydrology & Irrigation Engineering (3-0-0)	Arithmetical Thinking and Analytical Reasoning (0.5-0-0)	Geotechnical Engineering laboratory (0-0-1)	CIPE / EVS (Audit)		
	C programming for problem solving (0-0-3)	Professional Communication (1-1-0)	Survey Practice – I (0-0-1)	Survey Practice – II (0-0-1)	Highway Engg. Laboratory (0-0-1)	CEM Laboratory (0-0-1)	Senior Design Project (0-0-6)		
			Building Engineering Drawing (0-0-2)	Problem Solving and Analysis (0.5-0-0)	Environmental Engg. Laboratory (0-0-1)	Design Studio - Steel and RC Structures (0-0-2)	Construction Site Management Workshop (0-0-1)		
			Corporate Communication (0.5-0-0)	Engineering Computation Laboratory (0-0-1)	Computer Aided Design Laboratory (0-0-1)	Minor Project (0-0-6)			
			Material Testing Laboratory (0-0-1)	Concrete Laboratory (0-0-1)	Mini Project (0-0-3)

Curriculum Content- Course wise

Program: BE Civil Engineering		Semester: I
Course Title: Single Variable Calculus		Course Code:18EMAB101
L-T-P: 4-0-1	Credits: 05	Contact Hours:6
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3Hrs	
Unit I		
1. Functions, Graphs and Models		7hrs
Functions, types of functions, transformations and models (Linear, exponential, trigonometric). MATLAB: Graphing functions, Domain-Range and Interpreting the models		
2. Calculus of functions and models		13hrs
Limit of a function, Infinite limits- graph, Continuity and discontinuity, Intermediate value theorem statement, Roots of the equation using Bisection Method and Newton- Raphson Method Interpretation of derivative as a rate of change, All the rules of derivatives (List only), Maxima, Minima and optimization problems. Curvature and Radius of Curvature, Indeterminate forms, L- Hospital's rule-Examples MATLAB: optimization problems. Curvature problems		
Unit II		
3. Infinite Series		06 hrs
Definition, Convergence of series, Tests of convergence – p-series, Alternating series. Power series, radius of convergence, Taylor's and Maclaurin's series, Applications of Taylor's and Maclaurin's series MATLAB: Convergence of series		
4. Integral calculus		14 hrs
Tracing of standard curves in Cartesian form ,Parametric form and Polar form; Beta and gamma function, relation between them, evaluation of integrals using Beta and gamma functions; Applications to find arc length, Area, Volume and surface area (Cartesian, parametric and polar curves). Approximate integration- Trapezoidal rule, Simpson's 1/3 rule MATLAB: problems on arc length, area, volume and surface area		
Unit III		
5. Ordinary differential equations of first order		10 hrs
(a) Introduction to Initial Value problems. Linear and Bernoulli's equations, Exact equations and reducible to exact form, Numerical solution to Initial Value problems-Euler's method, Modified Euler's method and Runge-Kutta method (b) Applications of first order differential equations-Orthogonal trajectories growth and decay problems, mixture problems, Electrical circuits, falling bodies. MATLAB: Solve differential equations		
Text Books		
1.Early Transcendentals Calculus- James Stewart, Thomson Books, 7ed 2010.		
Reference Books:		
1.Calculus Single and Multivariable, Hughues-Hallett Gleason, Wiley India Ed, 4ed, 2009.		
2.Thomas Calculus, George B Thomas, Pearson India, 12ed, 2010

Program: BE Civil Engineering		Semester: I
Course Title: Engineering Physics		Course Code:15EPHB102
L-T-P: 3-0-0	Credits: 03	Contact Hours:03 Hrs./Week
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	Examination Duration: 3Hrs	
Unit I		
1. Concept of Motion - Kinematics in One Dimension		6hrs
Introduction, Motion Diagrams, The Particle Model, Position Model, Linear Velocity and Acceleration, Uniform Motion, Instantaneous Velocity, Finding Position from Velocity, Motion with Constant Acceleration, Free Fall Motion on an Inclined Plan, Instantaneous Acceleration, Numericals.		
2.Kinematics in Two Dimensions		6hrs
Introduction to Vectors, Properties of vectors, Coordinate Systems and Vector Components, Vector Algebra. Position, velocity and Acceleration vectors, Projectile Motion, Relative Motion, Uniform Circular Motion, Velocity and Acceleration in Uniform Circular Motion, Nonuniform Circular Motion and Angular Acceleration, Numericals.		
3.Force and Motion		4hrs
Concept of Force, Identifying Forces, A Virtual Experiment, Newton's First Law, Newton's Second Law, Free-Body Diagrams, Applications.		
Unit II		
4.Dynamics I		5hrs
Equilibrium using Newton's second Law, Friction, Drag, Newton's Third Law, Analyzing Interacting Objects, Newton's Third Law, Applications.		
5. Dynamics II		6 hrs
Motion in a plane, Dynamics in Two Dimension, Velocity and Acceleration in Uniform Circular Motion, Dynamics of Uniform Circular Motion, Fictitious Forces, Non-uniform Circular Motion, Numerical.		
6. Impulse and Momentum		5hrs
Momentum and Impulse, Problems, Conservation of Momentum, Inelastic Collisions, Explosion, Momentum in Two Dimension, Numericals.		
Unit III		
7. Energy and Work		8hrs
Energy: Kinetic Energy and Gravitational Potential Energy, Restoring Forces, Hooke's Law, Elastic Potential Energy, Elastic Collisions, Energy Diagrams, Work: Work and Kinetic Energy, Force, Work and Potential energy, Conservation of Energy, Power, Numericals.		
Text Books		
1.John W Jewett and Raymond A Serway, Physics for Scientists and Engineers with modern physics,, Cengage publication, India Edition, 8th Edition.		

Reference Books:

1. Randall D Knight, Physics for Scientists and Engineers, Pearson publication, 2nd Edition.
2. Hans C Ohanian and John T Markert, Physics for Engineers and Scientists, W W Norton and Company, Volume 1, 3rd Edition

Program: BE Civil Engineering		Semester: I
Course Title: Basic Mechanical Engineering		Course Code:15EMEF101
L-T-P: 3-0-0	Credits: 03	Contact Hours:4 hrs /week
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	Examination Duration: 3Hrs	
Unit I		
1. Introduction to Mechanical Engineering.		3hrs
Definition of engineering, Mechanical Engineering, Branches of Mechanical Engineering, Who are Mechanical Engineers?, Mechanical Engineers' top ten achievements.		
2. Manufacturing Engineering: Basics of Manufacturing		13 hrs
What is manufacturing?, The main manufacturing sectors, The importance of the main manufacturing sectors to the Indian economy, Scales of production Classification of manufacturing Processes. Advances in Manufacturing: CNC machines, Mechatronics and applications		
Unit II		
3. Design Engineering: Power Transmission Elements		11 hrs
Overview Design Application: •Belt Drives. Types, Length of Belt. Velocity Ratio, Initial Tension. Ratio of Tensions. Power Transmitted, Numerical Problems. •Gears. Spur Gear, Rack and Pinion, Worm Gear, Bevel Gear, Helical Gears. Speed, Torque, and Power in Gear pair. Simple and Compound Gear trains. Numerical Problems. •Ball and Roller Bearings, Types, Applications.		
4. Thermal Engineering 1: Prime Movers.		05 hrs
Internal Combustion Engines: Classification, IC engine parts, 2 stroke SI and CI engine, 4 Stroke SI and CI Engine, PV diagrams of Otto and Diesel cycles, Comparison of 2 stroke and 4 stroke engine, comparison of CI and SI engine, Problems on Engine Performance, Future trends in IC engines.		
Unit III		
5. Thermal Engineering 2: Thermal Systems' Applications		06 hrs
Refrigeration system, Air conditioning system, Pumps, Blowers and Compressors, Turbines, and their working principle and specifications.		
Text Books		
1. Jonathan Wickert and Kemper Lewis, An Introduction to Mechanical Engineering, Third Edition, 2013- Cengage Learning.4 2. K.R.Gopalkrishna, SudhirGopalkrishna, S.C. Sharma. A Text Book of Elements of Mechanical Engineering, 30th Edition, Oct 2010,–Subhash Publishers, Bangalore.		
Reference Books:		

1. Course Material developed by the Department of Mechanical Engineering.
2. SKH Chowdhary, AKH Chowdhary, Nirjhar Roy, The Elements of Workshop Technology - Vol I &II , 11th edition 2001, Media Promoters and Publishers.
3. Basic Manufacturing, Roger Timings, Third edition, Newnes, An imprint of Elsevier

Program: BE Civil Engineering		Semester: I
Course Title: Basic Electrical and Electronics Engineering		Course Code:21EEXF101
L-T-P: 4-0-0	Credits: 04	Contact Hours:6 hrs /week
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:47	Examination Duration: 3Hrs	
Unit I		
1. Introduction to Electrical & Electronics Technology		2 Hrs
Electrical Power Generation (convention and renewable energy sources, with PV elaborated), transmission, distribution, utilization (Electric Vehicle as a case study), Electrical and Electronic Systems, concept and power of abstraction, lumped circuit abstraction, and its limitation.		
2. The Circuit Abstraction		10 Hrs
Energy storage and dissipating elements (RLC), Ideal and practical sources, series and parallel circuits, concept of order of the system, voltage dividers, RC, RL, RLC with KCL and KVL, Mesh and Nodal analysis with an example.		
3. Introduction to Transformer and Electric Drive		10 Hrs
Electromagnetic principles, classification of electric machines – static and rotary, transformers, motors, PMDC, stepper, BLDC, single and three-phase induction motors, selection of motors for various applications. Safety measures.		
Unit II		
4. Semiconductor Devices and its Applications		10 Hrs
Fundamentals of semiconductors, PN junction diode, BJT, FET, Thyristors, Integrated circuits, Linear application – Transistors and Operational amplifiers, oscillators (Op-Amp based), Nonlinear application – Power electronics converters.		
5. Digital Abstraction		10 Hrs
Concept of digital abstraction, Number systems, base conversion – binary, decimal, hexadecimal, BCD, Gray code, Boolean algebra, logic gates, combinational circuits, - half adders, full adders, half subtractor and full subtractor using k-maps for 2 or 3 variables, sequential circuits – registers, counters.		
6. Mechatronic Subsystem		5 Hrs
Power supply, Introduction to sensors and actuators, signal conditioning and interfacing, Control logic design for mechatronic applications.		
Text Books		
1.Anant Agarwal and Jefferey H. Lang, Foundations of Analog and Digital Electronic Circuits, Morgan Kaufmann -Elsevier, 2005		
2.Hughes, Electrical and Electronic Technology, 12th Edition, Pearson, 2016.		
Reference Books:		
1. N.P.Mahalik, Mechatronics - Principles, Concepts and Applications, Tata McGraw-Hill, 2011

Program: BE Civil Engineering		Semester: I
Course Title: C Programming for Problem Solving		Course Code:18ECSP101
L-T-P: 0-0-3	Credits: 03	Contact Hours:6 hrs per week
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:78	Examination Duration: 3Hrs	
Unit I		
1. Introduction to Problem solving		
Introduction to algorithms / flowcharts and its notations, top down design, elementary problems		
2. Basics of C programming language		
Characteristics and uses of C, Structure of C program, C Tokens: Keywords, Identifiers, Variables, Constants, Operators, Data-types, Input and Output statements.		
3. Decision control statements		
Conditional branching statements: if statement, if else statement, else if ladder, switch statement, unconditional branching statements: break, continue.		
Introduction to Debugging Skills		
Introduction to Test Driven Programming.		
4. Iterative statements		
while, do while, for, nested statements		
5. Functions		
Introduction, Function declaration, definition, call, returns statement, passing parameters to functions, introduction to macros.		
Introduction to Coding Standards		
6. Arrays and Strings		
Introduction, Declaration, Accessing elements, Storing values in arrays, Operations on one dimensional array, Operations on two dimensional arrays,		
Introduction to Code Optimization and refactoring		
7. Pointers		
Introduction, declaring pointer, pointer variables, pointer expression and arithmetic, passing arguments to functions using pointers, pointers and arrays, passing an array to a function.		
8. Structures and Unions		
Introduction, passing structures to functions, Array of structures, Unions		
Text Books		
1. R.G.Dromey, How to Solve it by Computer, 1ed, PHI, 2008.		
2. Yashvant Kanetkar, Let us C ,15th ed, BPS Publication, 2016.

