### **Vision and Mission of KLE Technological University**

#### **Vision**

KLE Technological University will be a national leader in Higher Education—recognised globally for innovative culture, outstanding student experience, research excellence and social impact.

#### **Mission**

KLE Technological University is dedicated to teaching that meets highest standards of excellence, generation and application of new knowledge through research and creative endeavors.

The three-fold mission of the University is:

- To offer undergraduate and post-graduate programs with engaged and experiential learning environment enriched by high quality instruction that prepares students to succeed in their lives and professional careers.
- To enable and grow disciplinary and inter-disciplinary areas of research that build on present strengths and future opportunities aligning with areas of national strategic importance and priority.
- To actively engage in the Socio-economic development of the region by contributing our expertise, experience and leadership, to enhance competitiveness and quality of life.

As a unified community of faculty, staff and students, we work together with the spirit of collaboration and partnership to accomplish our mission.

### **Vision and Mission Statements of the Chemical Engineering Department**

#### **Vision**

To be a department of excellence in education and research, meeting the requirements of industry and society.

#### **Mission**

- To create graduates with sound knowledge in the theoretical and applied aspects of Chemical Engineering.
- To prepare graduates for professional practice and higher studies in core and multidisciplinary areas through seminars and projects.
- To achieve excellence in academics and research through quality education and student support systems.
- Foster an industry-institute relationship to bridge the gap between theory and practice.
- To facilitate employability and entrepreneurship through holistic education and an alumni network.

### Program Educational Objectives/Program Outcomes and Program-Specific Objectives

Program Educational Objectives -PEOs
Department of Chemical Engineering accomplishments that graduates are expected to attain after 3 to 5 years of graduation
<b>PEO1:</b> Integrate science and engineering with interdisciplinary areas to formulate, analyze, and solve chemical and allied engineering problems.
<b>PEO2:</b> Pursue careers in chemical engineering and allied areas to achieve professional growth in industry and academia.
<b>PEO3:</b> Exhibit professional ethics and address issues of environment and sustainability.
Program Outcomes-POs
<b>PO1: Engineering Knowledge:</b> Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialisation as specified in WK1 to WK4, respectively, to develop solutions to complex engineering problems.
<b>PO2: Problem Analysis:</b> Identify, formulate, review research literature and analyse complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
<b>PO3: Design/Development of Solutions:</b> Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
<b>PO4: Conduct Investigations of Complex Problems:</b> Conduct investigations of complex engineering problems using research-based knowledge, including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
<b>PO5: Engineering Tool Usage:</b> Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling, recognising their limitations to solve complex engineering problems. (WK2 and WK6)
<b>PO6: The Engineer and The World:</b> Analyse and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
<b>PO7: Ethics:</b> Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
<b>PO8: Individual and Collaborative Team work:</b> Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
<b>PO9: Communication:</b> Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
<b>PO10: Project Management and Finance:</b> Apply knowledge and understanding of engineering management principles and economic decision-making, and apply these to multidisciplinary environments.
<b>PO11: Life-Long Learning:</b> Recognise the need for, and have the preparation and ability for: <ul style="list-style-type: none"> <li>i. Independent and life-long learning,</li> <li>ii. Adaptability to new and emerging technologies, and</li> <li>iii. Critical thinking in the broadest context of technological change. (WK8)</li> </ul>

**Program Specific Objectives - PSOs**

**PSO 1 - Expertise in core chemical Courses:** Exhibit basic understanding of process calculations, reaction engineering and process equipment design.

**PSO 2 - Flair to industry:** Acquire practical knowledge of unit operations and unit processes through industry visits, internships and projects.

**PSO 3 - Expertise in allied areas:** Apply principles of chemical engineering to bio-energy, petroleum, biochemical and environmental engineering.

**Knowledge and Attitude Profile (WK)**

**WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.

**WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.

**WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.

**WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.

**WK5:** Knowledge, including efficient resource use, environmental impacts, whole-life cost, reuse of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.

**WK6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.

**WK7:** Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.

**WK8:** Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.

**WK9:** Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

### Curriculum Structure - Overall

Semester: 1 to 8 (2022- Batch)								Total Program Credits:178
Course with course code	I	II	III	IV	V	VI	VII	VIII
	Single Variable Calculus (18EMAB101)	Multivariable Calculus (18EMAB102)	Calculus & Integral Transforms (Diploma Students) (15EMAB231)	Vector Calculus & Differential Equations (Diploma Students) (15EMAB241)	Numerical Methods and Statistics (Diploma Students) (24EMAB301)	Professional Aptitude & Logical Reasoning (16EHSC301)	Process Equipment Design and Drawing (22ECEC401)	Program Elective - 6 (22ECEE4XX)
	Engineering Chemistry (15ECHB101)	Engineering Physics (15EPHB102)	Statistics and Integral Transforms (15EMAB201)	Numerical Methods and Partial Differential Equations (19EMAB206)	Process Engineering Economics & Plant Design (22ECEC301)	Chemical Reaction Engineering - II (22ECEC306)	Process Control & IIOT (22ECEC402)	Open Elective (22ECEO45X)
	C Programming for Problem solving (18ECSP101)	Engineering Mechanics (15ECVF102)	Momentum Transfer (22ECEC201)	Industrial Pollution Control (22ECEC205)	Computer Applications, Modelling and Simulation (22ECEC302)	Mass transfer-II (22ECEC307)	Program Elective- 03 (22ECEE4XX)	Internship – Training (Optional In place of 1 & 2) (22ECEI493)
	Engineering Exploration (15ECRP101)	Computer Aided Engineering Drawing (15EMEP101)	Particulate Technology (22ECEC202)	Process Heat Transfer (22ECEC206)	Bioprocess Engineering (22ECEC303)	Program Elective – 1 (22ECEE3XX)	Program Elective – 4 (22ECEE4XX)	Capstone Project / Internship – Project (22ECEW402/ 22ECEW494)
	Basic Electronics (18EECF102)	Basic Electrical Engineering (18EEEF102)	Material & Energy Balance Calculations (22ECEC203)	Chemical Engineering Thermodynamics (22ECEC207)	Mass Transfer I (22ECEC304)	Program Elective – 2 (22ECEE3XX)	Program Elective – 5 (22ECEE4XX)	
	Basic Mechanical Engg. (15EMEF101)	Design Thinking for Social Innovation (20EHSP101)	Chemical Process Industries (22ECEC204)	Material Science & Engineering (22ECEC208)	Chemical Reaction Engineering - I (22ECEC305)	Chemical Reaction Engineering Lab (22ECEP303)	Process Control Lab (19EMEP401)	
	Professional Communication (15EHS101)	Engineering Physics Lab (16EPHP102)	Momentum Transfer Lab (22ECEP201)	Computer-Based Chemical Calculations Lab (22ECEP204)	Computer Applications & Simulation Lab (22ECEP301)	Mass Transfer Lab (22ECEP304)	Senior Design Project (22ECEW40)	
			Particulate Technology Lab (22ECEP202)	Process Heat Transfer Lab (22ECEP205)	Pollution Control Lab (22ECEP302)	Minor Project (22ECEW302)	CIPE/EVS (15EHS401)	
			Computer aided Drawing Lab (22ECEP203)	Technical Chemistry Lab (22ECEP206)	Mini Project (22ECEW301)	Industry Readiness & Leadership Skills (22EHS302)	REU (22ECEE490)	
			Corporate Communication	Problem Solving & Analysis (19EMEP202)	Arithmetical Thinking & Analytical Reasoning (22EHS301)			
<b>Credits</b>	<b>23</b>	<b>21</b>	<b>22</b>	<b>24</b>	<b>24.5</b>	<b>23.5</b>	<b>22</b>	<b>17</b>