Program: BE Civil Engineering		Semester: II
Course Title: Multivariable calculus		Course Code:18EMAB102
L-T-P: 4-1-0	Credits: 05	Contact Hours:5
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3Hrs	
Unit I		
1.Partial differentiation		12 hrs
Function of several variables, Partial derivatives, Level curves, Chain rule, Errors and Approximations. Extreme value problems. Lagrange's multipliers.		
2.Double integrals		08hrs
Double integrals- Rectangular and polar coordinates, Change the order of integration. Change of variables, Jacobian. Application of double integrals		
MATLAB: optimization problems, application of double integrals		
Unit II		
3. Triple integrals		07 hrs
Triple integrals, Cartesian, change to Cylindrical and Spherical coordinates Application of Triple integrals		
4. Calculus of Vector Fields		13 hrs
Vector fields, Gradient and directional derivatives. Line and Surface integrals. Independence of path and potential functions. Green's theorem, Divergence of vector field, Divergence theorem, Curl of vector field. Stokes theorem.		
MATLAB: application of Triple integrals, Vector calculus problems		
Unit III		
5. Differential equations of higher orders		(5+5) hrs
(a) Linear differential equations of second and higher order with constant coefficients. The method of Variation of parameters. Initial and boundary value problems.		
(b) Applications of second order differential equations-Newton's 2nd law, electrical circuits, Simple Harmonic motion. Series solution of differential equations. Validity of Series solution of Differential equations.		
MATLAB: application of differential equations		
Text Books		
1.Early Transcendental Calculus- James Stewart, Thomson Books, 7ed 2010		
Reference Books:		
1.Calculus Single and Multivariable, Hughes-Hallett Gleason, Wiley India Ed, 4ed, 2009.		
2.Thomas Calculus, George B Thomas, Pearson India, 12ed, 2010

Program: BE Civil Engineering		Semester: II
Course Title: Engineering Mechanics		Course Code:15ECVF102
L-T-P: 4-0-0	Credits: 04	Contact Hours:04 Hrs./Week
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3Hrs	
Unit I		
1. Overview of Civil Engineering		4hrs
Evolution of Civil Engineering Specialization, scope and role. Impact of Civil Engineering on National economy, environment and social & cultural fabric. Challenges and Opportunities for Civil Engineers Civil Engineering Marvels, Future challenges, Higher education and Research.		
2. Coplanar concurrent force system		12hrs
Introduction to Engineering Mechanics: Basic idealizations – Particle, Continuum, Body, Rigid body, Deformable body, Definition of force and its elements; Laws of Mechanics – Parallelogram law of forces, Principle of transmissibility, Law of Superposition, Newton's laws of motion. Classification of force systems, Resultant of coplanar concurrent force system: Definitions – Resultant, composition & Resolution of a force, Equilibrium, Equilibrant, Formulae for resultant of forces and resolution of a force. Numerical problems on resultant of forces. Equilibrium of coplanar concurrent force system: Conditions of equilibrium, Action & Reaction, Free body diagram, Lamis' theorem. Numerical problems on equilibrium of forces.		
3. Coplanar non-concurrent force system		5hrs
Resultant of a force system: Moment, moment of a force, couple, moment of a couple, Characteristics of couple, Equivalent force-couple system, Numerical problems on moment of forces and couples, on equivalent force-couple system. Varignons principle of moments, Resultant of coplanar- non-concurrent force systems and numerical problems.		
Unit II		
4. Equilibrium of a force system (Chapter 3 contd..)		5hrs
Conditions of equilibrium, types of support and loading for a statically determinate beam, Reactions at support connections, Numerical problems on equilibrium of force systems and support reactions for a statically determinate beam.		
5. Static Friction		8hrs
Introduction, types of friction, definition, limiting friction, coefficient of friction, laws of Coulomb friction, angle of friction and angle of repose, cone of friction. Wedge and belt friction theory. Derivation of belt friction formula. Numerical problems on, impending motion on horizontal and inclined planes (including connected bodies); wedge friction; Ladder friction and Belt friction.		
6. Centroid of Plane Figures		5hrs
Introduction, Definition, Methods of determining the centroid, axis of reference, axis of symmetry, Locating the centroid of simple plane figures (triangle, semicircle, quarter of a circle and sector of a circle etc..) using method of integration, Numerical problems on Centroid of simple built up sections.		

Unit III

7. Second moment of area (Plane figures)

5hrs

Introduction, Definition, Method of determining the second moment of area, Section Modulus, Radius of gyration, perpendicular and Parallel axis theorems, Polar second moment of area, second moment of area of simple plane figures (triangle, rectangle, semicircle, circle etc.,) using method of integration, Numerical problems on MI of simple built up sections.

8. Kinetics of a particle- Work, Power, Energy

6hrs

Introduction – Kinematics and Kinetics, Definitions – work, power and energy. Work done by a force (constant, gravitational and spring forces) in rectilinear motion. Numerical problems, Kinetic energy of a particle, principle of work and energy.

Text Books

1. Beer, F.P. and Johnston, R., Mechanics for Engineers: Statics, McGraw Hill Company, New York, 1988.

Program: BE Civil Engineering		Semester: II
Course Title: Computer Aided Engineering Drawing		Course Code:15EMEP101
L-T-P: 0-0-3	Credits: 03	Contact Hours:06 Hrs./Week
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:50	Examination Duration: 3Hrs	
Unit I		
1: Introduction to engineering drawing and orthographic projections.		8hrs
(Manual Drafting)		
i)Introduction to engineering drawing – BIS conventions.		
ii)Orthographic projections: first angle projection and third angle projection – symbolic representation.		
iii)Projections of points.		
iv)Projections of lines inclined to both the planes and determination of true length by rotating the view method (Problems on traces of a line and mid-point problems are not included). However application problems are included.		
v)Projection of planes: Planes parallel to one plane and perpendicular to other plane or perpendicular to one plane and inclined to other plane (Two stage problems).		
vi)Projection of simple solids such as prisms, pyramids, cylinders, cones and sphere and their frustums in simple positions (Base parallel to or in one of the three planes).		
2. Development of lateral surfaces of solids. (MANUAL)		7hrs
i)Development of lateral surface of prisms and cylinders (Either full or truncated using parallel line development method)		
ii)Development of lateral surface of pyramids and cones (Either full or truncated or of their frustums using radial line development method)		
iii)Development of lateral surfaces of spheres using both the methods and development of transition pieces.		
3. Conversion of pictorial views into orthographic projections using CAD software.		6hrs
Drawing orthographic projection of objects shown in pictorial views by first angle method of projection using CAD software. (2D drafting only)		
4. Isometric projection or view using CAD software.		4hrs
Drawing isometric projections or views of objects shown in orthographic projections using CAD software.		
Text Books		
1.Text Book of Engineering Drawing by K R Gopalakrishna		
2.Text Book of Engineering Drawing by N D Bhatt and V M Panchal

Program: BE Civil Engineering		Semester: II
Course Title: Engineering Chemistry		Course Code:15ECHB101
L-T-P: 3-0-0	Credits: 03	Contact Hours:40
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:03	Examination Duration: 3Hrs	
Unit I		
1. Pure substances		08 hrs
Properties of pure substance (Steam), two property rule, T-H diagram, formation of steam at constant pressure. Different states of steam: Wet steam-dryness fraction, determination by separating-throttling calorimeter, Dry saturated steam, Superheated steam, thermodynamic parameters of steam, steam table, numerical problems.T-V, P-V & P-T diagrams of pure substance taking water as example. Triple point & critical point. Sub-cooled liquid, saturated liquid, mixture of saturated liquid & vapor, Saturated vapor & superheated vapor states.		
2. Real and ideal gases		05 hrs
Properties of Real and Ideal gases. Vander Waal's equation, Vander Waal's constant in terms of critical properties –numerical problems. Compressibility factor, compressibility chart and Law of corresponding state. Ideal gas: equation of state, internal energy and enthalpy as functions of temperature. Ideal gas mixture: Dalton's law of additive pressures and Amagat's law of additive volumes. Terms used in the analysis of mixture of gases - numerical problems.		
3. Engineering Materials		03 hrs
Ferrous metals – properties and applications of Iron and Steel. Ferrous metal s – properties and Applications of copper and aluminium. Cement- properties, mechanism of setting & hardening of cement and applications.Lubricants- Properties –viscosity, flash point, fire point, cloud point and pour point, mechanism-hydrodynamic and boundary lubrication and applications.		
Unit II		
4. Fuel Chemistry		06Hrs
Fuels, classification, determination of calorific value of a fuel (solid / liquid fuel by Bomb calorimeter), coal analysis- Numerical problems. Petroleum - cracking, Octane number, Cetane number, reforming, and mechanism of knocking in Petrol and Diesel engines. Renewable energy sources – power alcohol and bio diesel.		
5. Energy Storage and Conversion Systems		06Hrs
Electrode potential, Nernst equation, Formation of a cell; Reference electrodes – Calomel electrode and Determination of electrode potential using calomel electrode, numerical problems on E, Ecell,, E0cell. Batteries: Classification, characteristics, Lead-acid and Li ion batteries. Fuel cells: Methanol-O2 fuel cell.		
6. Surface Chemistry		04Hrs
Corrosion: Electrochemical theory of corrosion taking iron as an example; corrosion control – galvanization and tinning. Metal Finishing: Technological importance of metal finishing, Electroplating, factors affecting nature of electrodeposit- Throwing power of plating bath solution- numerical problems.		

Electro less plating – advantages over electroplating, electro less plating of copper and its applications in the manufacture of printed circuit board.

Unit III

7. Polymers

04 Hrs

Introduction, free radical mechanism of addition polymerization taking Ethylene as an example; commercial polymers - Plexi glass, polyurethane and polystyrene. Adhesives – synthesis, properties as applications of Epoxy resins; Polymer Composites - structure, properties and applications of Kevlar and carbon fiber.

8. Environmental Chemistry

06 Hrs

Water: Sources and ill effects of water pollutants- fluoride and nitrate; Determination of total hardness of water by EDTS method – numerical problems. Sewage: Determination of biological oxygen demand by Winkler's method – numerical problems and determination of chemical oxygen demand - numerical problems,

L-T-P: 0-0-2	Credits: 02	Contact Hours: 42
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours: 42	Examination Duration: 3Hrs	
Unit I		
1. Basics- English Communication		9 hrs
Course Introduction, Explanation of template mix-ups with correct usages & necessity of grammar in error detection, Usage of tenses		
2. Vocabulary and grammar		6 hrs
Vocabulary, Word Formation and Active and Passive Voice		
3. Bouncing Practice		6 hrs
Definition and types of bouncing and its practice with examples, reading skills, free style speech. Individual presentation.		
4. Rephrasing and Structures		8 hrs
Comprehension and Rephrasing, PNQ Paradigm and Structural practice		
5. Dialogues		3 hrs
Introduction of dialogues, Situational Role plays,		
6. Business Communication		9 hrs
Covering letter, formal letters, Construction of paragraphs on any given general topic.		
Reference Books:		
1.Collins Cobuild Advanced Learner's English Dictionary		
2.Raymond Murphy - Intermediate English Grammar, Cambridge University Press		
3.Martin Hewings- Advanced English Grammar, Cambridge University Press.

Course Title: Problem Solving with Data Structures		Course Code:18ECSP102
L-T-P: 0-0-3	Credits: 03	Contact Hours:6 hrs / week
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:78	Examination Duration: 3Hrs	
Unit I		
1.Introduction to Data Structures		15 Hrs
Review of C: Structures, Pointers, Dynamic Memory Allocation and File Manipulation Operations, Introduction to Data Structures, Data structure Operations.		
2.Lists		18 Hrs
Concept of lists: Abstract data type, Definition, Representation of linked lists in Memory, Variants of Lists: Singly Linked List, Doubly Linked lists, Circular linked lists, Operations: Traversing, Searching, Insertion and Deletion. Applications of Linked lists – Polynomials, long integer addition and other applications.		
3.Stacks and Recursion		18 Hrs
Stack: Definition, Operations, Stack ADT Implementation of stack operations. Polish notation: Infix to postfix conversion, evaluation of postfix expression, parenthesis matching and other applications. Recursion		
4.Queues		15 Hrs
Queue: Definitions, Queue ADT, Variants of Queues: Linear queue, circular queue, priority queue, double ended queue and multiple queues. Applications of queue.		
5.Binary trees		12 Hrs
BinaryTree: Definition, Terminology and representation, Binary Search Tree:Traversals and its applications.		
Text Books		
1.Data Structures Using C and C++ - Y. Langsam, M. Augenstein And A. M. Tenenbaum, Prentice - Hall of India Pvt. Ltd. Edition- 2, 2006

L-T-P: 0-1-1	Credits: 02	Contact Hours:4 hrs / week
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:38	Examination Duration: 3Hrs	
Unit I		
1.Introduction		2 Hrs
Introduction to Design thinking through case studies; Its Significance, Goals, and phases		
2.Empathy		6 Hrs
What is Empathy, Need for Empathy, Ways to empathize, interaction protocol, Interview questionnaire for target groups, and Empathy map		
Community Visit		6 Hrs
Social challenge identification		
3.Define		6 Hrs
Stakeholders and their needs, Stakeholder personas, Problem definition and its scope, Point of View (PoV).		
4.Ideate		6 Hrs
Significance of ideation; Systems perspective to a solution: Cause & Effect, Input-Process-Output, Past-Present-Future; Tools to ideate: Brainstorming and SCAMPER; Idea Evaluation		
5.Prototype		6 Hrs
Significance of Prototyping, Generation of specifications, User-centric approach to finalizing specifications, Prototype-building		
6.Testing		4 Hrs
Test plan, User-experience feedback and iteration process; Refining solution using Plan, do, Check and Act model; Identify limitations and scope for further improvement		
Community Visit		2 Hrs
Stakeholder interaction and feedback

Program: BE Civil Engineering		Semester: III
Course Title: Laplace transforms and Statistics		Course Code:20EMAB202
L-T-P: 4-0-0	Credits: 04	Contact Hours:4
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:50	Examination Duration: 3Hrs	
Unit I		
1. Laplace Transforms		10 Hrs
Definition, transforms of elementary functions- transforms of derivatives and integrals- Properties. Periodic functions, Unit step functions and Unit impulse functions. Inverse Transforms- properties- Initial and Final value theorems, examples, Convolution Theorem. Applications to differential equations.		
2. Curve fitting and regression		05 Hrs
Introduction to method of least squares, fitting of curves $y = a + bx$, $y = ab^x$, $y = a + bx + cx^2$ Correlation and regression. Applications to Civil Engineering problems: fluid flow through a pipe problem-using curve.		
3. Probability		05 Hrs
Definition of probability, addition rule, conditional probability, multiplication rule, Baye's rule. (no proof)		
Unit II		
4. Random variable and Probability distributions		05 Hrs
Discrete and continuous random variables- PDF-CDF- Binomial, Poisson and Normal distributions (Problems only).		
5. Tests of hypothesis		15 Hrs
Sampling, Sampling distribution, Standard error, Null and alternate hypothesis, Type -I and Type- II errors, Level of significance. Confidence limits, testing of hypothesis for single mean and difference of means (large samples). t-test (test for single mean, paired t-test), Chi Squared distribution, analysis of variance (one-way and two-way classifications). Case studies of designs of experiments (CRD, RBD). Applications to civil Engineering problems		
Unit III		
6. Simulation		10 Hrs
Introduction, methodology of simulation, simulation models, Event type simulation, Generation of random numbers, Monte Carlo simulation, Simulation of Inventory Problems, Simulation of Queuing system, Simulation of Networks.		
Text Books		
1 J. Susan Milton, Jesse C. Arnold, Introduction to Probability and Statistics: Principles and Applications for Engineering and the Computing Sciences, 4 th Ed, TATA McGraw-Hill Edition 2007.		

2. Kreyszig, E, Advanced Engineering Mathematics, 8ed, John Wiley & sons, 2003.
3. Kishor S Trivedi, probability and statistics with reliability queuing and computer science applications, PHI, 2000

Reference Books:

Program: Civil Engineering		Semester: III
Course Title: Building Technology and Services		Course Code:15ECVC201
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1. Components of a Building		05 hrs
Introduction, types of buildings as per National Building Code (NBC). Components of a building – Foundations; Reinforced Cement Concrete (RCC) components like columns, beams, slabs; Floor structures; Roof structures; Doors, windows and other openings; Building finishes.		
2. Building Materials		07 hrs
Introduction. Properties of concrete and its ingredients, Building stones, Clay products, Bricks, Concrete and Mud blocks, Tiles, Timber, Plywood, Plastics, Glass, Paints, Steel, Gypsum and allied products, Adhesives.		
3. Types of Foundations		04 hrs
Preliminary investigations of soil, Presumptive bearing capacity of soils. Requirements and applications of Masonry footings, Isolated footings, Grillage footings, Strap footings, Raft foundations, Pile foundations.		
Unit II		
4. Stone and Brick Masonry		03 hrs
Rubble masonry, Ashlar masonry, Bonds in brick work (English and Flemish bond). Load bearing and partition walls. Damp proof construction.		
5. Floors and Roofs		03 hrs
Flooring: Types of flooring (Materials and method of laying), Granolithic, Mosaic, Ceramic, Marble, Polished Granite, Industrial flooring. Roofing: Types - Flat Roof (R.C.C.), Sloped roof (R.C.C. and Tile roof), Lean to roof, Steel trusses, Water and Weather proof course.		
6. Doors, Windows and Stairs		04 hrs
Doors: Types - Paneled doors, Glazed doors, Flush doors, Collapsible and rolling shutters, Louvered doors, Revolving, sliding and swing doors. Windows: Types - Paneled, Glazed, Bat window, Dormer window, Louvered and corner window, Ventilators. Stairs: Types (Classifications) and technical terms in stairs, Requirements of a good stair. Geometric Design of RCC Dog Legged and open well stairs. (Plan and sectional elevation of stairs).		
7. Plastering and Painting		05 hrs
Plastering: Purpose of Plastering, Materials of plastering, Lime mortar, Cement Mortar, Methods of plastering, Stucco plastering, Lath plastering. Painting: Purpose of Painting, Distemper, Plastic emulsion, Enamel, Powder coated painting to walls and iron and steel surfaces.		

Unit III

8. Building Services

03 hrs

Plumbing Services - Water Distribution, Sanitary – Lines and Fittings. Ventilations - Functional requirements systems of ventilations. Air-conditioning – Essentials and Types; Acoustics – characteristic – absorption – Acoustic design; Fire Hazards -Fire protection.

9. Modern and Sustainable Practices in Building Technology

06 hrs

Pre-fabrication techniques, Precast doors and windows (Precast frames and shutters), Hollow concrete blocks, Stabilized mud blocks, Micro concrete tiles, Precast roofing elements, Water – proofing, Fire resistance.

Concept of Green Building, Energy efficiency and water conservation in buildings, Greenhouse effects with cement and other conventional materials, Need for Sustainable building materials, Sustainable alternatives, Resource conservation by utilizing marginal materials from industry and mining, Flyash blocks, Bamboo as a flooring and roofing material, Sustainable design concepts – Daylighting, Natural ventilation, Solar roof panels. Zero – VOC (Volatile Organic Compounds) Paints, Natural and organic alternatives.

Program: Civil Engineering		Semester: III
Course Title: Surveying		Course Code:15ECVC202
L-T-P: 4-0-0	Credits:4	Contact Hours:4hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1. Overview and Measurement of directions		05 hrs
Basic principle of surveying, classification of surveying, Measurement of distance, chain surveying. Types of chains tapes. Errors in chain surveying. Introduction of map sheet numbering, coordinate and map projection. Compass surveying: Bearings and their types. Calculation of included angles from bearings. Corrections to measured bearings – local attraction. Plotting a traverse, closing error and its adjustment by Bowditch’s rule. Traverse computations – Latitude and departure (omitted measurements).		
2. Measurement of elevations and contouring		07 hrs
Levelling - Terminologies, Types of levelling instruments, Temporary adjustments. Methods of calculating reduced levels – HI method and rise and fall method. Types of leveling, Correction for curvature and refraction, sensitiveness of bubble tube. Contours and contouring, characteristics of contours, contour interval, Contouring methods – Direct and indirect. Interpolation of contours. Preparation of contour maps. Applications of contour maps.		
3. Theodolite surveying and Trigonometric levelling		06 hrs
Theodolite surveying, terminologies used in theodolite, parts of a vernier theodolite, temporary adjustments. Measurement of horizontal angle, vertical angle and other theodolite applications. Theodolite traversing, locating landscape details. Trigonometric Levelling: Basic principles, calculation of heights and distances using single plane method and double plane method		
Unit II		
4. Curve surveying		08 hrs
Types of curves, circular curve-terminologies, elements of a simple curve, methods of setting out simple curve- linear method, angular method; compound curves- elements of a compound curve, setting out of compound curve; Reverse curve-element of elements of a reverse curve, setting out of reverse curve; Transition curve- requirements of a transition curve, elements of transition curve, setting out of transition curve.		
5. Modern Surveying Instruments:		08 hrs
Theodolite, EDM and Total Station Modern theodolites- Micro-optic theodolites, digital theodolite Electromagnetic spectrum radar, electromagnetic distance measurement (EDM), EDM equipment- Geodimeter, tellurometer, mekenometer, distomat. Corrections to measurements; Total station- principles and working, temporary adjustments, application-angle measurement, distance measurement (horizontal, vertical and slope)		

6. Areas and Volumes
06 hrs

Computation of areas: Area from co-ordinates, latitude and departures, Mid-ordinate method, average ordinate method, Trapezoidal rule, Simpson's rule, Computation of volumes: Volumes from cross sections, Prismoidal formula, and Trapezoidal formula capacity of reservoirs volume of borrow pits. Laying out buildings

Unit III
7. Introduction to Photogrammetry and Remote Sensing
05 hrs

Terrestrial and Aerial photographs, Photo interpretation, Stereoscopy.
Remote Sensing: Principle, Idealized remote sensing system, Types, applications. Introduction and applications of LIDAR.

8. Modern methods of Surveying
05 hrs

Satellite-based positioning system, Global Positioning System (GPS), basic principles, satellite configuration, positioning using satellite signals, receivers; precise time and accuracy, Differential Global Positioning System (DGPS), and its applications in surveying, Introduction to GIS (Geographic Information System): Components, software, data, users, features, subsystems, data acquisition, data processing and analysis, operations, and Applications of GIS in civil engineering.

Program: Civil Engineering		Semester: III
Course Title: Mechanics of Fluids		Course Code:15ECVF201
L-T-P: 4-0-0	Credits:4	Contact Hours:4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1. Fluid Properties and Classification of Fluid		05 hrs
Introduction to fluid mechanics, Systems of units, Properties of fluid - Mass density, Specific Volume, Specific Weight, Relative density, Viscosity, Newton's law of viscosity, Compressibility, Vapor pressure, Surface tension, Capillarity. Newtonian and Non-Newtonian Fluids, Ideal and Real fluids.		
2. Fluid Pressure and its Measurement		05 hrs
Definition of pressure with its units and dimensions, pressure at a point. Pascal's law, Hydrostatic pressure law. Different types of pressures, Measurement of pressure, Classification- Simple manometers, Differential manometer and Micro Manometer		
3. Hydrostatics		05 hrs
Definition of total pressure, Center of pressure, Centroid, depth of center of pressure, Hydrostatic force on plane surface submerged horizontally, vertically and inclined. Hydrostatic force on submerged curved surface. Archimedes principle.		
4. Kinematics of Fluids		05 hrs
Description of fluid flow - Lagrangian and Eulerian approaches. Classification of flow; Definition of path line, streamline, streak line, stream tube. Acceleration of flow in one dimensional flow. Continuity equation in differential form. Velocity potential, Stream functions, Stream line, Equipotential line. Relation between velocity potential and stream function. Laplace equation.		
Unit II		
5. Dynamics of Fluid Flow		08 hrs
Concept of inertia force and other forces causing motion. Derivation of Euler's equation and Bernoulli's equation with assumption and limitation. Application of Bernoulli's equation on Venturimeter, Orifice meter, Pitot tube. Experimentation on: Verification of Bernoulli's equation.		
6. Flow through Pipes and open Channels		12 hrs
Introduction; Reynolds number, Definition of hydraulic gradient, energy gradient. Major and minor losses in pipe flow, Equation for head loss due to friction (Darcy's-Weishbach equation). Uniform flow in open channels, Geometric properties of Rectangular, Triangular, Trapezoidal and Circular channels. Chezy's equation, Manning's equation. Most economical open channels. Specific energy of flowing liquid, type of flows. Experimentation: Minor losses in pipes.		
Unit III		
7. Dimensional Analysis and Model Studies		05 hrs
Introduction, Systems of units, Dimensions of quantities, Dimensional Homogeneity of an		

equation. Analysis- Raleigh's method, Buckingham's Π theorem. Non-dimensional numbers: Froude Models, Reynold's models

8. Discharge Measurements

05 hrs

Flow through orifices and its classification, hydraulic coefficients and their relationship, Flow through mouthpieces and its classification. Classification of notches and weirs. Discharge over rectangular, triangular and trapezoidal notches or weirs. Discharge over a broad crested weir, Ogee weir and submerged weir. Current meter and its applications. Estimation of discharge with electronic or sensor devices.

Program: Civil Engineering		Semester: III
Course Title: Mechanics of Materials		Course Code:15ECVF202
L-T-P: 4-0-0	Credits: 4	Contact Hours: 4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1: Simple Stress and Strain.		05 hrs
Introduction, FBD & Equilibrium Equations Properties of Materials, Stress, Strain, Hooke's law, Poisson's Ratio, Stress – Strain Diagram for structural steel, concrete and non-ferrous materials, Elastic constants, relationship among elastic constants, Principles of superposition, Deformation of Prismatic bar, Elongation due to self – weight.		
2: Compound Stress and Strain		09 hrs
Composite section, Volumetric strain, expression for volumetric strain, Stress components on inclined planes, General two-dimensional stress system, Principal planes and stresses, Mohr Circle. Thermal stresses (including thermal stresses in compound bars), thin cylinders subjected to pressure, change in length, diameter and volume, thick cylinders.		
3: Bending Moment and Shear Force in Beams		06 hrs
Introduction, Types of beams, loads and supports, Shear force and Bending moment, Relationship between load, shear force and bending moment, SFD and BMD with salient values for cantilever beams & simply supported beams subjected to point loads, UDL, UVL and Couple.		
Unit II		
4: Bending Moment and Shear Force in Frames		06 hrs
SFD and BMD with salient values for Overhanging beams & Portal Frames subjected to point loads, UDL, UVL and Couple.		
5: Stresses in Beams		06 hrs
Introduction – Assumptions in simple bending theory, Pure bending, Bending stress in beam, Section modulus, Flexural rigidity, Expression for shear stress in beams, Bending & Shear stress diagram for rectangular, 'I' and 'T' section.		
6: Deflection of Beams		06 hrs
Introduction – Definitions of slope & deflection, Elastic curve derivation of differential equation of flexure, Sign convention, Slope and deflection for standard loading classes using Macaulay's method for prismatic beams and overhanging beams subjected to point loads, UDL and Couple.		
Unit III		
7: Torsion of Circular Shafts		05 hrs
Introduction – Pure torsion-torsion equation of circular shafts, Strength and stiffness, Torsional rigidity and polar modulus, Power transmitted by shaft of solid and hollow circular sections.		
8: Columns and Struts		07 hrs
Introduction – Short and long columns, Assumptions made in Euler's theory on columns, Effective length, slenderness ratio, radius of gyration, buckling load, derivations of Euler's		

Buckling load for different end conditions, Limitations of Euler's theory, Rankine's formula and problems.

Program: BE Civil Engineering		Semester: III
Course Title: Engineering Geology		Course Code:16ECVF203
L-T-P: 2-0-0	Credits: 2	Contact Hours:02
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:30	Examination Duration: 3Hrs	
Unit I		
1. Physical Geology		05 Hrs
Geology in civil engineering – branches of geology – structure of earth and its composition – weathering of rocks – scale of weathering – soils – landforms and processes associated with river, wind, groundwater and sea – relevance to civil engineering. Plate tectonics.		
2. Minerology		03 Hrs
Physical properties of minerals – Quartz group, Feldspar group, Pyroxene – hypersthene and augite, Amphibole – hornblende, Mica – muscovite and biotite, Calcite, Gypsum and Clay minerals.		
3. Petrology		03 Hrs
Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks. Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of Granite, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Quartzite, Marble, Slate, Gneiss and Schist.		
Unit II		
4. Structural Geology and Geophysical Methods		03 Hrs
Geological maps – attitude of beds, study of structures – folds, faults and joints – relevance to civil engineering.		
5. Application of Geological Investigations		06 Hrs
Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings – Failed dam projects, Standard guidelines for major dam and reservoir investigation. Coastal protection structures. Investigation of Landslides, causes and mitigation.		
6. Geological Exploration and Environmental Hazards		03 Hrs
Geological Formations; Preparation of Hazard Maps; Role of Engineering Geologist in Planning, Design and Construction Stages in Civil Engineering Works .		
Unit III		
7. Earthquake and Seismic Hazards		07 Hrs
Earthquake and volcanic activity, effects of earthquakes to civil engineering structures. Seismic source, paleo-seismology, ground motion, site effects, instrumentation in India, seismic hazards in India, Case studies.

Program: Civil Engineering		Semester: III
Course Title: Survey Practice - I		Course Code:17ECVP201
L-T-P: 0-0-1	Credits:1	Contact Hours:3 hrs/week
ISA Marks:80	ESA Marks:20	Total Marks:100
Teaching Hours:30	Examination Duration: 3hrs	
Demonstrations 1.Study of chain, tape, Ranging rod, Direct Ranging, Dumpy level, Compass and EDM (Total Station) device. 2.To locate contour by direct and indirect method.		
Experiments 1.Plot the boundary layout of a building by using direct ranging and set out the perpendiculars using chain, tape and cross staff. 2.To mark the center line for different types of civil engineering structures (using closed traverse methods) having different shapes. 3.To locate the various positions of objects (trees, electric pole, drainage) along the center line of a road. 4.To setup the temporary bench marks for a given topography using Auto level. 5.To determine difference in elevation between two points using reciprocal leveling and determine the collimation error. 6.To conduct profile leveling for water supply / sewage line / road alignment and to draw the longitudinal section to determine the depth of cut and depth of filling for a given formation level using auto level and total station.		
Open Ended Experiments: Your company has received a tender on survey work to fix up the plinth level for proposed residential building on a sloping terrain, produce a detailed report for the same.