### Curriculum Content - Course wise (Semester – 1)

<b>Program: UG</b>		<b>Semester: I</b>
<b>Course Title: Single Variable Calculus</b>		<b>Course Code: 18EMAB101</b>
<b>L-T-P: 4-1-0</b>	<b>Credits: 05</b>	<b>Contact Hours: 6 hrs/week</b>
<b>CIE Marks: 50</b>	<b>SEE Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 50</b>	<b>Examination Duration: 3hrs</b>	
<b>Unit I</b>		
<b>Chapter 1. Functions, Graphs and Models</b> Functions, types of functions, transformations and models (Linear, exponential, trigonometric). MATLAB: Graphing functions, Domain-Range and Interpreting the models		
		07 Hrs
<b>Chapter 2. Calculus of functions and models</b> Limit of a function, Infinite limits- graph, Continuity and discontinuity, Intermediate value theorem statement, Roots of the equation using Bisection Method and Newton-Raphson Method Interpretation of derivative as a rate of change, all the rules of derivatives (List only), Maxima, Minima and optimisation problems. Curvature and Radius of Curvature, Indeterminate forms, L- Hospital's rule- Examples MATLAB: optimisation problems. Curvature problems		
		13 Hrs
<b>Unit II</b>		
<b>Chapter 3. Infinite Series</b> Definition, Convergence of series, Tests of convergence – p-series, Alternating series. Power series, radius of convergence, Taylor's and Maclaurin's series, Applications of Taylor's and Maclaurin's series, MATLAB: Convergence of series		
		06 Hrs
<b>Chapter 4. Integral calculus</b> Tracing of standard curves in Cartesian form, Parametric form and Polar form; Beta and gamma function, relation between them, evaluation of integrals using Beta and gamma functions; Applications to find arc length, Area, Volume and surface area (Cartesian, parametric and polar curves). Approximate integration- Trapezoidal rule, Simpson's 1/3 rule MATLAB: problems on arc length, area, volume and surface area		
		14 Hrs
<b>Unit III</b>		
<b>Chapter 5. Ordinary differential equations of first order</b> a. Introduction to Initial Value Problems. Linear and Bernoulli's equations, Exact equations and reducible to exact form, Numerical solution to Initial Value problems-Euler's method, Modified Euler's method and Runge-Kutta method b. Applications of first-order differential equations: Orthogonal trajectories, growth and decay problems, mixture problems, Electrical circuits, and falling bodies. MATLAB: Solve differential equations		
		10 Hrs
<b>Text Books:</b> 1. Early Transcendentals Calculus- James Stewart, Thomson Books, 7 <sup>th</sup> ed., 2010.		
<b>Reference Books:</b> 1. Calculus Single and Multivariable, Hughes-Hallett, Gleason, Wiley India Ed, 4 <sup>th</sup> ed, 2009. 2. Thomas Calculus, George B Thomas, Pearson India, 12 <sup>th</sup> ed., 2010		

<b>Program: UG</b>		<b>Semester: I</b>
<b>Course Title: Engineering Chemistry</b>		<b>Course Code: 15ECHB101</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 03</b>	<b>Contact Hours: 3 hrs/week</b>
<b>CIE Marks: 50</b>	<b>SEE Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3hrs</b>	
<b>Unit-I</b>		
<b>Chapter 1. Pure substances</b>		
Properties of pure substance (Steam), two property rule, T-H diagram, formation of steam at constant pressure. Different states of steam: Wet steam-dryness fraction, determination by separating-throttling calorimeter, Dry saturated steam, Superheated steam, thermodynamic parameters of steam, steam table, numerical problems. T-V, P-V & P-T diagrams of a pure substance, taking water as an example. Triple point & critical point. Sub-cooled liquid, saturated liquid, mixture of saturated liquid & vapour, Saturated vapour & superheated vapour states.		
08 Hrs		
<b>Chapter 2. Real and ideal gases</b>		
Properties of Real and Ideal Gases. Vander Waal's equation, Vander Waal's constant in terms of critical properties –numerical problems. Compressibility factor, compressibility chart, and the Law of Corresponding States. Ideal Gas: Equation of State, Internal Energy, and Enthalpy as Functions of Temperature. Ideal gas mixture: Dalton's law of additive pressures and Amagat's law of additive volumes. Terms used in the analysis of a mixture of gases - numerical problems.		
05 Hrs		
<b>Chapter 3. Engineering Materials</b>		
Ferrous metals – properties and applications of Iron and Steel. Ferrous metals – properties and Applications of copper and aluminium. Cement- properties, mechanism of setting & hardening of cement and applications. Lubricants- Properties –viscosity, flash point, fire point, cloud point and pour point, mechanism-hydrodynamic and boundary lubrication and applications.		
03 Hrs		
<b>Unit – II</b>		
<b>Chapter 4. Fuel Chemistry</b>		
Fuels, classification, determination of calorific value of a fuel (solid/liquid fuel by Bomb calorimeter), coal analysis- Numerical problems. Petroleum - cracking, Octane number, Cetane number, reforming, and the mechanism of knocking in Petrol and Diesel engines. Renewable energy sources – power alcohol and biodiesel.		
06 Hrs		
<b>Chapter 5. Energy Storage and Conversion Systems</b>		
Electrode potential, Nernst equation, Formation of a cell; Reference electrodes – Calomel electrode and Determination of electrode potential using calomel electrode, numerical problems on E, E <sub>cell</sub> , E <sup>o</sup> <sub>cell</sub> . Batteries: Classification, characteristics, Lead-acid and Li ion batteries. Fuel cells: Methanol-O <sub>2</sub> fuel cell.		
06 Hrs		
<b>Chapter 6. Surface Chemistry</b>		
Corrosion: Electrochemical theory of corrosion taking iron as an example; corrosion control – galvanisation and tinning. Metal Finishing: Technological importance of metal finishing, Electroplating, factors affecting the nature of electrodeposit- Throwing power of plating bath solution- numerical problems. Electroless plating – advantages over electroplating, electroless plating of copper and its applications in the manufacture of printed circuit boards.		
04 Hrs		

### Unit – III

#### Chapter 7. Polymers

Introduction, free radical mechanism of addition polymerisation taking Ethylene as an example; commercial polymers - Plexiglass, polyurethane and polystyrene. Adhesives – synthesis, properties and applications of Epoxy resins; Polymer Composites - structure, properties and applications of Kevlar and carbon fibre.

04 Hrs

#### Chapter 8. Environmental Chemistry:

Water: Sources and ill effects of water pollutants- fluoride and nitrate; Determination of total hardness of water by EDTS method – numerical problems. Sewage: Determination of biological oxygen demand by Winkler's method – numerical problems and determination of chemical oxygen demand - numerical problems.

04 Hrs

#### Text Books:

1. A Text book of Engineering Chemistry, 1<sup>st</sup> edition, Dara. S. S, S. Chand & Co. Ltd., 2009, NewDelhi.
2. A Text Book of Engineering Chemistry, 16<sup>th</sup> edition, Jain P.C. and Jain M, Dhanpat RaiPublications, 2006, New Delhi.

#### Reference Books:

1. An Introduction to Thermodynamics, Y V C Rao, Revised Edition, University Press, 2009 Hyderabad.
2. Hand book of batteries, David Linden, Thomas B Reddy, 3<sup>rd</sup> edition, McGraw-Hill Publications, 2001.
3. Puri B. R., Sharma L.R. and Pathania M. S., Principles of Physical Chemistry, 33<sup>rd</sup> Edition, S Nagnin Chand & Co., 1992.
4. Fontana M G, Corrosion Engineering, 3<sup>rd</sup> Edition, McGraw-Hill Publications, 1986.
5. Billmeyer F W, Textbook of Polymer Science, John Wiley & Sons, 1994.
6. Principles of Polymer Chemistry- A. Ravve, Pleum Press, New York and London.
7. Callister William D, Materials Science and Engineering: An Introduction, John Wiley and Sons 2007: 721 pages.

<b>Program: UG</b>		<b>Semester: I</b>
<b>Course Title: C Programming for Problem Solving</b>		<b>Course Code: 18ECSP101</b>
<b>L-T-P: 0-0-3</b>	<b>Credits: 3</b>	<b>Contact Hrs: 6 hrs/week</b>
<b>ISA Marks: 80</b>	<b>ESA Marks: 20</b>	<b>Total Marks: 100</b>
<b>Teaching Hrs: 78</b>	<b>Exam Duration: 3 hrs</b>	
1	<b>Introduction to Problem-Solving</b> Introduction to algorithms/flowcharts and their notations, top-down design, elementary problems.	3 hrs
2	<b>Basics of C programming language</b> Characteristics and uses of C, Structure of C program, C Tokens: Keywords, Identifiers, Variables, Constants, Operators, Data-types, Input and Output statements.	15 hrs
3	<b>Decision control statements</b> Conditional branching statements: if statement, if else statement, else if ladder, switch statement, unconditional branching statements: break, continue. Introduction to Debugging Skills Introduction to Test Driven Programming.	12 hrs
4	<b>Iterative statements</b> while, do while, for, nested statements	10 hrs
5	<b>Functions</b> Introduction, Function declaration, definition, call, return statement, passing parameters to functions, introduction to macros. Introduction to Coding Standards	10 hrs
6	<b>Arrays and Strings</b> Introduction, Declaration, Accessing elements, Storing values in arrays, Operations on one dimensional arrays, Operations on two dimensional arrays, Introduction to Code Optimization and refactoring	15 hrs
7	<b>Pointers</b> Introduction, declaring pointers, pointer variables, pointer expressions and arithmetic, passing arguments to functions using pointers, pointers and arrays, passing an array to a function.	08 hrs
8	<b>Structures and Unions</b> Introduction, passing structures to functions, Array of structures, Unions	05 hrs
<b>Text Books:</b> <ol style="list-style-type: none"> <li>1. R.G.Dromey, How to Solve it by Computer, 1<sup>st</sup> ed., PHI, 2008.</li> <li>2. Yashvant Kanetkar, Let us C, 15<sup>th</sup> ed, BPS Publication, 2016.</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>3. B W Kernighan, D M Ritchie, The Programming Language C, 2<sup>nd</sup> ed., PHI, 2004.</li> <li>4. B S Gottfried, Programming with C, 2<sup>nd</sup> ed., TMH, 2006.</li> <li>5. B.A. Forouzan, R.F. Gilberg, A Structured Program Approach Using C, 3<sup>rd</sup>, CENGAGE Learning, 2008.</li> </ol>		

[Back to Semester - 1](#)

<b>Program: UG</b>		<b>Semester: I</b>
<b>Course Title: Engineering Exploration</b>		<b>Course Code: 15ECRP101</b>
<b>L-T-P: 0-0-3</b>	<b>Credits: 3</b>	<b>Contact Hrs: 6 hrs/week</b>
<b>ISA Marks: 80</b>	<b>ESA Marks: 20</b>	<b>Total Marks: 100</b>
<b>Teaching Hrs: 78</b>	<b>Exam Duration: 3 hrs</b>	
No	Content	Sessions
1	Introduction to Engineering and Engineering Study	1
2	Role of Analysis in Engineering, Analysis Methodology	2
3	Data Analysis Graphing	2
4	Basics of Engineering Design, Multidisciplinary Nature of Engineering Design	5
5	Project Management	1
6	Sustainability in Engineering	2
7	Ethics	1
8	Modelling, Simulation and Data Acquisition using Software Tool	1
9	Platform-based development: Arduino	3
9	Course Project	3
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>1. Engineering Exploration (Edited Book, 2008) by Pearson Publication</li> </ol>		
Evaluation Scheme		
Chapter No	Name	Weightage in percentage
1	Introduction to Engineering and Engineering Study	-
2	Role of Analysis in Engineering	10
3	Analysis Methodology	
4	Data Analysis Graphing	10
5	Basics of Engineering Design	20
	Multidisciplinary Nature of Engineering Design	
6	Project Management	5
7	Sustainability in Engineering	10
8	Ethics	5
9	Modelling, Simulation and Data Acquisition using Software Tool	-
10	Platform Based Development: Arduino	-
10	Course Project	40

<b>Program: UG</b>		<b>Semester: I</b>	
<b>Course Title: Basic Electronics</b>		<b>Course Code: 18EECF102</b>	<b>Teaching Hours</b>
<b>L-T-P: 4-0-0</b>	<b>Credits: 4</b>	<b>Contact Hours: 4Hrs/week</b>	
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>	
<b>Teaching Hours: 50 Hrs.</b>	<b>Examination Duration: 3 Hrs.</b>		
<b>Unit I</b>			<b>03</b>
<b>Chapter 1: Overview of Electronics in Mechanical Engineering</b> Definition & overview of Mechatronics, Mechatronics and Design Innovation, Mechatronics and Manufacturing, Mechatronics and Education; Typical Mechatronics Components; Sensors and Transducers.			<b>10</b>
<b>Chapter 2: Semiconductor Devices and Applications:</b> PN junction diode, characteristics and parameters, diode approximations, half wave rectifier, full wave bridge rectifier, full wave bridge rectifier capacitor filter, Zener diode, Voltage regulator design, BJT, Darlington Pair, JFET, MOSFET, UJT, SCR.			<b>08</b>
<b>Chapter 3: Operational Amplifiers:</b> Ideal op-amp characteristics, op-amp applications: Comparator, Inverting amplifier, Non-inverting amplifier, Voltage follower, Integration, Differentiation, Adder, Subtractor and numerical as applicable.			<b>13</b>
<b>Unit II</b>			<b>06</b>
<b>Chapter 4: Digital Logic:</b> Digital Number system: Binary & Hexadecimal number systems, Conversion, BCD Number system, Gray code, Data word representation, Binary Arithmetic, Boolean Algebra, Logic gates, Combinational & Sequential circuits, Adders, Flip-Flops, Registers, Counters, Multiplexer.			<b>06</b>
<b>Introduction to Digital Electronics (Text-2):</b> Introduction, Switching and Logic Levels using circuits, Digital Waveform (Sections 9.1to 9.3). Number system: Binary, Octal, Decimal and Hexadecimal, Inter Conversion, BCD Number system, Grey code, Data word representation, Binary Arithmetic, Boolean Algebra: Laws, rules & theorems of Boolean algebra, Sum of products form ( SOP ), products of sum form (POS) of Boolean functions. Study of Karnaugh Maps ( K-maps) for 2, 3 & 4 variables only. Logic gates, Adders, Encoder, Decoder, Multiplexer and De- multiplexer. Combinational & Sequential circuits, Latches and Flip-Flops(SR, JK, D, T),			<b>06</b>
<b>Chapter 5: Sensors and Transducers :</b> Introduction, Classification of sensors and transducers, Contact type – Mechanical switches, Non-contact type - proximity sensors & Hall sensors, principle of working of light sensors, Future Challenges			<b>06</b>
<b>Unit – III</b>			<b>04</b>
<b>Chapter 6: Signal Conditioning:</b> Analog & Digital signals, Digital to Analog Conversion, R-2R DAC, Analog to Digital Conversion, SAR ADC, Data Acquisition.			<b>04</b>
<b>Chapter 7: Case Studies of Mechatronic Systems:</b> Automatic Camera, Drilling Machine, Bar code reader.