Program: BE Civil Engineering		Semester: IV
Course Title: Numerical methods and Partial differential equations		Course Code: 15EMAB207
L-T-P: 4-0-0	Credits: 2	Contact Hours: 50
ISA Marks: 50	ESA Marks: 50	Total Marks: 100
Teaching Hours: 04	Examination Duration: 3Hrs	
Unit I		
1. Interpolation techniques		08 Hrs
Finite differences, Forward, Backward and central difference operators. Newton Gregory forward and backward interpolation formulae. Sterling's and Bessel's formulae for central difference, Newton's divided difference formula for un equal intervals. Heat transfer problem, gas law problem-shear stress problem-using interpolation.		
Python: Interpolation problems related to Mechanical engineering.		
2. Matrices and System of linear equations		07 Hrs
Introduction to system of linear equations, Rank of a matrix by elementary row transformations. Consistency of system of linear equations, solution of system by Direct methods-Gauss elimination, Gauss Jordan method. Solution of homogenous system $AX=0$, Eigenvalues and Eigenvectors of a matrix.		
Python: Matrices, system of linear equations by Gauss elimination, Gauss Jordan and eigenvalue problems		
Unit II		
3. Partial differential equations		10 Hrs
Introduction, classification of PDE, Formation of PDE, Solution of equation of the type $Pp + Qq = R$, Solution of partial differential equation by direct integration methods, method of separation of variables. Modeling: Vibration of one-dimensional string-wave equation and heat equation. Laplace equation. Solution by method of separation of variables.		
4. Finite difference method.		10 Hrs
Finite difference approximations to derivatives, finite difference solution of parabolic PDE explicit and implicit methods, hyperbolic PDE-explicit method, Elliptic PDE-initial-boundary value problems. Engineering Problems: Temperature distribution in a heated plate, vibration of a stretched string, steady-state heat flow.		
Unit III		
5. Complex analysis:		05 Hrs
Function of complex variables. Limits, continuity and differentiability. Analytic functions, C-R equations in Cartesian and polar forms, construction of Analytic functions (Cartesian and polar forms).		
6. Complex Integration:		05 Hrs
Line integral, Cauchy's theorem-- corollaries, Cauchy's integral formula. Laurent's Series, Singularities, Poles, Residue theorem – problems.

Program: Civil Engineering		Semester: IV
Course Title: Structural Analysis-I		Course Code:20ECVC201
L-T-P: 4-0-0	Credits:4	Contact Hours:4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:50	Examination Duration: 3hrs	
Unit I		
1. Structural Systems		4 hrs
Classification of determinate and indeterminate structures, Conditions of equilibrium, Degrees of freedom, Linear and Nonlinear structures, Static and Kinematics indeterminacy of structures. Law of conservation of energy, Principle of virtual work.		
2. Deflection of Beams		7 hrs
Slope and deflection of simply supported and cantilever beams by Moment area method and Conjugate beam method.		
3. Strain Energy		9 hrs
Strain energy and complementary strain energy, Strain energy due to axial load, bending, Principle of virtual work, The first theorem of Castigliano, Clarke - Maxwell's theorem of reciprocal deflection, Problems on beams frames.		
Unit II		
4. Analysis of trusses.		12 hrs
Method of Joints and Method of Sections. Deflection calculations for plane trusses by strain energy and unit load method.		
5. Arches and cables		8 hrs
Three hinged circular and parabolic arches with supports at same levels and at different levels. Determination of thrust, shear and bending moment, Analysis of cables under point loads and UDL, length of cables - Supports at same level and at different levels.		
Unit III		
6. Influence Line Diagrams		5 hrs
Influence line diagrams for simply supported, cantilever and over hanging beams, Influence line diagrams for girders supporting floor beams, Use of Influence line diagrams, Maximum S.F. and B.M. values due to moving loads		
7. Two hinged arches:		5 hrs
Parabolic and circular arches		
Text Books

Program: Civil Engineering		Semester: IV
Course Title: Environmental Engineering		Course Code:15ECVC204
L-T-P: 4-0-0	Credits: 4	Contact Hours: 4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 50	Examination Duration: 3hrs	
Unit I		
1. Introduction		2 hrs
Impact of human activities on environment, Water pollution causes, need for protected water supply.		
2. Demand and conveyance of water		4 hrs
Types of water demands, population forecasting- arithmetical, geometrical, incremental increase and simple graphical method. Surface and subsurface sources. Design of the economical diameter of the rising main.		
3. Quality of Water		4 hrs
Concept of safe wholesome and palatability of water, Sampling of water, Examination of Water–Physical, chemical and Biological Examinations. Drinking water standards BIS & WHO guidelines. Health significance of Fluoride, Nitrates and heavy metals like Mercury, Cadmium, Arsenic etc.		
4. Water Treatment		10 hrs
Treatment flow-charts. Aeration- Principles, types of Aerators. Sedimentation aided Coagulant, design, jar test, Theory of filtration, slow sand, rapid sand and pressure filters, design – excluding under drainage system .Theory of disinfection, types of disinfection.		
Unit II		
5. Miscellaneous Treatment and Distribution of Water		4 hrs
Softening methods of removal of hardness by lime soda process and zeolite process. Adsorption technique, reverse osmosis technique, fluoridation and defluoridation. System of supply, service reservoirs and their capacity determination, methods of layout of distribution systems.		
6. Sewerage systems		7 hrs
Types of sewerage systems. DWF, estimation of storm flow, design of storm water drain. Design of sewers - self cleansing and non-scouring velocities. Design of hydraulic elements for circular sewers flowing full and flowing partially full		
7 Sewage characteristics		4 hrs
Physical, Chemical and Biological characteristics, CNS cycle. BOD and COD their significance		
8 Disposal of Sewage		5 hrs
Self-purification phenomenon, Zones of purification, Oxygen sag curve. Sewage sickness Sewage farming. Numerical Problems on Disposal of Effluents using Streeter Phelps equation		

Unit III**9.Sewage treatment and Sludge Disposal****10 hrs**

Flow diagram of municipal waste water treatment plant. Preliminary & Primary treatment: Screening, grit chambers, primary sedimentation tanks – Design.

Theory and design of biological unit operation- Trickling filter and Activated sludge process
Sludge digestion process, Sludge drying beds.

Program: Civil Engineering		Semester: IV
Course Title: Concrete Technology		Course Code:15ECVC205
L-T-P: 3-0-0	Credits:3	Contact Hours:3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1. Concrete Ingredients		8 hrs
Cement, Chemical composition, hydration of cement, Types of cement, manufacture of OPC by wet and dry process. Tests on cement, Grades of cement, quality of mixing water. Tests on fine and coarse aggregate.		
2. Fresh concrete		8 hrs
Workability - factors affecting workability, Measurement of workability, Slump cone test, Compaction factor and vee-bee consistometer test, Segregation and bleeding. Process of manufacture of concrete, Curing of concrete. Chemical admixtures-Super plasticizers, Accelerators, Retarders, Air entraining agents. Mineral admixtures - Fly ash, GGBS, Silica fume, Rice husk ash.		
Unit II		
3. Hardened concrete		10 hrs
Factors affecting strength, w/c ratio, gel/space ratio, maturity concept. Effect of aggregate properties, relation between and compressive strength, and tensile strength, bond strength, modulus of rupture. Accelerated curing. Modulus of Elasticity of concrete, Creep, Shrinkage, Factors affecting creep and shrinkage, Extensibility of concrete, Durability - definition, significance, permeability, sulphate attack. Chloride attack, carbonation, freezing and thawing. Factors contributing to cracks in concrete settlement cracks,		
4. Concrete Mix design		06 hrs
Concept of Mix design, variables in proportioning exposure conditions, Methods of Concrete Mix design, Procedure of mix design as per IS 10262-2019, Numerical examples of Mix design with river sand and M-sand, Mix Design and testing of SCC, Pavement quality concrete mix design as per IRC guidelines.		
Unit III		
5. Special concretes and concreting methods		5 hrs
Constituents, properties and applications of Light weight concrete, High density concrete, High strength and high-performance concrete, Self-Compacting Concrete, EFNARC standards, Fiber reinforced concrete and Ready mixed concrete. Ferro cement - Constituents, properties and applications. Guniting and shotcreting. Pavement Quality concrete, Green concrete for sustainable environment - Geopolymer concrete and concrete wall panel,		
6. Non-Destructive testing of concrete		3 hrs
Principles, applications and limitation of Rebound hammer test and Ultrasonic pulse velocity test, interpretation of test values, Rebar test.		
Text Books		
1.Bhavikatti S. S., Concrete technology, I.K. International Publishing House, 2015.		
2.Neville A. M. and Brooks J. J., Concrete technology, 2ed, Prentice Hall Publisher, 2010.		
3.Shetty M.S., Concrete technology - Theory and practice, 1ed., S.Chand and company, New Delhi, 2008.		

Reference Books:

1. Kumar Mehta P., Paulo J. M. Monteiro - Concrete: Microstructure, Properties, and Material, McGraw Hill publications, 2013.
2. Gambhir M. L., "Concrete Technology", 3ed., Tata McGraw hill Publishers Pvt. Ltd, New Delhi, 2008.

IS Codes:

1. IS-10262-2019, Recommend guidelines for concrete mix.
2. IS-383:2016, Specifications for Concrete mix aggregates from natural resources for concrete (Third revision).
3. IS-456:2000, Code of practice of plain and reinforced concrete, 4ed., August 2000.
4. IS-516: Method of Tests for Strength of Concrete, 2013.
5. IS-13311-2 (1992): Method of non-destructive testing of concrete-methods of test, Part 2: Rebound hammer

Program: Civil Engineering		Semester: IV
Course Title: Construction Project Management		Course Code:20ECVC206
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction to Construction Project Management		5 hrs
Evolution of Indian Construction sector, Phases of a construction project, classification of construction works, Necessity of CM, Objectives of civil engineering CM, Functions of management, Importance of construction and construction industry, Employment generation in the construction sector, Participants/stakeholders of a construction project, Scientific methods of construction management.		
2. Drawings and Specifications		5 hrs
Types of Drawings-Architectural and Structural, Study of Scales Used, sequence of dimensioning, dimension lines and figures, Importance of Specifications, General specifications detailed specifications of a typical building. Scope definition using drawings and specifications.		
3. Work Breakdown Structure		5 hrs
Concept of WBS, Common usage of terms, preparing a WBS, Factors to be considered, WBS measurement considerations, Challenges to be considered, WBS level of Detail, WBS life-cycle considerations, Problems – Detailed WBS of a residential building.		
Unit II		
4. Project Management through Networks		11 hrs
Introduction, project feasibility, planning methods of projects– Objectives, planning stages. Scheduling, Bar charts and mile stone charts. Introduction, Terms & definitions, Elements of network, types of networks, drawing the network. CPM – Event times, Activity times, floats, critical activity and critical path. Problems. PERT – Introduction, time estimates, expected time, earliest expected time, latest allowable occurrence time, slack, critical path. Probability of completing the project. Problems.		
5. Resource Allocation		04 hrs
Introduction, Objectives of resource allocation, Methods of resource allocation, Resource smoothing, Steps in resource smoothing, Resource levelling, Steps in resource levelling.		
Unit III		
6. Safety Construction Engineering		05 hrs
Introduction to concept of HSE as applicable to the construction, importance of safety in construction, safety measure to be taken during excavation, hot bituminous work, explosive, drilling & blasting, scaffolds/platforms work & equipment operations. Safety through legislation, safety campaign & insurance.		
7. Technology Trends and Sustainability in Construction.		05 hrs
Introduction to current trends in IT for construction sector, Construction process and IT application and its development. Sustainability in construction, Importance and benefits, Introduction to green buildings, tools and technologies used in green construction, sustainability rankings – LEED.		

**Text Books**

1. Kumar Neeraj Jha, Construction Project Management: Theory and Practice, 2ed., Edition, Pearson Publications, 2015.
2. B. L. Gupta, Construction management & machinery, 4ed, Standard Publishers, 2008

Program: Civil Engineering		Semester: IV
Course Title: Hydrology & Irrigation Engineering		Course Code:15ECVC207
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction to Hydrology		06 hrs
Introduction, Hydrologic cycle, Water budget equation, Precipitation: Forms and type of precipitation, Measurement of precipitation, Selection of rain gauge station. Adequacy of rain gauges, Methods of computing average rainfall, Interpolation of missing rainfall data, Consistency of rainfall data by double mass curve method. Hyetograph and Mass curve of rainfall. Difference between ground water and surface water.		
2. Losses from Precipitation		05 hrs
Evaporation: Factors affecting, Measurement by Class A pan, Estimation using empirical methods. Evapo-transpiration: Factors affecting and Measurement, Estimation using Blaney criddle method and Penman–Monteith equation. Infiltration: Factors affecting and measurement by double ring infiltrometer, Infiltration indices, Horton's equation of infiltration, Runoff and its estimation.		
3. Hydrographs		05 hrs
Definition, Components of Hydrograph, Base flow separation, Groundwater, Darcy's Law, Types of Aquifer, Unit hydrograph and its derivation, S – curve and its computation.		
Unit II		
4. Introduction to Irrigation		04 hrs
Definition, Benefits and ill effects of irrigation, Sources of water for irrigation, Systems of irrigation: Surface, Flow irrigation, Lift irrigation, Bandhara irrigation, Micro irrigation, Sprinkler irrigation. Methods of applying water to crops in India.		
5. Water Requirements of Crops		04 hrs
Definition of Duty, Delta and Base period, Relationship between Duty, Delta and Base period, Factors affecting duty of water, Soil-water-plant relationship. Crops and crop seasons in India, Irrigation efficiency, Frequency of irrigation, Definition of gross command area, Culturable command area, Culturable cultivated area.		
6. Canals		04 hrs
Definition, Types of canals, Alignment of canals and canal regulators. Design of canals by Kennedy's and Lacey's methods. Cross drainage works: Classifications, Diversion Works: definition, layout. Types of weirs and Barrages.		
7. Gravity Dams		04 hrs
Definition, Forces acting on a Gravity dam, Stability Analysis of Gravity Dam, Elementary and practical profile, Low and high gravity dams, Drainage Galleries.		
Unit III		

8. Earthen Dams
04 hrs

Introduction, Types of earthen dams, Failure of earthen dams, Drainage arrangements. Phreatic line, determination of phreatic line.