Program: UG			Semester: I		
Course Title: Basic Mechanical Engineering			Course code: 15EMEF101		
L-T-P: 2-1-0		Credits: 3	Contact Hrs.: 4 hrs/week		
CIE Marks: 50		SEE Marks: 50	Total Marks: 100		
Teaching Hrs: 50			Exam Duration: 3 hrs		
Chapter	Contents	Hours	Tutorial	Sessions	
Unit I					
1	Introduction to Mechanical Engineering: Definition of engineering, Mechanical Engineering, Branches of Mechanical Engineering, Who are Mechanical Engineers?, Mechanical Engineers' top ten achievements.	2	Visit to Workshop and Machine Shop, Tools, Safety Precautions Video presentations	1	
2	Manufacturing Engineering: Basics of Manufacturing What is manufacturing?, The main manufacturing sectors, The importance of the main manufacturing sectors to the Indian economy, Scales of production, Classification of manufacturing Processes. Advances in Manufacturing: CNC machines, Mechatronics and applications	8	Demonstration on the working of Lathe, milling, drilling, grinding machines. Demonstration on Welding (Electric Arc Welding, Gas Welding, Soldering). Demonstration and Exercises on Sheet metal work. Visit to Learning Factory	5	
Unit II					
3	Design Engineering: Power Transmission Elements Overview Design Application: <ul style="list-style-type: none"><li>• Belt Drives. Types, Length of Belt. Velocity Ratio, Initial Tension. Ratio of Tensions. Power Transmitted, Numerical Problems.</li><li>• Gears. Spur Gear, Rack and Pinion, Worm Gear, Bevel Gear, Helical Gears. Speed, Torque, and Power in Gear pair. Simple and Compound Gear trains. Numerical Problems.</li><li>• Ball and Roller Bearings, Types, Applications.</li></ul>	6	Design Problems like a <u>moving experience</u> , aluminium can crusher Video presentations	5	

4	Thermal Engineering 1: Prime Movers. Internal Combustion Engines: Classification, IC engine parts, 2 stroke SI and CI engine, 4 Stroke SI and CI Engine, PV diagrams of Otto and Diesel cycles, Comparison of 2 stroke and 4 stroke engine, comparison of CI and SI engine, Problems on Engine Performance, Future trends in IC engines.	4	Case study on power requirement of a bike, car or any machine Video presentations	1
<b>UNIT III</b>				
5	Thermal Engineering 2: Thermal Systems' Applications Refrigeration system, Air conditioning system, Pumps, Blowers and Compressors, Turbines, and their working principle and specifications.	5	Case study on selection of various thermal systems Video presentations	1

2. Raymond Murphy - Intermediate English Grammar, Cambridge University Press		
3. Martin Hewings- Advanced English Grammar, Cambridge University Press.		

### Curriculum Content - Course wise (Semester – 2)

<b>Program: UG</b>		<b>Semester: II</b>
<b>Course Title: Multivariable calculus</b>		<b>Course Code: 18EMAB102</b>
<b>L-T-P: 4-1-0</b>	<b>Credits: 05</b>	<b>Contact Hours: 6 hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 50</b>	<b>Examination Duration: 3hrs.</b>	
<b>Unit I</b>		
<b>Chapter 1. Partial differentiation</b> Function of several variables, Partial derivatives, Level curves, Chain rule, Errors and Approximations. Extreme value problems. Lagrange's multipliers.		
		12 Hrs
<b>Chapter 2. Double integrals</b> Double integrals- Rectangular and polar coordinates, Change the order of integration. Change of variables, Jacobian. Application of double integrals MATLAB: optimization problems, application of double integrals.		
		8 Hrs
<b>Unit II</b>		
<b>Chapter 3. Triple integrals</b> Triple integrals, Cartesian, change to Cylindrical and Spherical coordinates Application of Triple integrals.		
		7 Hrs
<b>Chapter 4. Calculus of Vector Fields</b> Vector fields, Gradient and directional derivatives. Line and Surface integrals. Independence of path and potential functions. Green's theorem, Divergence of vector field, Divergence theorem, Curl of vector field. Stokes theorem. MATLAB: application of Triple integrals, Vector calculus problems		
		13 Hrs
<b>Unit III</b>		
<b>Chapter 5. Differential equations of higher orders</b> Linear differential equations of second and higher order with constant coefficients. The method of Variation of parameters. Initial and boundary value problems. Applications of second order differential equations-Newton's 2 <sup>nd</sup> law, electrical circuits, Simple Harmonic motion. Series solution of differential equations. Validity of Series solution of Differential equations. MATLAB: application of differential equations		
		(5+5) Hrs
<b>Text Books:</b> 1. Early Transcendental Calculus- James Stewart, Thomson Books, 7ed 2010		
<b>Reference Books:</b> 1. Calculus Single and Multivariable, Hughes-Hallett Gleason, Wiley India Ed, 4ed, 2009. 2. Thomas Calculus, George B Thomas, Pearson India, 12ed, 2010		

<b>Program: UG</b>		<b>Semester: II</b>
<b>Course Title: Engineering Physics</b>		<b>Course Code: 15EPHB102</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3 hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs.</b>	
<b>Unit I</b>		
Chapter 1	<b>Concept of Motion - Kinematics in One Dimension</b> Introduction, Motion Diagrams, The Particle Model, Position Model, Linear Velocity and Acceleration, Uniform Motion, Instantaneous Velocity, Finding Position from Velocity, Motion with Constant Acceleration, Free Fall Motion on an Inclined Plane, Instantaneous Acceleration, Numericals.	6 Hrs
Chapter 2	<b>Kinematics in Two Dimensions</b> Introduction to Vectors, Properties of vectors, Coordinate Systems and Vector Components, Vector Algebra. Position, velocity and Acceleration vectors, Projectile Motion, Relative Motion, Uniform Circular Motion, Velocity and Acceleration in Uniform Circular Motion, Nonuniform Circular Motion and Angular Acceleration, Numericals.	6 Hrs
Chapter 3	<b>Force and Motion</b> Concept of Force, Identifying Forces, A Virtual Experiment, Newton's First Law, Newton's Second Law, Free-Body Diagrams, Applications.	4 Hrs
<b>Unit II</b>		
<b>Chapter 4</b>	<b>Dynamics I</b> Equilibrium using Newton's second Law, Friction, Drag, Newton's Third Law, Analyzing Interacting Objects, Newton's Third Law, Applications.	5 Hrs
<b>Chapter 5</b>	<b>Dynamics II</b> Motion in a plane, Dynamics in Two Dimension, Velocity and Acceleration in Uniform Circular Motion, Dynamics of Uniform Circular Motion, Fictitious Forces, Non-uniform Circular Motion, Numerical.	6 Hrs
<b>Chapter 6</b>	<b>Impulse and Momentum</b> Momentum and Impulse, Problems, Conservation of Momentum, Inelastic Collisions, Explosion, Momentum in Two Dimension, Numericals.	5 Hrs
<b>UNIT III</b>		
<b>Chapter 7</b>	<b>Energy and Work</b> Energy: Kinetic Energy and Gravitational Potential Energy, Restoring Forces, Hooke's Law, Elastic Potential Energy, Elastic Collisions, Energy Diagrams, Work: Work and Kinetic Energy, Force, Work and Potential energy, Conservation of Energy, Power, Numericals.	8 Hrs
<b>Text Book:</b> 1. John W Jewett and Raymond A Serway, Physics for Scientists and Engineers with Modern Physics, Cengage publication, India Edition, 8 <sup>th</sup> Edition.		
<b>Reference:</b> 1. Randall D Knight, Physics for Scientists and Engineers, Pearson publication, 2 <sup>nd</sup> Edition. 2. Hans C Ohanian and John T Markert, Physics for Engineers and Scientists, W W Norton and Company, Volume 1, 3 <sup>rd</sup> Edition

<b>L-T-P: 4-0-0</b>	<b>Credits: 4</b>	<b>Contact Hours: 3 hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs.</b>	
<b>Unit I</b>		
No	Content	Hrs.
1	<b>Chapter 1: Overview of Civil Engineering</b> Evolution of Civil Engineering Specialisation, scope and role. Impact of Civil Engineering on National economy, environment and social & cultural fabric. Challenges and Opportunities for Civil Engineers Civil Engineering Marvels, Future challenges, Higher education and Research.	04
2	<b>Chapter 2: Coplanar concurrent force system</b> Introduction to Engineering Mechanics: Basic idealizations – Particle, Continuum, Body, Rigid body, Deformable body, Definition of force and its elements; Laws of Mechanics – Parallelogram law of forces, Principle of transmissibility, Law of Superposition, Newton’s laws of motion. Classification of force systems <div style="text-align: right;">3 hrs.</div> Resultant of coplanar concurrent force system: Definitions – Resultant, composition & Resolution of a force, Equilibrium, Equilibrant, Formulae for resultant of forces and resolution of a force. Numerical problems on resultant of forces. <div style="text-align: right;">4 hrs.</div> Equilibrium of coplanar concurrent force system: Conditions of equilibrium, Action & Reaction, Free body diagram, Lamis’ theorem. Numerical problems on equilibrium of forces. <div style="text-align: right;">5 hrs.</div>	12
3	<b>Chapter 3: Coplanar non-concurrent force system</b> Resultant of a force system: Moment, moment of a force, couple, moment of a couple, Characteristics of couple, Equivalent force-couple system, Numerical problems on moment of forces and couples, on equivalent force-couple system. Varignons principle of moments, Resultant of coplanar-non-concurrent force systems and numerical problems. <div style="text-align: right;">5 hrs.</div>	05
<b>Unit II</b>		
4	<b>Chapter 4: Equilibrium of a force system</b> Conditions of equilibrium, types of support and loading for a statically determinate beam, Reactions at support connections, Numerical problems on equilibrium of force systems and support reactions for a statically determinate beam. <div style="text-align: right;">5 hrs.</div>	18

5	<b>Chapter 5: Static Friction</b> Introduction, types of friction, definition, limiting friction, coefficient of friction, laws of Coulomb friction, angle of friction, angle of repose, and cone of friction. Wedge and belt friction theory. Derivation of the belt friction formula. Numerical problems on impending motion on horizontal and inclined planes (including connected bodies); wedge friction; Ladder friction, and Belt friction. 8 hrs.	
6	<b>Chapter 6: Centroid of Plane Figures</b> Introduction, Definition, Methods of determining the centroid, axis of reference, axis of symmetry, Locating the centroid of simple plane figures (triangle, semicircle, quarter of a circle and sector of a circle etc.,) using the method of integration, Numerical problems on Centroid of simple built up sections. 5 hrs.	
<b>Unit – III</b>		
7	<b>Chapter 7: Second moment of area (Plane figures)</b> Introduction, Definition, Method of determining the second moment of area, Section Modulus, Radius of gyration, perpendicular and Parallel axis theorems, Polar second moment of area, second moment of area of simple plane figures (triangle, rectangle, semicircle, circle etc.,) using method of integration, Numerical problems on MI of simple built up sections. 5 hrs.	11
8	<b>Chapter 8: Kinetics of a particle- Work, Power, Energy</b> Introduction – Kinematics and Kinetics, Definitions – work, power and energy. Work done by a force (constant, gravitational and spring forces) in rectilinear motion. Numerical problems, Kinetic energy of a particle, principle of work and energy. 6 hrs.

<b>Teaching Hours: 50</b>	<b>Examination Duration: 3 Hrs.</b>	
Sl. No	Content	No. of Sessions
01	<b>Chapter 1: Introduction to engineering drawing and orthographic projections.( Manual Drafting )</b>  i) Introduction to engineering drawing – BIS conventions. ii) Orthographic projections: first angle projection and third angle projection – symbolic representation. iii) Projections of points. iv) Projections of lines inclined to both the planes and determination of true length by rotating the view method (Problems on traces of a line and mid-point problems are not included). However application problems are included. v) Projection of planes: Planes parallel to one plane and perpendicular to other plane or perpendicular to one plane and inclined to other plane (Two stage problems). vi) Projection of simple solids such as prisms, pyramids, cylinders, cones and sphere and their frustums in simple positions (Base parallel to or in one of the three planes).	08
02	<b>Chapter 2: Development of lateral surfaces of solids. (MANUAL)</b> i) Development of lateral surface of prisms and cylinders (Either full or truncated using parallel line development method) ii) Development of lateral surface of pyramids and cones (Either full or truncated or of their frustums using radial line development method) iii) Development of lateral surfaces of spheres using both methods and development of transition pieces.	07
03	<b>Chapter 3: Conversion of pictorial views into orthographic projections using CAD software.</b> Drawing orthographic projections of objects shown in pictorial views by the first angle method of projection using CAD software. (2D drafting only)	06
04	<b>Chapter 4: Isometric projection or view using CAD software.</b> Drawing isometric projections or views of objects shown in orthographic projections using CAD software.	04
<b>Text Books:</b> <ol style="list-style-type: none"> <li>1. Text Book of Engineering Drawing by K R Gopalakrishna</li> <li>2. Text Book of Engineering Drawing by N D Bhatt and V M Panchal</li> </ol>		

Program: UG		Semester: II	
Course Code: 18EEEF102		Course Title: Basic Electrical Engineering	
L-T-P: 3-0-0		Credits: 3	Contact Hrs.: 3 hrs/week
CIA Marks: 50		ESA Marks: 50	Total Marks: 100
Teaching:40 Hrs..		Exam Duration: 3 Hrs..	
Chapter No.	Unit-I	Hrs..	
1	<b>Overview of Electrical Engineering</b> Specialisation, scope & role, impact of Electrical Engineering on national economy, environment, Sources of generation, sustainability, challenges and opportunities for electrical engineers, electrical engineering marvels, future challenges.	02	
2	<b>DC Circuits</b> Voltage and current sources, Kirchoff’s current and voltage laws, loop and nodal analysis of simple circuits with DC excitation. Time-domain analysis of first-order RLand RC circuits.	05	
3	<b>AC Circuits</b> Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysisof single-phase series and parallel R-L-C ac circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections. power measurement using two-watt meters	08	
	Unit-II		
4	<b>Electrical Actuators</b> Electromagnetic principles, Solenoid, Relays, classification of Electric motors, DC motors-shunt, series, compound, separately excited, PMDC motors – Speed Control, Stepper Motors, BLDC motors, three phase induction motor, Characteristics and applications, selection of motors for various applications.	9	
5	<b>Power Electronics (Text1, chapter 45)</b> Introductory, Thyristor, Some thyristor circuits, Limitations to thyristor operation, The thyristor in practice, The fully controlled AC/DC converter, AC/DC inversion, Switching devices in inverters, Three-phase rectifier networks, The three-phase fully controlled converter, Inverter-fed induction motors, Soft-starting induction motors, DC to DC conversion switched-mode power	6	
	Unit-III		
6	<b>Electrical Wiring, Safety and protection(ref :Text3-page 1 to 10)</b> Types of wires and cables for internal wiring, Types of switches and Circuits, Types of wiring, Safety precautions and rules in handling electrical appliances, Electric shock, first aid for electrical shocks, Importance of grounding and earthing, Methods for earthing, Fuses, MCB, ELCB and Relays, Lockout and Tag out, Electrical Codes and Standards.	05	
7	<b>Batteries:</b> Basics of lead acid batteries, Lithium Ion Battery, Battery storage capacity, Coulomb efficiency, Numerical of high and low charging rates, Battery sizing. Numericals..	05	
Text Books:

<b>Program: UG</b>		<b>Semester: II</b>
<b>Course Code: 16EPHP102</b>	<b>Course Title: Engineering Physics Lab.</b>	
<b>L-T-P-SS:0-0-1</b>	<b>Credits : 1</b>	<b>Contact Hrs.: 02 Hrs./Week</b>
<b>ISA Marks: 80</b>	<b>ESA Marks: 20</b>	<b>Total Marks: 100</b>
<b>Teaching Hrs.: 24 Hrs.</b>		<b>Examination Duration: 3 Hrs.</b>
Experiments		
1.	Experimental Data Error Analysis	
2.	Coefficient of Friction	
3.	Centripetal Force	
4.	Young's Modulus by Searle's method	
5.	The Law of Forces by three wire suspension table	
6.	Force Table and Vector addition of forces	
7.	Moment of inertia and rotational motion	
8.	Projectile motion	
9.	Variable g pendulum	
10.	Study of one dimension motion by linear air track	