9. Spillways
04 hrs

Definition, Types of Spillways, Design Principles for an Ogee Spillway. Energy dissipaters, Types of basins.

Program: Civil Engineering		Semester: IV
Course Title: Survey Practice - II		Course Code:15ECVP204
L-T-P: 0-0-1	Credits: 1	Contact Hours: 3 hrs/week
ISA Marks: 80	ESA Marks: 20	Total Marks:100
Teaching Hours: 30	Examination Duration: 3hrs	
Demonstrations 1.Measurement of horizontal angles with method of repetition and reiteration using theodolite and Total Station, Measurement of vertical angles using theodolite and Total Station. 2.Introduction of GPS. 3.Introduction to GIS, digitization of maps, geo-referencing of topo maps and generating contours.		
Experiments 1.To determine the elevation of an object using single plane and double plane method when base is accessible and inaccessible using theodolite and Total station. 2.To set out simple curves using linear methods perpendicular offsets from long chord. 3.To set out simple curves using linear methods by offsets from chords produced. 4.To set out simple curves using Rankine's deflection angles method. 5.To set out compound curve with angular methods. 6.To set out reverse curve between two parallel line with angular methods.		
Structured Enquiry •To set out the center line of columns for different buildings using Total Station.		
Open Ended Experiment •A developer wants to get a landscaping done for a particular area; you as a surveyor are required to develop the layout map of the same area. •Fix an alignment between two points and produce a detailed report on earthwork.

Program: Civil Engineering		Semester: V
Course Title: Structural Analysis-II		Course Code:21ECVC301
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Slope Deflection Method		08 hrs
Introduction, Assumptions, Sign conventions, Derivation of slope deflection equation, Analysis of continuous beams, Analysis of portal frames with and without lateral sway.		
2. Moment Distribution Method		08 hrs
Stiffness and carry over factors, Distribution and carryover of moments , Analysis of continuous Beams, Plane rigid frames with and without sway Support settlement, symmetric frames with symmetric and skew-symmetric loadings		
Unit II		
3. Stiffness Matrix Method		08 hrs
Degree of kinematic indeterminacy of one and two dimensional structures, generalised coordinates, Analysis of continuous beams with and without sinking of supports and portal frames kinematic redundancy < 3.		
4. Flexibility Matrix Method		08 hrs
Development of element flexibility matrices, Development of global flexibility matrix, Analysis of continuous beams, and rigid plane frames to determine for internal forces and displacements.		
Unit III		
5. Plastic Analysis		08 hrs
Introduction, plastic hinge and plastic moment capacity, Assumptions, Shape factor for general sections, Collapse load, Basic theorems for finding collapse loads, Methods of plastic analysis, Beam mechanism for continuous beam.		
Text Books		
1.Bhavikatti S.S, Structural Analysis II, 4ed., Vikas Publishing House India Pvt. Ltd, Bangalore, 2016.

Program: Civil Engineering		Semester: V
Course Title: Geotechnical Engineering		Course Code: 15ECVC302
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction to Geology		03 hrs
Geology in civil engineering, branches of geology, structure of earth and its composition, weathering of rocks, scale of weathering of soils. classification of rocks, engineering properties of rocks-description, occurrence, distribution and their uses.		
2. Introduction to Geotechnical Properties of Soils		06 hrs
Introduction to soil mechanics, phase diagram, basic properties of soils and their inter relationships, index properties of soil -relative density and grain size analysis, Atterberg limits, activity of clay.		
3. Classification of Soils and Clay Mineralogy		04 hrs
Purpose of soil classification, basis for soil classification, unified soil classification, IS classification, Field identification of soils. Types of structure of soil, Valence bonds Soil -Water system, Electrical diffuse double layer, adsorbed water, base-exchange capacity, Isomorphous substitution. Common clay minerals in soil and their structures- Kaolinite, Illite and Montmorillonite.		
4. Compaction of Soils		03 hrs
Principle of compaction, Standard and Modified proctor's compaction tests, factors affecting compaction, effect of compaction on soil properties, Field compaction control.		
Unit II		
5. Flow of Water through Soils		05 hrs
Darcy's law- assumption and validity, coefficient of permeability, factors affecting permeability, permeability of stratified soils, Laplace equation- assumptions and limitations only, Characteristics and uses of flow nets, construct flow nets for sheet pile. effective stress concept, total stress and effective stress, quick sand phenomena.		
6. Shear Strength of Soils		07 hrs
Concept of shear strength, Mohr's strength theory, Mohr-coulomb theory, conventional and modified failure envelopes, total and effective shear strength parameters, sensitivity and thixotropy of clay. shear parameters- direct shear test, unconfined compression test, triaxial compression test under different drainage conditions and vane shear test.		
7. Sustainability in Geotechnical Engineering		03 hrs
Ground improvement techniques using locally available materials for road works, embankments and backfilling, criteria for selection sustainable material, role of sustainable practices in sanitary landfill as liners.		
Unit III		
8. Consolidation of Soils		05 hrs

Definition, Mass-spring analogy, Terzaghi's one dimensional consolidation theory-assumption and limitations. Normally consolidated, under consolidated and over consolidated soils, pre-consolidation pressure and its determination by Casagrande's method. Consolidation characteristics of soil (C_c , a_v , m_v and C_v), Time rate of consolidation. Determination of consolidation characteristics of soils-compression index, and coefficient of consolidation, determination of coefficient of consolidation by square root of time fitting method, logarithmic time fitting method.

9. Stresses in Soils**04 hrs**

Boussinesq's and Westergaard's theories for concentrated, circular, rectangular, line and strip loads. Comparison of Boussinesq's and Westergaard's analysis. Pressure distribution diagrams, contact pressure, Newmark's chart.

Program: Civil Engineering		Semester: V
Course Title: Design of RCC Structures		Course Code:15ECVC303
L-T-P: 4-0-0	Credits:4	Contact Hours:4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:50	Examination Duration: 4 hrs	
Unit I		
1. General Features of Reinforced Concrete		05 hrs
Introduction, Design Philosophy: Working stress method, Ultimate load method, Principles of working stress and Limit State Design methods Limit State Method of Design: Design Loads, Materials for Reinforced Concrete, Codal provisions, Concept of Safety Principles of limit states, Factor of Safety, Characteristic design loads, and Characteristic design strength.		
2. Limit State of Collapse		11 hrs
General aspects of Ultimate strength, Stress block parameters for limit state of collapse, Ultimate flexural strength of singly reinforced and doubly reinforced rectangular sections, Ultimate flexural strength of flanged sections, Ultimate shear strength of RC sections, Concept of development length and anchorage.		
3. Limit State of Serviceability		04 hrs
General Specifications for design of beams for flexure -Codal provision for sizing of beam, cover to reinforcement-spacing of bars. General aspects of serviceability- Deflection limits in IS: 456 – 2000, Long term and short term deflections, crack width calculation.		
Unit II		
4. Design of Flexural members.		08 hrs
General consideration of design of beams, Design examples for Simply supported and Cantilever beams for rectangular, flanged sections, Anchorages of bars, check for development length and deflection, Slenderness limits for beams to ensure lateral stability, Drawing reinforcement details.		
5. Design of Slabs		05 hrs
General consideration of design of slabs, Slabs spanning one direction, and two directions for various boundary conditions, Design of simply supported, cantilever slabs. Design procedures for critical sections for moment and shear and check for deflection, Reinforcement details.		
5. Design of Columns		07 hrs
General aspects, effective length of column, loads on columns, slenderness ratio of columns, minimum eccentricity, design of short axially loaded columns, design of column subject to combined axial load, uniaxial and biaxial moment using SP –16 charts, Reinforcement details		
Unit III		
6. Design of Isolated footing		06 hrs
Design of isolated Footing subjected to axial load and uniaxial moment. Design of square footing, rectangular footing, rectangular footing with eccentric loads, Drawing reinforcement details.		

7. Design of Staircase
04 hrs

General features, types of staircases, loads on stairs, effective span as per IS code provisions, distribution of loading on different types of stairs, Design of doglegged staircase, Concept of folded staircases, Reinforcement details

Text Books

Program: Civil Engineering		Semester: V
Course Title: Transportation Engineering		Course Code:15ECVC304
L-T-P: 4-0-0	Credits: 4	Contact Hours: 4 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 50	Examination Duration: 3hrs	
Unit I		
1. Highway Network Planning		03 hrs
Different modes of transportation, Jayakar committee recommendations and implementation, Road patterns, planning surveys and Phasing of road development in India, Salient features of 3rd and 4th 20year road development plans, Highway development authorities – NHAI, MoRTH, KSHIP, KRDCL, Present scenario of road development nationally and at state level – Bharatmala Project, NGHM, NHDP, PMGSY, Vision 2021.		
2. Highway Alignment		03 hrs
Environmental stewardship in selection of best natural landscape, the terrain or topographical features for road alignment, factors affecting in selection of highway alignment, Engineering surveys, Steps involved in Preparation of Detailed Project Report (DPR) for new highway alignment and realignment of highway.		
3. Geometric Design of Highways		12 hrs
Functional design of highways, Cross Section Elements of highways, Sight Distance, Design of Horizontal and Vertical Curves, Geometric design aspects of expressways.		
Unit II		
4. Traffic Engineering		14 hrs
Components of road traffic- vehicle, driver and road, Road user, vehicle and traffic characteristics, Methods of traffic study-equipment used, data collection, analysis and interpretation of speed studies, traffic volume count, origin – destination studies, parking studies, accident studies and features involved in road safety audit system, Traffic flow and roadway capacity – traffic flow characteristics, traffic stream flow characteristics, speed-flow-density relations, concept of PCU, capacity and level of service, Traffic regulations and control - regulations and control on drivers, vehicles and traffic flow, traffic signs, traffic signals, types and design methods, Introduction to public transit system.		
5. Pavement Materials and Design		08 hrs
Desirable properties of subgrade soil, road aggregates and bituminous materials relevant to pavement applications. Requirements of pavement quality concrete (PQC), Bituminous mixes-preparation, design and testing. Sustainable management of natural resources in road construction – Emerging sustainable pavement materials and technologies.		
Unit III		
7.Pavement Design and Construction		10 hrs
Embankment / Subgrade, Granular sub base course, Granular base course, Prime Coat, Cementaceous Sub base/Base course, Bituminous base course, Tack Coat, Bituminous surface course, Dry Lean Concrete base course, Pavement Quality Concrete surface course, Compaction and Stabilization techniques in pavement construction, Construction of different types of joints in rigid pavement, Highway drainage system, Integration of science, technology and innovation		

into highway construction in order to develop a sustainable road project.
 Pavement components and their functions -Factors influencing the design of pavements -
 Design principles -Design of flexible and rigid pavements as per IRC.

Program: Civil Engineering		Semester: V
Course Title: Construction Economics & Management		Course Code:19ECVC305
L-T-P: 3-0-0	Credits:3	Contact Hours:3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
Unit I		
1. Construction Economics		10 hrs
Introduction, economic decision making, Time Value of Money, Cash Flow Diagrams, Using Interest Tables, Evaluating Alternatives by Equivalence, Effect of Taxation on Comparison of Alternatives, Effect of Inflation on Cash Flow, Evaluation of Public Projects: Discussion on Benefit-cost Ratio		
2. Economic Sustainability in Construction Economics and Management		04 hrs
Definition of economic sustainability within the construction industry, Key Principles of Economic Sustainability, Life cycle costing: Techniques for assessing total costs over a project's lifetime, Economic Models and Tools and social benefits of adopting sustainable practices. Risk management: Identifying, analyzing, and managing risks associated with economic		
Unit II		
3. Project Control		08 hrs
Determination of unit costs and total cost of a typical construction project. Project Controls - Introduction, Project life cycle, Overview of project life cycle, earned value management, cost performance Index, Schedule performance index, forecasting methods and problems, resource utilization and cumulative curves, Cost loaded Schedules.		
4. Construction Material Management		04 hrs
Introduction, Material procurement process in construction organization, material management functions, inventory management, Sustainable procurement: Selecting suppliers and materials that adhere to sustainability standards		
5. Construction Equipment Management		04 hrs
Introduction, Plant and Equipment Acquisition, Depreciation, Methods of Calculating Depreciation, Example of Depreciation Calculations for Equipment on Site, The Effect of Depreciation and Tax on Selection of Alternatives, Evaluating Replacement Alternatives.		
Unit III		
6. Project Organization		06 hrs
Introduction, Forms of business organizations, Structure of construction organization, organizing for project management, management levels, traits of a project manager and project coordinator, Factors behind the success of a construction organization.		
7. Logistics and Supply Chain Management		04 hrs
Dimensions of Logistics – Introduction, Macro and Micro Dimension, Macro Dimension, Micro Dimensions, Logistics Activities, Factors Affecting the Cost and Importance of Logistics Introduction to Supply Chain, Supply Chain Management, Objective of Supply Chain Management, Importance of Supply Chain Management, Activities of Supply Chain Management, Barriers of Supply Chain Management.		

Text Books

- 1.Kumar Neeraj Jha, Construction Project Management – Theory and Practice, 2ed., Pearson Publication, 2015.

Program: Civil Engineering		Semester: V
Course Title: Highway Engineering Laboratory		Course Code:15ECVP301
L-T-P: 0-0-1	Credits: 1	Contact Hours: 2 hrs/week
ISA Marks: 80	ESA Marks: 20	Total Marks:100
Teaching Hours: 30	Examination Duration: 3hrs	

Demonstration Experiment

1.Demonstration of fifth wheel bump integrator, Benkelman beam deflectometer (BBD).

Tests to characterize given aggregates as Highway Construction material

- 1.Impact Test.
- 2.Crushing Test.
- 3.Los Angeles Abrasion Test.
- 4.Specific Gravity and Water Absorption Test.
- 5.Aggregate Shape Tests
 - i.Flakiness Index on aggregate
 - ii.Elongation Index on aggregate
 - iii.Angularity Number of aggregate
- 6.Developing Job mix formula (JMF) as per Rothfutch's method and by using Simple Tool for Aggregate Blending (STAB version 2.0)

Tests to characterize given bitumen sample as Highway Construction material

- 1.Penetration Test.
- 2.Ductility Test.
- 3.Softening Point Test.
- 4.Flash and Fire Point Test.
- 5.Specific Gravity Test.
- 6.Viscosity Test.

Structured Enquiry Test

- 1.Confirmation of Moorum as a road subgrade material by measuring its required strength through CBR test.
- 2.Marshall Mix Design and mix property analysis for bituminous concrete adopting mid gradation method.

Open Ended Experiments

- 1.Considering current engineering practices, establish procedures for design of different kinds of asphalt mixtures and investigate the performance.

Program: Civil Engineering		Semester: VI
Course Title: Design of Steel Structures		Course Code:23ECVC301
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction		03 hrs
Advantages and disadvantages of Steel structures, Loads and load combinations. Different sectional forms, Design concepts (Working Stress Method and Limit State Method). IS code provisions. Steel manufacturing processes, environmental impact, embodied energy, and emissions of CO ₂ and construction techniques.		
2. Structural Connections		07 hrs
Introduction to Bolted connections, Strength of bolt and bolted joint. Design of bolted connections. Introduction to welded connections, strength of a weld, Design of welded connections, Bracket connections for bolt and weld connections.		
3. Design of Tension Members		06 hrs
Axially loaded tension members and their connections, introduction to lug angles, Design of truss ties and joints.		
Unit II		
4.Design of Compression Members		08 hrs
Angle struts, Columns including built up sections, Laced and Battened systems. Column splicing, column bases- simple slab base, gusseted base. Design of Anchor bolts.		
5. Design of Flexural Members		09 hrs
Rolled and built up sections. Laterally supported and unsupported compression flange. Web crippling and web buckling, web stiffeners and beam splicing. Design of purlins.		
Unit III		
6. Design of Welded Plate Girders		07 hrs
Introduction to girders, Design of Plate Girders (without intermediate stiffeners), Introduction to gantry girder.		
Text Books		
1.Bhavikatti, S.S, Design of Steel Structures, 5ed., New Age International , 2017		
2.Duggal S.K , Design of Steel Structures, 2ed., Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2014.		
3.Subramanian, N., Design of Steel Structures, 1ed., Oxford University Press, New Delhi, 2014.		
Reference Books:		
1.Subramanian, N., Design of Steel Structures, 1ed., Oxford University Press, New Delhi, 2014.		

Program: Civil Engineering		Semester: VI
Course Title: Estimation and Costing		Course Code:15ECVC307
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction		05 hrs
Different type of estimates, study of various drawing attached with estimates, important terms, units of measurement, Schedule of rates: Substituted items; Recasting of estimate; External services; Prime cost; Day work; Provisional sum; Taking off in Quantity Surveying; Bill of quantities abstract, approximate methods of estimating buildings, cost from materials and labour equations recommended by CBRI –examples.		
2. Methods of Estimation		03 hrs
Methods of taking out quantities and cost -center line method, long and short wall method or crossing method.		
3. Preparation of Estimates for Building Components		08 hrs
Preparation of detailed and abstract estimates for the following Civil Engineering works - Buildings -Masonry structures and framed structures with flat, sloped RCC roofs. Building components (Beams, Columns and Column Footings, RCC Roof Slabs etc) Bar Bending Schedule for RCC works.		
Unit II		
3. Preparation of Estimates for Truss & Culverts		04 hrs
Steel truss, RCC slab culverts, Manhole and Septic tanks,		
4. Specifications		04 hrs
Definition of specifications, objective of specifications, standard specifications, essentials of specifications, general and detail specifications of earthwork, burnt brick masonry, cement mortar, plain cement concrete and reinforced cement concrete, specifications of aluminum and wooden partitions, false ceiling, aluminum and fiber doors and windows, various types of claddings.		
5. Rate Analysis		07 hrs
Definition and purpose, Types of rate analysis, Working out quantities and rates for the following standard items of works -earth work in different types of soils, cement concrete of different mixes, bricks and stone masonry, flooring, plastering, RCC works, centering and form work for different RCC items, wood and steel work for doors, windows and ventilators.		
Unit III		
6. Estimation of Roads		05 hrs
Methods for computation of earthwork -cross sections -mid section formula, trapezoidal or average end area or mean sectional area formula, prismoidal formula, for different terrains. Estimation of bituminous road and cement concrete roads.		

7. Department (PWD) Procedures / Processes
04 hrs

Types of contract -essentials of contract agreement - legal aspects, penal provisions on breach of contract. Definition of the terms -Tender, E-governance, Standard Bid Document (SBD), E-procurement, KTCP Act, earnest money deposit, security deposit, tender forms, documents and types. Comparative statements, acceptance of contract documents and issue of work orders. Duties and liabilities, termination of contract, completion certificate, quality control, right of contractor, refund of deposit. Administrative approval -Technical sanction. Nominal muster roll, measurement books -procedure for recording and checking measurements - preparation of bills, Arbitration.

Course Title: Minor Project		Course Code:15ECVW302
L-T-P: 0-0-6	Credits:6	Contact Hours: 3 hrs/week
ISA Marks:50	ESA Marks:50	Total Marks:100
Teaching Hours:40	Examination Duration: 3hrs	
<p>Functional and architectural design of a building from, but not restricted to one of the following category: Educational institutions, Administration buildings, Industrial buildings, Commercial buildings, Public facilities such as bus terminus, rail station, hospitals, cinema halls, auditorium etc.</p> <p>The students shall identify a building for case study and collect data of the building and compare it with HDMC By-laws, NBC-2016 codes and IS codes. Further, students will carry out functional design for their proposed building through bubble diagrams and circulation diagrams and consider aspects such as orientation, aspect, best use of site conditions. The project shall include calculation of loads and analysis and design of components including foundations, columns, beams and slab. Simplified computer aided analysis should be performed.</p> <p>The student shall submit the following:</p> <ul style="list-style-type: none"> • Identification of Project. • Bubble diagrams and Circulation diagrams • Logic used to arrive at room dimensions based on ergonomics, furniture sizes and placement, equipment etc. • Architectural plans, elevations, sections and building services fit for submission to approving authorities • Preliminary soil investigation. • Results of structural analysis and design of selected components • Drawings showing structural details of components designed • Develop WBS, calculate productivity, create precedence diagram, develop cost-loaded schedule and create a baseline. • Collection of progress data, update the schedule, perform earned value analysis. <p>Expected Deliverables:</p> <p>Identify project details, bubble diagrams and circulation diagrams, complete architectural plans, Soil investigation report, Final structural design drawings and calculations, detailed WBS, productivity calculations, precedence diagram, Initial cost-loaded schedule (Primary Baseline), 1st progress report and earned value report.</p>

Program: Civil Engineering		Semester: VII
Course Title: Pre-Stressed Concrete		Course Code:24ECVC401
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction		03 hrs
Definition, Pre tensioning and Post tensioning, Materials for prestressing, Need of High strength concrete and steel, Stress-strain characteristics and properties. Methods of prestressing		
2. Analysis of Sections for Flexure		07 hrs
Basic principles of prestressing: fundamentals, load balancing concept, stress concept and strength concept. Stresses in concrete due to pre-stress and loads, stresses in steel due to loads, Cable profiles, Pressure line and thrust line.		
3 Losses of Prestress		05 hrs
Various losses encountered in pre- tensioning and post tensioning methods, determination of jacking force.		
Unit II		
4. Design of Beams		10 hrs
Design of pre-tensioned and post-tensioned symmetrical and asymmetrical sections. Permissible stress, design of prestressing force and eccentricity, limiting zone of pre-stressing force cable profile. Analysis of PSC members for shear as per IS 1343-2012.		
5. Analysis of Continuous Beam		05 hrs
Secondary moments in continuous beams, Concordant cable profile for straight and parabolic cable profile.		
Unit III		
6. Deflection of Beams		05 hrs
Prediction of short term and long term deflections of un-cracked members.		
7. Design of End Blocks		05 hrs
Transmission of pre stress in pre tensioned members, transmission length, Anchorage stress in post- tensioned members. Bearing stress and bearing tensile force-stresses in end blocks- Methods, I.S. Code, provision for the design of end block reinforcement

Program: Civil Engineering		Semester: VII
Course Title: Construction Management Workshop		Course Code:24ECVP401
L-T-P: 0-0-1	Credits: 1	Contact Hours: 2 hrs/week
ISA Marks: 80	ESA Marks: 20	Total Marks:100
Teaching Hours: 30	Examination Duration: 3hrs	

Preamble:

Through the courses in the preceding semesters (3rd, 4th and 5th), the students are studying the basics of many courses in the fields of construction engineering and management, structural engineering, geotechnical engineering, environmental engineering and transportation engineering. This course aims to bridge the gaps between theoretical concepts learned in classroom and their practical applications in the industry.

Course will be delivered through a series of site visits and guest lectures from industry experts.

Deliverables:

Student group will be given a hypothetical site where in their job profile will be of a project manager. Guest lectures from project managers and site engineers will provide the necessary tools and work cultures on the site, which the students have to apply to their project.

The students will learn the following concepts as practiced in the field:

- 1.Roles and responsibilities of various stakeholders involved like the owner, architect, structural consultant and the general contractor.
- 2.The material procurement process – quality and cost negotiation process. Costs involved in using RMC or procurement of raw materials to produce concrete on site etc.
- 3.Labour cost negotiations, roles and responsibilities, basic amenities to be provided and person-hour tracking.
- 4.Safety protocol followed in the jobsite.
- 5.Process of material delivery on the job site and coordination with the accounts department.
- 6.Technical problems encountered during execution – For example, deep well located during excavation – design changes to be made, concrete strength failure after 28 days – what measures to be taken, errors during surveying of the building, honeycombing or bulging of concrete etc.
- 7.Tracking of the progress – both time and cost. Creating of monthly progress reports.
- 8.Equipment management – renting vs owning, maintenance.
- 9.Roles and responsibilities on the project manager, site engineers, supervisors, safety officers.
- 10.Store management.
- 11.On site testing and third-party testing – advantages and disadvantages.
- 12.Site layout for optimum utilization of construction space.
- 13.Reconciliation of materials like formwork, steel etc.

The student team will submit a comprehensive report about the management of a construction site and the difficulties and solutions employed to their sites and present their case.

Program: Civil Engineering		Semester: VI
Course Title: Traffic Engineering		Course Code:15ECVE302
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Traffic Stream Characteristics		4 hrs
Introduction to traffic engineering: Road user characteristics, human and vehicle characteristics; Fundamental parameters and relations of traffic flow: speed, density, volume, travel time, headway, spacing, time-space diagram, time mean speed, space mean speed and their relation, relation between speeds, flow, density, fundamental diagrams		
2. Microscopic Traffic Characteristics		7 hrs
Time headway and Time headway distribution and classification. Random, Constant, Intermediate Headway state. Vehicular speed trajectories, speed characteristics under uninterrupted flow conditions, distance headway characteristics, Vehicle Arrivals, Car-following theories and applications. Traffic stability.		
3. Macroscopic Traffic Characteristics		4 hrs
Temporal, spatial and modal flow patterns, uninterrupted and interrupted traffic flow applications. Speed and travel time variations, travel time and delay study techniques. Density measurement techniques, estimation of total travel time and traffic demand.		
Unit II		
4. Capacity Analysis		6 hrs
Capacity and Level of service LOS: Definitions, highway capacity, factors affecting LOS, HCM (Indo-HCM) methods; Urban Street: Classification, operational performance measures, congestion management; Multilane highways: Characteristics, capacity and level of service; Freeway operations: Operational considerations, capacity and level of service of a basic freeway segment, weaving operation; Ramp metering: Merging and diverging areas; gap acceptance, speed at ramps; fixed, reactive, and predictive systems; Corridor analysis: Segment capacity, free flow travel time, queue delay, transit corridor.		
5.Traffic Systems Management		4 hrs
Traffic Management- Traffic System Management (TSM) and Travel Demand Management (TDM), Traffic Forecasting techniques, Restrictions on turning movements, One-way Streets, Traffic Segregation, Tidal flow operations, Bus priority techniques. Evaluation of traffic management plan.		
6. Traffic Stream Models		5 hrs
Greenshields's model, Greenberg's logarithmic model, Underwood's exponential model, pipe's generalized model, multi-regime models; Moving observer method. Problems		
Unit III		
7. Shock wave and Queueing Analysis		4 hrs
Introduction to shock waves, Shock wave equation, shockwaves at signalized intersections, along a highway, along a pedestrian-way. Deterministic queueing and stochastic analysis.		

8. Traffic simulation models - Calibration and validation

6

hrs

Fundamentals of Traffic Simulation; Concepts of microscopic models. A basic methodological approach for calibrating and validating a microscopic traffic simulation model. Calibration and validation guidelines. Calibration, validation and data availability. Goodness-of-fit measures. Time series analysis comparisons for the validation. Traffic Simulator: MITSIM, VISSIM; Traffic simulation models for mixed traffic conditions.

Program: Civil Engineering		Semester: VI
Course Title: Pavement Engineering		Course Code:15ECVE303
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Introduction to pavement system		04 hrs
Desirable characteristics of pavement, types and components, Difference between Highway pavement and Air field pavement, Functions of sub-grade, sub base – Base course – surface course, comparison between Rigid and flexible pavement.		
2. Stresses and Deflections in Flexible Pavements		06 hrs
Factors affecting design and performance of flexible and rigid pavements – Pavement design factors, loads – axle load distribution, ESWL, EWL, VDF due to varying loads and CSA. Application of elastic theory, stresses, deflections / strains in single, two- and three-layer system, Applications in pavement design		
3. Flexible Pavement Design		08 hrs
Flexible pavement design approaches: Empirical, semi- empirical and theoretical design approaches, principle, advantages and application. Design of flexible pavement for low volume and rural roads as per IRC guidelines, outline of other common design methods.		
Unit II		
4. Stresses in Rigid Pavement		06 hrs
General design principle, Stresses in rigid pavements, stresses due to wheel loads and temperature variations.		
5. Rigid Pavement Design		08 hrs
Design of cement concrete pavements, white topping as per IRC guidelines. Design features of CRCP, SFRC and ICBP.		
Unit III		
5. Pavement Failures, Maintenance and Evaluation		08 hrs
Types of failures, causes, remedial/maintenance measures in flexible pavements – Functional Evaluation by visual inspection and unevenness measurement by using different techniques - Structural Evaluation by Benkelman Beam Deflection Method, Falling weight deflectometer (FWD).