### Curriculum Content - Course wise (Semester – 3)

<b>Program: Bachelor of Engineering</b>		<b>Semester: III</b>
<b>Course Title: Calculus and Integral Transforms</b>		<b>Course Code:15EMAB231</b>
<b>L-T-P: 4-0-0</b>	<b>Credits:04</b>	<b>Contact Hours: 4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration: 3hrs</b>	
<b>Unit I</b>		
<b>1. Differential Calculus</b> Differentiation of standard functions of first and higher orders, Taylor's and Maclaurin's series expansion of simple functions for a single variable.		
<b>2. Integral Calculus</b> Evaluation of integrals, properties, Beta and Gamma functions, relation between Beta and Gamma functions simple problems, Approximate integration- Trapezoidal rule, Simpson's 1/3 rule		
<b>3. Fourier Series</b> Fourier series, Evaluation of Fourier coefficients, Waveform symmetries as related to Fourier coefficient, Exponential form of the Fourier series, half range Fourier series. Practical Harmonic Analysis.		
<b>Unit II</b>		
<b>4. Fourier Transform</b> Exponential Representation of non-periodic signals, Existence of Fourier transforms, properties of Fourier Transform: symmetry, scaling, shifting, Fourier transform of Sine and Cosine, Convolution theorem.		
<b>5. Laplace Transforms</b> Definition, transforms of elementary functions- transforms of derivatives and integrals- Properties. Periodic functions, Unit step functions and Unit impulse functions. Inverse Transforms- properties- Initial and final value theorems and examples; Convolution Theorem. Applications to differential equations.		
<b>Unit III</b>		
<b>6. Ordinary differential equations of first order</b> Introduction, order and degree of equation, Solution of first order first-degree differential equations –variable separable methods, Linear differential equations, Bernoulli's equations, Initial value problems.		
<b>7. Complex analysis</b> Function of complex variables. Limits, continuity and differentiability. Analytic functions, C-R equations in Cartesian and polar forms, construction of Analytic functions (Cartesian and polar forms).		
<b>Text Books</b> <ol style="list-style-type: none"> <li>Grewal B S, Higher Engineering Mathematics, 38<sup>th</sup> ed., Khanna Publication, New Delhi, 2001</li> <li>Bali and Iyengar, A text book of Engineering Mathematics, 6<sup>th</sup> ed., Laxmi Publications(p) Ltd, New Delhi, 2003</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>Calculus- James Stewart, Early Transcendentals Thomson Books, 5e, 2007</li> </ol>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: III</b>
<b>Course Title: Statistics and Integral Transforms</b>		<b>Course Code:15EMAB201</b>
<b>L-T-P:4-0-0</b>	<b>Credits:04</b>	<b>Contact Hours: 4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3hrs</b>	
<b>Unit I</b>		
<b>1. Curve fitting and regression</b> Introduction to the method of least squares, fitting of curves $y = a + bx$ , $y = ab^x$ , $y = a + bx + cx^2$ , correlation and regression. Applications to civil Engineering problems.		
<b>2. Probability</b> Definition of probability, addition rule, conditional probability, multiplication rule, Bayes' rule. (no proof) Discrete and continuous random variables- PDF-CDF- Binomial, Poisson and Normal distributions (Problems only).		
<b>3. Tests of hypothesis 1</b> Sampling, Sampling distribution, Standard error, Null and alternate hypotheses, Type I and Type II errors, Level of significance. Confidence limits, testing of hypotheses for single mean and difference of means (large samples). Applications to civil Engineering problems		
<b>Unit II</b>		
<b>4. Tests of hypothesis-2</b> T-test (test for single mean, paired t-test), Chi Squared distribution, analysis of variance (one-way and two-way classifications). Case studies of designs of experiments (CRD, RBD). Applications to civil Engineering problems.		
<b>5. Laplace Transforms</b> Definition, transforms of elementary functions- transforms of derivatives and integrals- Properties. Periodic functions, Unit step functions and Unit impulse functions. Inverse Transforms- properties- Initial and Final value theorems, examples, Convolution Theorem. Applications to differential equations.		
<b>Unit III</b>		
<b>6. Fourier Series</b> Fourier series representation of a function, even and odd functions, half-range series, and Practical Harmonic Analysis.		
<b>7. Fourier Transform</b> Exponential Representation of non-periodic functions, Existence of Fourier transforms, properties of Fourier Transform: Fourier Sine and Cosine transforms.		
<b>Text Books</b> 1. Gupta S C and Kapoor V K, Fundamentals of Mathematical Statistics, 9 <sup>th</sup> ed., Sultan Chand & Sons, New Delhi, 2002 2. J. Susan Milton, Jesse C. Arnold, Introduction to Probability and Statistics: Principles and Applications for Engineering and the Computing Sciences, 4 <sup>th</sup> Ed, TATA McGraw-Hill Edition 2007. 3. Kreyszig, E, Advanced Engineering Mathematics, 8 <sup>th</sup> ed., John Wiley & sons, 2003.		
<b>Reference Books:</b> 1. Kishor S Trivedi, probability and statistics with reliability queuing and computer science applications, PHI, 2000. 2. Miller, Freud and Johnson, Probability and Statistics for Engineering, 5 <sup>th</sup> ed., PHI publications, 2000 3. Potter M C, Jack Goldberg and Aboufadel E F, Advanced Engineering Mathematics, 3 <sup>rd</sup> ed. Oxford Indian.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: III</b>
<b>Course Title: Momentum Transfer</b>		<b>Course Code: 22ECEC201</b>
<b>L-T-P:4-0-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3 hrs</b>	
<b>Unit - 1</b>		
<b>Chapter 1. Fluid Statics, Its Applications</b> Fluid Flow Phenomena Concept of unit operations, Concept of momentum transfer, Nature of fluids and pressure concept, variation of pressure with height – hydrostatic equilibrium, Barometric equation, Measurement of fluid pressure – manometers, Continuous gravity decanter, Centrifugal decanter. Type of fluids – shear stress and velocity gradient relation, Newtonian and non-Newtonian fluids, Viscosity of gases and liquids. Types of flow – laminar and turbulent flow, Flow in boundary layers, Reynolds number, and Boundary layer separation and wake formation.		
		<b>10 Hours</b>
<b>Chapter 2. Basic Equations of Fluid Flow and Dimensional Analysis</b> Average velocity, Mass velocity, Continuity equation, Euler and Bernoulli equations Modified equations for real fluids with correction factors, Pump work in Bernoulli equation, Angular momentum equation. Dimensional homogeneity, Rayleigh's, and Buckingham $\Pi$ - methods, Significance of different dimensionless numbers, Elementary treatment of similitude between model and prototype.		
		<b>10 Hours</b>
<b>Unit - 2</b>		
<b>Chapter 3. Flow of Incompressible Fluids in Conduits</b> Laminar flow through circular and non-circular conduits, Hagen Poiseuille equation. Friction factor chart, friction from changes in velocity or direction, Form friction losses in Bernoulli equation.		
		<b>8 Hours</b>
<b>Chapter 4. Flow of Compressible Fluids</b> Continuity equation, Concept of Mach number, Total energy balance, Velocity of sound, Ideal gas equations, Flow through variable-area conduits, Adiabatic frictional flow, Isothermal frictional flow (elementary treatment only).		
		<b>12 Hours</b>
<b>Unit - 3</b>		
<b>Chapter 5. Transportation and Metering of Fluids</b> Pipes, Fittings and valves, Measurement of fluid and gas flow rates by venturi meter, orifice meter, rotameter and pitot tube, Elementary concept of target meter, vortex-shedding meters, turbine meters, positive displacement meters, magnetic meters, Coriolis meters and thermal meters, Flow through open channel-weirs and notches.		
		<b>6 Hours</b>
<b>Chapter 6. Pumps</b> Performance and Characteristics of pumps positive displacement and centrifugal pumps, Fans, compressors, and blowers.		
		<b>4 Hours</b>
<b>Textbooks</b> <ol style="list-style-type: none"> <li>1. Warren McCabe, Julian Smith, Peter Harriott, Unit Operations of Chemical Engineering, 7th Edition, McGraw Hill Education, 2017.</li> <li>2. Kumar K.L. Engineering Fluid Mechanics, S Chand &amp; Co Ltd., 2008</li> <li>3. Bansal R.K. A Textbook of Fluid Mechanics, Laxmi Publications Pvt Limited, 2005</li> </ol>