Program: Civil Engineering		Semester: VI
Course Title: Applied Hydrology and Hydraulic Structures		Course Code:20ECVE301
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Hydrology and Its Statistics		09 hrs
Flow duration curves, Stage Discharge Curves, Hydrologic Routing, Risk, reliability, and safety factor, Flood frequency studies; Flood forecasting: Rational method, Time Area curves. Introduction top Water Resources: Basic concepts of systems, need for systems approach in water resources,		
2. Reservoir sedimentation:		07 hrs
Reservoir Design Studies: Area-volume curves, types of reservoirs and zones of storage, storage capacity of reservoirs, Mass curve technique, Reservoir flood routing, sedimentation of reservoirs. Development of storage-yield-reliability The process of erosion, factors affecting erosion. Trap efficiency and numerical problems. Reservoir sedimentation, life of a reservoir.		
Unit II		
3. Gravity Dams and Earthen Dams:		07 hrs
Introduction, forces acting on a gravity dam, types of joints. Stress analysis in gravity dam, design of gravity dam, stability analysis and drainage galleries in gravity dams. Introduction, types of Earth dams, Design criteria for Earth dams, causes of failure of earth dams, section of dams, preliminary design criteria and problems on it, control of seepage through earth dams.		
4. Cross Drainage works and Spillways:		10 hrs
Types of cross drainage works. Features of design of cross drainage works. Design of siphon aqueduct. Introduction, essentials of a spillway, Energy dissipation below spillways.		
Unit III		
5. Diversion Head Works:		06 hrs
Introduction, Khosla's theory, method of independent variables, elements of design for surface flow. Design of vertical drop weir on Bligh's theory. Function of canal head regulator.		
Text Books

Program: Civil Engineering		Semester: VI
Course Title: Introduction to structural Dynamics and earthquake engineering		Course Code:23ECVE301
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I Chapter 1. Introduction Introduction to basics of structural dynamics, Basic definition, Nature of dynamic forces, Vibrations and types of vibration, Elements of vibrating system, Equivalent spring stiffness, Equation of motion by D'Alembert's principle, Classification of vibration.		
Chapter 2. Undamped Free Vibration of SDOF Systems Equation of motion; Response of un-damped SDOF systems, Numerical.		
Chapter 3. Damped Free Vibration of SDOF Systems Equation of motion; Response of damped SDOF systems; Critical damping; Logarithmic decrement, Numerical.		
Unit II Chapter 4. Undamped Forced Vibration of SDOF Systems Equation of motion; Response of undamped SDOF systems to harmonic excitation, Transient response; Steady-state response; frequency ratio; Magnification factor, Resonance.		
Chapter 5. Damped Forced Vibration of SDOF Systems Equation of motion; Response of damped SDOF systems to harmonic excitation, Transient response; Steady-state response; Dynamic magnification factor, Resonance.		
Chapter 6. Multi Degree of Freedom Systems Undamped free vibration of multi degree of freedom systems – equations of motion, characteristic equation, natural frequencies and mode shapes; Matrix form of equations of motion, Eigenvalue problem.		
Unit III Chapter 7. Engineering Seismology Introduction to basic of earthquake engineering, Earth composition, Causes of earthquakes, Theory of plate tectonics, Elastic rebound theory, Seismic waves, Classification of earthquakes.		
Chapter 8. Earthquake Resistant Design of Buildings Nature of earthquake force, Philosophy of earthquake resistant design, Calculation of seismic weights, Provisions of IS: 1893 (Part 1)-2016 – General provisions; Seismic zones; Importance factor; Response reduction factor, Equivalent static method, Response spectrum method (no numerical).

Program: Civil Engineering		Semester: VI
Course Title: Advanced Geotechnical Engineering		Course Code:23ECVE301
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Flow of Water through Soils		07 hrs
Darcy's law- assumption and validity, coefficient of permeability and its determination, factors affecting permeability, permeability of stratified soils, Seepage velocity, Superficial velocity and coefficient of percolation, effective stress concept-total stress and effective stress, quick sand phenomena, Capillary Phenomena. Laplace equation- assumptions and limitations only, Characteristics and uses of flownets, Methods of drawing flownets for Dams and sheet piles. Estimating quantity of seepage. Determination of phreatic line in earth dams with and without filter. Piping and protective filter, graded filter.		
2. Shear Strength of Soils		08 hrs
Concept of shear strength, Mohr's strength theory, Mohr-coulomb theory, conventional and modified failure envelopes, Total and effective shear strength parameters, Concept of pore pressure, factors affecting shear strength of soils, Sensitivity and Thixotropy of clay. Measurement of shear parameters- Direct shear test, unconfined compression test, Triaxial compression test and vane shear test, Test under different drainage conditions.		
Unit II		
3. Consolidation of Soils		06 hrs
Definition, Mass-spring analogy, Terzaghi's one dimensional consolidation theory-assumption and limitations. Normally consolidated, under consolidated and over consolidated soils, pre-consolidation pressure and its determination by Casagrande's method. Consolidation characteristics of soil (C_c , a_v , m_v and C_v), Time rate of consolidation. Laboratory one dimensional consolidation test, Determination of consolidation characteristics of soils-compression index, and coefficient of consolidation, determination of coefficient of consolidation by square root of time fitting method, logarithmic time fitting method.		
4. Lateral Earth Pressure		06 hrs
Active and Passive earth pressures, Earth pressure at rest, Earth pressure coefficients. Earth pressure theories- Rankine's and Coulomb's –assumptions and limitations, Graphical solutions for active earth pressure Cullman's and Rebhann's methods, Lateral earth pressure in cohesive and cohesionless soils, Earth pressure distribution.		
5. Shallow Foundation		04 hrs
Definitions of ultimate, net and safe bearing capacities, Types of shallow foundation, Allowable bearing pressure. Terzaghi's, Brinch Hansen's and IS Code method bearing capacity equations-assumptions and limitations. Bearing capacity of footing subjected to eccentric loading. Effect of ground water table on bearing capacity. Plate load test, Standard penetration test, cone penetration test. Settlement analysis of foundation, Data for settlement analysis, Settlement of tank foundation.		

Unit III

6. Deep Foundation

05 hrs

Types of Deep foundation. Piles, Drilled Piers and Caissons, Classification of piles, Load carrying capacity of pile. Design of pile and pile groups. Design of pile cap, Settlement Analysis for pile group. Batter piles and under reamed piles. Design aspects of Well foundations.

7. Stability of Earth Slopes

04 hrs

Types of slopes, causes and type of failure of slopes. Definition of factor of safety, Stability of finite and infinite slopes- Method of slices, Friction Circle method, Fellenius method, Taylor's stability number.

Program: Civil Engineering		Semester: VII
Course Title: Design of Sub-structures		Course Code:15ECVE401
L-T-P: 3-0-0	Credits: 3	Contact Hours: 3 hrs/week
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 40	Examination Duration: 3hrs	
Unit I		
1. Soil Exploration		03 hrs
Subsurface exploration programme for civil engineering projects. Interpretation of soil parameters. Tests on disturbed and undisturbed soil samples, Soil exploration report.		
2. Shallow Foundations		06 hrs
Design Criteria. Types of shallow foundations. Bearing capacity theories. Bearing capacity from field tests. Use of different foundation models. Design of individual and combined footings. Design of raft foundations - Conventional methods. Modulus of subgrade reaction. Beams on elastic foundations. Analysis of footings by Finite Difference.		
3. Pile Foundations		06 hrs
Load carrying capacity of pile. Pile integrity test, Design of pile and pile groups. Batter piles and under reamed piles. Design of pile cap. Design of axially and laterally loaded piles.		
Unit II		
4. Drilled Piers and Caissons		06 hrs
Construction, advantages and disadvantages of drilled piers. Design of open, pneumatic and floating caissons. Advantages and disadvantages of floating caissons.		
5. Well Foundation		05 hrs
Different shapes and characteristics of wells. Components of well foundation. Forces acting on well foundation. Sinking of wells. Causes and remedies of tilts and shifts.		
6. Foundations on Expansive Soils		05 hrs
Definition, Identification, Structure, Index properties of expansive soils, Swell potential and Swell pressure, Free swell, CNS layer, foundation treatment for structures in expansive soil.		
Unit III		
6. Machine Foundations		05 hrs
Basic terminologies. Design criteria for machine foundations. Vibration analysis. Methods of analysis. Determination of soil parameters. Foundations for reciprocating machines. Foundations for impact type of machines. Vibration isolation.		
7. Foundations for Special Structures		04 hrs
Foundations for tall structures - Water tanks, Chimneys, Antenna towers and Radar units.

Program: BE Civil Engineering		Semester: VII
Course Title: Advanced RCC		Course Code: 15ECVE402
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks: 100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1 Design of Combined and Raft Footing		10 Hrs
Design of Combined footings: rectangular and trapezoidal Combined Footings. Design of raft footing as per IS:456:2000 Guidelines		
2. Design of Special type of slabs		10 Hrs
Introduction to different types of slab system, Design of grid slab, Yield line analysis of slabs.		
Unit II		
4. Retaining Walls		07 Hrs
Design of Cantilever and Counter-fort type of retaining walls, buttress type retaining walls.		
5. Design of continuous beams		06 Hrs
Bending moment envelopes moment redistribution as per IS Code provisions		
Unit III		
6. Design of Water tanks		07 Hrs
Design of circular and rectangular water tanks, resting on ground, underground water tanks		
Text Books		
<ol style="list-style-type: none"> 1. Jain, A.K., <i>Limit State Method of Design</i>, 7ed., Nemichand and Bros., Roorkee, 2012. 2. Punmia B.C., Ashok Kumar Jain, and Arun Kumar Jain, <i>Limit State Design of Reinforced Concrete</i>, Laxmi Publications Pvt. Ltd., New-Delhi-2016..

Program: BE Civil Engineering		Semester: VII
Course Title: FEM Analysis		Course Code:15ECVE403
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1. Introduction to Finite Element method.		05 Hrs
Introduction, Basic concepts on finite element analysis, Introduction to nodes, elements, and shape functions, Steps in Finite Element Analysis, Key concepts and Terminologies.		
2. Element Properties.		05 Hrs
Natural Coordinates, Triangular Elements, Rectangular Elements, Introduction to Weighted integrals, Integration by parts-Review, Gradient and Divergence Theorems, Functionals.		
3. Finite Element Formulation Technique.		05 Hrs
Virtual Work and Variational Principle (Rayleigh-RitzMethod), Weighted Integrals and Weak Formulation, Different types of weighted integral methods such as Galerkin Method, Petrov-Galerkin Method, Collocation Method and Method of Least-squares		
Unit II		
4. Second Order Boundary Value Problem.		08 Hrs
FEA formulation of 2 nd order boundary value problem, Development of element level equations, Assembly of element level equations and implementation of boundary conditions, Assembly process and Connectivity matrix.		
5 Applications of Second Order Boundary Value Problem.		10 Hrs
Radially symmetric problems, One-dimensional heat transfer problem, Euler-Bernoulli beam, Shear deformable beam, Eigen value problems, Introduction to time dependant problems		
Unit III		
6. FEM Program		07 Hrs
Structure of FEM program for FEM Analysis, Description of different modules in FEM software (ABAQUS), Introduction to different types of analysis, Pre and post processing. Comparison of manually solved problems with software results.		
Text Books

Program: BE Civil Engineering		Semester: VII
Course Title: Construction Methods		Course Code: 18ECVE401
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks: 100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1. Planning for earthwork construction.		04 Hrs
Planning, Graphical presentation of Earthwork, Earthwork quantities, Mass diagram and its applications, Pricing of earthwork operations.		
2. Compaction and Stabilization Equipment		05 Hrs
Compaction of soil and rock, Types of compaction equipment, roller production estimating, Dynamic compaction, Soil stabilization, stabilizing soils with lime, Cement-soil stabilization.		
3. Excavators and loaders		06 Hrs
Hydraulic Excavators, selection of front shovels, calculating shovel production, height of cut effect on shovel production, angle of swing effect on shovel production, Loaders – introduction, Loader buckets/attachments, operating specifications, Loader production rates, calculating wheel loader production, Calculating track loader production, Loader safety		
Unit II		
4. Drilled Shaft Foundations		05 Hrs
Introduction, Construction of drilled shafts – dry method of construction, casing method of construction, wet construction method, Installation of casings, Steel cages, Placement of concrete, Dewatering, open dewatering systems, deep well systems, well point systems – Types, techniques, Basement waterproofing systems.		
5. Formwork Systems		06 Hrs
Introduction, formwork materials, shores and scaffolding, Vertical formwork systems – Conventional wall/columns forming systems, Modular panel column form, adjustable wraparound column forms, circular steel forms for round columns, wall panel system, single sided wall formwork, formwork ties, Horizontal formwork systems – conventional wood form and metal systems, cup-lock type scaffolding system, slab flex system, tunnel form, flying formwork system, crane-jumped formwork, automatic climbing formwork, self-rising core system, Monolithic Formwork System.		
6. Concrete and Conveying Systems		06 Hrs
Introduction, Concrete – Mixers, Concrete plants, Pre-tensioning and Post tensioning, Transporting and handling – Concrete chute, concrete mixer with lift, concrete skip, truck mixer concrete pumps, concrete belt conveyors, concrete pump truck, trailer pump and pipeline with tower-mounted boom, trailer mounted pumps, pipeline system, mobile concrete placing booms, finishing.		
Unit III		
7. Cranes		05 Hrs
Major cranes types, Mobile cranes, Crawler cranes, Telescoping-boom truck-mounted cranes, Lattice-boom truck-mounted cranes, Rough-terrain cranes, modified cranes for heavy lifting, crane booms, lifting capacities of cranes, Rated loads for lattice and telescopic boom cranes,		

Tower cranes – classifications, operation, Tower crane selection, Rated loads for tower cranes, rigging, slings, safety.