<b>Program: Bachelor of Engineering</b>		<b>Semester: III</b>
<b>Course Title: Particulate Technology</b>		<b>Course Code: 22ECEC202</b>
<b>L-T-P:4-0-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3 hrs</b>	
<b>Unit - 1</b>		
<b>Chapter 1. Particle Size Analysis</b> Particle shape, particle size, different ways of expression of particle size, shape factor, sphericity, particle size analysis, screens – ideal and actual screens, Differential and cumulative size analysis, the effectiveness of screen, Specific surface of a mixture of particles, number of particles in a mixture, standard screens, Sub - Sieve analysis: BET analysis, Acoustic spectroscopy and Flow cytometry. Industrial screening equipment, motion of screen, Grizzly, Vibrating screen, Trommels.		
		<b>10 Hours</b>
<b>Chapter 2. Size Reduction</b> Introduction – types of forces used for comminution, Criteria for comminution, Characteristics of comminuted products, Laws of size reduction, Work Index, Energy utilization, methods of operating crushers – Free crushing, choke feeding, open circuit grinding, Closed circuit grinding, wet and dry grinding, equipment for size reduction – Classification of size reduction equipment, equipment – jaw crusher, impactor, Ball mill, Critical speed of ball mill, Knife cutter. Simulation of comminution processes. Selection of construction materials for face plates of jaw crushers and grinding media.		
		<b>10 Hours</b>
<b>Unit - 2</b>		
<b>Chapter 3. The flow of fluid past immersed bodies</b> Drag, Drag coefficient, Pressure drop – Kozeny-Carman equation, Blake-Plummer, Ergun equation, Fluidisation, conditions for fluidisation, Minimum fluidisation velocity, Pneumatic conveying. Case study: Fluidised bed combustor in cogeneration unit.		
		<b>5 Hours</b>
<b>Chapter 4. Motion of particles through fluids</b> Mechanics of particle motion, an equation for one-dimensional motion of particles through a fluid in the gravitational and centrifugal field, Terminal velocity, drag coefficient, the motion of spherical particles in Stoke's region, Newton's region, and Intermediate region, criterion for settling regime, Hindered settling, modification of equation for hindered settling, Centrifugal separators, Cyclones and Hydro cyclones. Case Studies: Motion of coal particles in a fluidised bed combustor, Calculation of the efficiency of a cyclone separator.		
		<b>5 Hours</b>
<b>Chapter 5. Sedimentation</b> Batch settling test, Coe and Clevenger theory, Kynch theory, design of a continuous thickener.		
		<b>5 Hours</b>
<b>Chapter 6. Filtration</b> Introduction, Classification of filtration, Cake filtration, Clarification, batch and continuous filtration, Pressure and vacuum filtration, Constant rate filtration and cake filtration, Characteristics of filter media, Filter aids, Application of filter aids, Industrial filters, Plate and frame filter press, Leaf filter, Rotary drum filter, Suspended batch centrifuge, Principles of cake filtration.		
		<b>5 Hours</b>
<b>Unit - 3</b>		
<b>Chapter 7. Agitation and Mixing</b> Application of agitation, Agitation equipment, Types of impellers – Propellers, Paddles and Turbines, Flow patterns in agitated vessels, Prevention of swirling, Standard turbine design, Power correlation and power calculation, Mixing of solids, Types of mixers – Muller mixers, Mixing index, Ribbon blender, Internal screw mixer. Case Study: Dispersing of paints and mixing of powders in pharmaceutical industries.		
		<b>5 Hours</b>
<b>Chapter 8. Sampling, Storage &amp; Conveying of Solids and Miscellaneous Separation</b> Sampling of solids, Storage of solids, Open and closed storage, Bulk and bin storage, Conveyors – Belt, conveyors, Bucket conveyor, and Screw conveyor. Magnetic separation, Electrostatic separation, Jigging, Heavy media separation, Froth flotation process.		
		<b>5 Hours</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: III</b>
<b>Course Title: Material and Energy Balance Calculations</b>		<b>Course Code: 22ECEC203</b>
<b>L-T-P:4-0-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3 hrs</b>	
<b>Unit - 1</b>		
<b>Chapter 1. Basic Chemical Calculations:</b> Fundamental and derived units, Conversion, Dimensional consistency of equations, Dimensionless groups and constants, conversions of equations. Mole, Mole fraction, Weight fraction, Volume fraction, Molarity, Molality, ppm, Ideal gas law calculations, Partial pressure, Concept of vapour pressure.		
		<b>10 Hours</b>
<b>Chapter 2. Material Balance Without Reaction:</b> General material balance equation for steady and unsteady state, Steady and unsteady process, Tie element, batch and continuous operation, Typical steady-state material balances in distillation, absorption, Liquid-liquid extraction, Leaching.		
		<b>10 Hours</b>
<b>Unit - 2</b>		
<b>Chapter 3. Multistream Material Balance (Bypass, Purge, and Recycle):</b> Drying, mixing, evaporation, and Elementary treatment of material balances involving bypass, recycling and purging. Problems.		
		<b>10 Hours</b>
<b>Chapter 4. Steady State Material Balance with Reaction:</b> Principles of Stoichiometry, Stoichiometry coefficient, Concept of limiting, excess reactants, fractional and percentage conversion, fractional yield and percentage yield, selectivity, related problems, Calculations involving burning of solid, liquid and gaseous fuels, excess air, air-fuel ratio calculations.		
		<b>10 Hours</b>
<b>Unit - 3</b>		
<b>Chapter No.5. Energy Balance:</b> General steady-state energy balance equation, Concept of enthalpy, Heat capacity, Heat of formation, Heat of reaction, Heat of combustion and Calorific values. Heat of solution, Heat of mixing, Heat of crystallisation, determination of $\Delta H^\circ_R$ at standard and elevated temperatures, Theoretical flame temperature, and adiabatic flame temperature.

Course Code: 22EHSC201	Course Title: Corporate Communication	
L-T-P-SS:0-0-0.5	Credits : 0.5	Contact Hrs.: 02 Hrs./Week
ISA Marks: 100	ESA Marks: --	Total Marks: 100
Teaching Hrs.: 16 Hrs.		Examination Duration:
Contents		
1.	<b>Chapter 1. Communication Skills</b> Tools of Communication, Listening, Body Language, Common Postures and Gestures, Open and Closed Body Language, Body Language to be used in Corporate Scenarios, Voice: Pitch, Pace, and Pause, Verbal Language: Positive & Negative Vocabulary, Corporate Conversations.	
2.	<b>Chapter 2. Presentation Skills</b> Zero Presentation, Individual Presentations, and feedback, Making Presentations Interactive, Types of Questions, Taking off and Signing off differently, Captivating your Audience, Corporate Presentations.	
3.	<b>Chapter 3. Spoken English</b> Phonetic and Non-Phonetic Languages, Introduction to IPA, Sounds in English, Syllables, Word Stress, Rhythm, Pausing, and Intonation.	
4.	<b>Chapter 4. Written English</b> Vocabulary Enhancement Strategies, Root Words in English, Grammar Improvement Techniques, Dictionary Usage, Similar and Contradictory Words.