8. Modular Construction Practices:

03 Hrs

Introduction to Modular Construction, Modular coordination, Modular Standardization, Modular System Building, Limitation and Advantages of Modular Construction

Text Books

1. S. C. Sharma, *Construction Equipment and Management*, Khanna Book Publications, 2016
2. Peurifoy, *Construction Planning, Equipment & Method*, 7ed., Tata McGraw Hill Education Pvt. Ltd., New Delhi, 2010.
3. Basem M, *Construction Technology for High-rise Buildings-Handbook*, 2014

Reference Books:

1. Stephens W. Nunnally, *Managing Construction Equipment*, 2ed, Pearson Publications, USA, 2000.
2. Gupta B. L., Amit Gupta, *Construction Management and Machinery*, 5ed, Standard Publications, New Delhi, 2015...

Program: BE Civil Engineering		Semester: VII
Course Title: Advanced Project Management		Course Code: 19ECVE401
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks: 100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1. Operation Research in Management		10 Hrs
Introduction, definition, phases, scope, characteristics, limitations of operational research, and management decision making. Methodology and applications of operational research. Linear programming, applications, formulations of LP models. Graphical methods, Simplex method, Transportation Models-Balanced & Un-balanced type of problems		
2. Cost Control		05 Hrs
Introduction, project costs – direct and indirect, cost optimization through networks, use of simplex and dual simplex methods of linear programming to optimize construction costs, project cost formulation.		
Unit II		
3. Construction Site Layout		05 Hrs
Introduction, Objectives of preparing a site layout, Factors affecting the site layout, documentation study before site layout, Storing and stacking of materials on site, Location of machinery and equipment, Stack size of common building materials, Preparation of a site layout.		
4. Construction Disputes and their Settlements		05 Hrs
Introduction, development of disputes, types of disputes, modes of settlements, settlement by direct negotiations between the client and contractor, settlement through arbitration, arbitration act 1940, powers of an arbitrator as per 1940 act, settlement through courts.		
5. Risks and Insurance in Construction		05 Hrs
Introduction, risk, risk identification in construction, risk analysis and evaluation process, response management process, insurance in construction, principles of insurance, project insurance, contractor's all risk insurance, fire policy, plant and machinery insurance, liquidity damages insurance, professional indemnity policy.		
Unit III		
6. Construction Safety Management		05 Hrs

Introduction, evolution of safety, Accident causation theories, unsafe conditions and acts, health and safety act and regulations, role of safety personal, causes of accidents, principles of safety, safety and health management system.

7. Construction Labour and relevant Laws**05 Hrs**

Introduction, construction labour in India, payment of wages to labour, Labour Laws, payment of wages act 1936, minimum wages act 1948, workers compensation act 1923, contract labor act 1970, employees state insurance act 1948, bonus act, employee's provident fund act, trade unions and their role.

Text Books

1. Kumar Neeraj Jha, *Construction Project Management: Theory and Practice*, 2ed., Pearson Publications, 2015.

Program: BE Civil Engineering		Semester: VII
Course Title: Construction Contract Management		Course Code: 23ECVE401
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks: 100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1. Introduction to Contracts		07 Hrs
Introduction to Contracts, Parts of contracts, Importance of contract, Essential elements of valid contracts, Important conditions of contracts, Development of a project, Characteristics of a good contract, legal enforceability of contract, Breach & termination of contract, Major stakeholders in contracts		
2. Construction Contracts		08 Hrs
Types of contracts: Lump sum contracts, Fixed price contracts, Percentage rate contracts, Cost Plus contract, Target contracts, Design build contracts, Turn Key contract, BOT contracts, Roles and functions of parties to the contract, Formation of contract, Contract duration & price. Contract formats: FIDIC, CPWD, Special condition of contracts (SCC), PWD procedure of execution a project..		
Unit II		
3. Tenders		05 Hrs
Process of tendering, Tender notice, EOI, RFQ & RFP, bid security, prequalification process, bidding models & bidding strategy, Tender submission & evaluation, Tender rejection, security deposits/performance guarantee & defect liability, Contract agreement & contract document. Performance parameter: Delays, Penalties & Liquidated damages, Force majeure, Suspension & termination.		
4. Conditions of Contract		05 Hrs
General conditions & special condition of contracts, contract condition for payments, Time delays, Scope changes, Extra claims, Termination of contract, Liquidated damages & bonus for early completion, Subletting, Breach of contracts, Arbitration, Settlement of accounts & final payment		
5. Specifications		03 Hrs
Purpose of specifications, Types of specifications, Importance of specifications. Writing of specifications, Specifications for excavation, concrete materials, reinforcement, brickwork, cement plaster, doors windows & ventilators.		
Unit III		
6. Procurement & risk allocation		04 Hrs
Type of risk in construction contracts, dealing with risk, allocating risk through methods of FMCD2009 / 2.0		

payment, Procurement criteria, Identifying and choosing procurement methods

7. Management contracting

03 Hrs

Contractual relationship in management contracting, Use of management contracting, Principles of management contracting, risk in management contracting, approach to management contracting.

Reference Books:

1. Explanation of Indian Contract Act: Mulla and Sanjeeva Rao, B. D. Virmani, B.T. Gajaria
2. Construction contracting, Clough Richarch, John Wiley & Sons, New York, 1986
3. Construction Contract Management, Prakash V. A., NICMAR, BOMBAY
4. V.K. Raina, Raina's Construction and Contract Management Vol. 1 (2nd edition), SPD publishers, 2009.
5. Patil B. S. " Building and Engineering Contracts
6. Handbook of contracts: Hudson

Program: BE Civil Engineering		Semester: VII
Course Title: Solid Waste Management		Course Code:15ECVE407
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I 1. Introduction 05 Hrs Solid waste -Definition, Land Pollution -scope and importance of solid waste management, functional elements of solid waste management. SOURCES: Classification and characteristics- municipal, hospital / biomedical waste, Quantity -Generation rate, methods. Latest Trends in SWM: (1) Legacy wastes and landfill mining: Risks and Rewards (2) Centralized and decentralized SWM approach in Villages, ULBs and Metro cities: Pros and Cons. 2. Collection and Transportation 05 Hrs Systems of collection, collection equipment, garbage chutes, transfer stations -bailing and compacting, route optimization 3. Processing Techniques 05 Hrs Components separation, volume reduction, size reduction, chemical reduction and biological processing.		
Unit II 4. Disposal Methods 08 Hrs Factors affecting disposal methods, Selection of site, Open dumping, ocean disposal, Incineration processes, Pyrolysis, Composting- Aerobic and anaerobic composting, Indore and Bangalore processes, Vermi composting. 5. Sanitary Land Filling 07 Hrs Methods-Trench area, Ramp and pit method, site selection, basic steps involved, cell design, prevention of site pollution, leachate collection and control methods, gas collection systems.		
Unit III 6. Biomedical waste management 05 Hrs Types of wastes, sources of biomedical waste, Categories and classification of biomedical waste, hazard of bio medical waste, waste minimization, treatment and disposal. The Biomedical Waste Management & Handling) Rules, 2016.		

7. Hazardous waste management

05 Hrs

Source, generation rates, characteristics of hazardous wastes and their regulation, handling, treatment and disposal. Hazardous Waste (Management and Handling) Rules, 2016.

Text Books

1. George Tchobanoglous, Hilary Theisen and Vigil S. A., *Integrated solid waste management: engineering principles and management issues*, McGraw-Hill Inc, US, 2011.

Course Title: Advanced Waste Water Treatment		Course Code:15ECVE408
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1.Introduction		03 Hrs
Wastewater Characteristics, Effluent Quality Standards, Receiving Stream Quality		
2. Primary Treatment		06 Hrs
Screening, Grit removal, Neutralization, equalization, Sedimentation, Flotation (oil & grease removal)		
3. Secondary Treatment		06 Hrs
Fundamental concept of reactors: Mass balance relationships, analysis and descriptions of reactors- batch, completely mixed flow and plug flow oxygen requirement in aerobic process		
Unit II		
4. Biological Treatment -		10 Hrs
Activated Sludge Process: Substrate Utilization and Biomass Growth, Kinetic Parameters, Process Description and its Modification, Process Design, Biofilm Process: Constructed Wetlands/ Natural Treatment Systems, Sequencing Batch Reactors (SBR), Moving Bed Bio film Reactor(MBBR), Aerated lagoons.		
5.Advanced Treatment Processes- -		06 Hrs
Chemical Coagulation, Carbon Adsorption, Phosphorus Removal, Nitrogen Removal (Nitrification/Denitrification), Media Filtration, UV Disinfection		
Unit III		
6. Solids Handling Processes		09 Hrs
Gravity Thickening, Flotation Thickening, Dewatering, Pressure Filtration, Stabilization, Aerobic and Anaerobic Digestion, Composting, Drying, Incineration, Landfilling, Land Application		
Text Books		
1. Eddy and Metcalf , <i>Wastewater Engineering – Treatment and Reuse</i> ,Tata McGraw Hill Education Pvt Ltd., New Delhi, 2003.		
2. Modi, P.N., <i>Sewage Treatment and Disposal Engg.</i> , Standard Book House, New Delhi, 2000.

Program: BE Civil Engineering		Semester: VII
Course Title: Air Pollution		Course Code:15ECVE409
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	

Unit I

1. Introduction

05 Hrs

Definition -Classification and properties of Air pollutants, Primary and secondary Air pollutants, Concentrations of Air pollutants and sources. Behavior and Fate of Air Pollution: Chemical reaction in the Atmosphere, photochemical Smog. Air Pollution due to Automobiles.

2. Effects of Air Pollution

05 Hrs

On human health, Animals, Plant and properties, Major Episodes- Case Studies. Global Environmental Issues- Acid Rain, Green House Effect, Global warming, Ozone layer depletion.

3. Meteorology

05 Hrs

Introduction -Meteorological Variables, Lapse Rate – Adiabatic -Dispersion, inversion, stability conditions, wind rose, general characteristics of stack plumes

Unit II

4. Sampling and Analysis of Air Pollutants

05 Hrs

Sampling and measurement of Gaseous and particulate pollutants, stack sampling, smoke and its measurements.

5. Control of Air Pollutants

10 Hrs

Control methods -Particulate emission control, design of gravitational settling chambers, design of cyclone separators, fabric filters, Electrostatic precipitators, wet scrubbers, control of gaseous emissions.

Unit III

6. Environmental Impact Assessment

05 Hrs

Environmental Impact Assessment in industrial plant locations and planning. Standards and legislation -Air quality and emission standards-legislation and regulation, Air pollution index, EIA Case Study-Mining. Introduction to Air Quality Modelling.

Text Books

1. Rao, H.V.N., and Rao, M.N., *Air Pollution*, Tata McGraw Hill Education Pvt. Ltd., New

Delhi, 2007.

2. Rao, C.S., *Environmental Pollution Control*, New Age International Pvt. Ltd, New Delhi, 2006

Reference Books:

1. A.O.C., Stem, *Air Pollution -Vol I -IV*, Academic Press., 2010.
2. Henry C Perkins, *Air pollution*, Tata McGraw Hill Education Pvt Ltd., New Delhi, 1974.

Program: BE Civil Engineering		Semester: VIII
Course Title: Nano Composite Materials		Course Code:15ECVO401
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	

Unit I

1.Introduction

06 Hrs

Introduction to materials, traditional materials, development, properties, strength of and mechanical properties of materials , introduction, definition, classification and characteristics of composite materials - fibrous composites, laminated composites, particulate composites

2.Fiber and matrices

05 Hrs

Carbon fibers, glass fibers, silicon carbide and organic fibers. Polymer matrices, metal matrices and ceramic matrices.

3.Fabrication and application

05 Hrs

Polymer composites, metal composites and ceramic composites Application of composites: Automobile, Aircrafts, missiles, Space hardware, Electrical and electronics, marine, recreational and Sports equipment, future potential of composites

Unit II

4. An overview of Nanoscience & Nanotechnology

06 Hrs

Historical background – nature, scope and content of the subject – multidisciplinary aspects – industrial, economic and societal implications.

5.Experimental Techniques and Methods

05 Hrs

For investigating and manipulating materials in the nano scale – electron microscope – scanning probe microscope – optical and other microscopes

6.Introduction to Nanomaterials

05 Hrs

Carbon Nanotubes , synthesis and purification – filling of nanotubes – mechanism of growth – electronic structure – transport properties – mechanical and physical properties – applications

Unit III

7.Introduction to nano-composite

Nano composite polymer matrix, nano composite ceramic matrix, nano composite metal matrix Applications in engineering, future scope of nano-composite, research, training in development of nano-composite materials.

8.Safety and environmental aspects

Safety and environmental aspects of nano-materials, future challenge, cost optimization and

fabrication process of nano composite materials

Text Books

1. Hull D. and Clyne T.W., *Introduction to Composite Materials*, Cambridge University Press, 2nd edition, 1996.

Program: BE Civil Engineering		Semester: VIII
Course Title: Optimization Techniques		Course Code:15ECVO402
L-T-P: 3-0-0	Credits: 03	Contact Hours: 40
ISA Marks: 50	ESA Marks: 50	Total Marks:100
Teaching Hours: 03	Examination Duration: 3Hrs	
Unit I		
1. Introduction		04 Hrs
Engineering applications, optimum design methods, Mathematical statement, Terminology and basic concepts, Classification of optimization problems, Optimization Techniques.		
2. Classical Optimization Techniques		05 Hrs
Single variable optimization, Multivariable optimization without constraints, Multivariable optimization with constraints -Lagrange multiplier method and constrained variation method – Kuhn-tucker conditions.		
3. Linear Programming		05 Hrs
Standard form LP, Geometry and solution of LP , Pivotal reduction Simplex method, two phase simplex method, revised simplex method		
Unit II		
4. Non-linear Unconstrained Optimization Search Techniques		08 Hrs
One dimensional problems, Elimination Methods - Fibonacci Method, Dichotomous Search, Golden Section Method, Interpolation methods - Quadratic Interpolation Method – Quadratic Interpolation Method, Direct Root Methods, Direct search method- Powell Fletcher method, Hooke and Jeeve's method, Descent methods.		
5. Non-linear Constrained Optimization Search Techniques		08 Hrs
Direct Methods - Feasible Direction method, sequential linear programming techniques Indirect Method - Interior and Exterior penalty function method.		
Unit III		
6. Geometric Programming		06 Hrs
Posynomial, Unconstrained Minimization Problem by Differential Calculus, Constrained Minimization using Geometric Programming,		
7. Dynamic Programming		04 Hrs
Multistage decision concert, principles of optimality.		
Text Books