### Curriculum Content - Course wise (Semester – 4)

<b>Program: Bachelor of Engineering</b>		<b>Semester: IV</b>
<b>Course Title: Vector Calculus and Differential Equations</b>		<b>Course Code:15EMAB241</b>
<b>L-T-P:4-0-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3hrs</b>	
<b>Unit I</b>		
<b>Chapter 1. Vector Algebra</b> Vectors, Vector addition, multiplication (Dot and Cross products), Triple products, Vector functions, Vector differentiation, Velocity and Acceleration of a vector point function.		
<b>Chapter 2. Partial differentiation</b> Function of several variables, Partial derivatives, Chain rule, Errors and approximations.		
<b>Chapter 3. Multiple integrals</b> Double integral, Evaluation by change of order, change of variables, simple problems, Triple integrals, simple problems.		
<b>Unit II</b>		
<b>Chapter 4. Vector Calculus</b> Vector fields, Gradient and directional derivatives, Line and Surface integrals. Independence of path and potential functions. Green's theorem, Divergence of vector field, Divergence theorem, Curl of vector field. Stokes theorem.		
<b>Chapter 5. Differential equations of the second order</b> Differential equations of second and higher orders with constant coefficients, the method of variation of parameters.		
<b>Unit III</b>		
<b>Chapter 6. Partial differential equations</b> <ol style="list-style-type: none"> <li>Introduction, classification of PDE, Formation of PDE, Solution of equations of the type <math>Pp + Qq = R</math>, Solution of partial differential equations by direct integration methods, method of separation of variables.</li> <li>Modelling: Vibration of one-dimensional string-wave equation and heat equation. Laplace equation. Solution by the separation of variables method</li> </ol>		
<b>Text Books</b> <ol style="list-style-type: none"> <li>Grewal B S, Higher Engineering Mathematics, 38<sup>th</sup> ed, Khanna Publication, New Delhi, 2001</li> <li>Bali and Iyengar, A text book of Engineering Mathematics, 6<sup>th</sup> ed, Laxmi Publications (P) Ltd, New Delhi, 2003</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>Early Transcendental Calculus- James Stewart, Thomson Books, 5<sup>th</sup> ed, 2007</li> </ol>		

<b>Program: UG</b>		<b>Semester: IV</b>
<b>Course Title: Numerical methods, Linear Algebra and Partial differential equations</b>		<b>Course Code: 22EMAB206</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours: 4hrs/week</b>
<b>ISAMarks:50</b>	<b>ESAMarks:50</b>	<b>TotalMarks:100</b>
<b>TeachingHours:50</b>	<b>ExaminationDuration:3hrs</b>	
<b>Unit I</b>		
<b>Chapter 1 Interpolation techniques</b> Finite differences, Forward, Backward and central difference operators. Newton Gregory forward and backward interpolation formulae. Sterling's and Bessel's formulae for central difference, Lagranges and Newton's divided difference formula for un equal intervals. Gas law problem-using interpolation.		
		<b>8 Hours</b>
<b>Chapter 2 Matrices and System of linear equations</b> Introduction to system of linear equations, Rank of a matrix by elementary row transformations. Consistency of system of linear equations, solution of system by Direct methods-Gauss elimination, Gauss Jordon method . Eigenvalues and Eigenvectors of a matrix. Diagonalization of a matrix.		
		<b>12 Hours</b>
<b>Unit II</b>		
<b>Chapter 3 Numerical solution of linear equations</b> Solution of system of equations by Iterative methods- Gauss-Seidal method. Eigenvalue and the corresponding Eigenvector by power method. Spring mass system Falling parachutist using system of equations.		
		<b>8 Hours</b>
<b>Chapter 4 Partial differential equations</b> Introduction, classification of PDE, Formation of PDE, Solution of equation of the type $Pp+Qq=R$ , Solution of partial differential equation by direct integration methods, method of separation of variables. Modeling: Vibration of one-dimensional string-wave equation and heat equation. Laplace equation. Solution by method of separation of variables.		
		<b>12 Hours</b>
<b>Unit III</b>		
<b>Chapter 5 Finite difference method.</b> (a) Finite difference approximations to derivatives, finite difference solution of parabolic PDE explicit and Crank-Nicholson implicit methods. Engineering Problems: Temperature distribution in a heated plate. (b) Hyperbolic PDE-explicit method, Elliptic PDE-initial-boundary value problems. Vibration of a stretched string, steady-state heat flow.		
		<b>10 Hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Kreyszig, E. (2003). Advanced Engineering Mathematics (8th ed.). John Wiley &amp; Sons.</li> <li>2. <b>Program: UG</b>		<b>Semester: IV</b>
<b>Course Title: Industrial Pollution and Control</b>		<b>Course Code: 22ECEC205</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours: 3 hrs/week</b>
<b>ISAMarks:50</b>	<b>ESAMarks:50</b>	<b>TotalMarks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3hrs</b>	
<b>Unit I</b>		
<b>Chapter 1. Introduction</b> Importance of the environment for mankind. Biosphere and layers of the atmosphere. Hydrological cycle and nutrient cycles. Types of pollution. Damages from environmental pollution. The Need for Environmental Legislation and Environmental Acts in India. Functions of the central and state pollution control boards <div style="text-align: right;"><b>7 Hours</b></div>		
<b>Chapter 2. Sources, Sampling and Analysis of Wastewater</b> Sources, Sampling and Analysis of Wastewater: Water Resources. Origin of wastewater. Evaluation, classification and characterisation of wastewater. Physical and chemical characteristics. BOD, COD and their importance. Types of water pollutants and their effects. <div style="text-align: right;"><b>8 Hours</b></div>		
<b>Unit II</b>		
<b>Chapter 3. Wastewater Treatment</b> Preliminary, primary, secondary and tertiary treatments of wastewater. Sludge Treatment and disposal. Advanced wastewater treatment. Recovery of materials from process effluents <div style="text-align: right;"><b>8 Hours</b></div>		
<b>Chapter 4. Applications to Industries</b> Norms and standards of treated water. Origin, characteristics, and treatment methods in typical industries – petroleum refinery, pulp and paper, distillery, and textile processing. <div style="text-align: right;"><b>7 Hours</b></div>		
<b>Unit III</b>		
<b>Chapter 5 Air Pollution Control</b> Sampling of pollutants. Methods of estimation of air pollutants. Automobile Pollution. Control methods for particulates and gaseous pollutants. Origin, control methods, and equipment used in typical industries, including metallurgical industries, cement industries, and Nuclear Industries (Radioactive Pollution). <div style="text-align: right;"><b>10 Hours</b></div>		
<b>Text Books</b> <ol style="list-style-type: none"> <li>Environmental Pollution Control Engg, C.S. Rao, 2<sup>nd</sup> edn, New Age International Reprint, 2002.</li> <li>Pollution Control in Process Industries, S.P. Mahajan, Tata McGraw-Hill, 22nd Reprint, 1999</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>Principles and Practices of Air Pollution Control and Analysis, J.R. Mudakvi, I.K. International Publishing, Home Pvt. Ltd., New Delhi, 2010.</li> <li>Air Pollution, H.C. Perkins, McGraw-Hill, 1974.</li> <li>Industrial Pollution Control Handbook, Lund, H.F., 6<sup>th</sup> edn, Vol.1, McGraw-Hill, 1971</li> </ol>		

<b>Program: UG</b>		<b>Semester: IV</b>
<b>Course Title: Process Heat Transfer</b>		<b>Course Code: 22ECEC206</b>
<b>L-T-P:4-0-0</b>	<b>Credits:3</b>	<b>Contact Hours: 5hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration: 03</b>	
<b>Unit I</b>		
<b>Chapter 1. Conduction &amp; Extended Surfaces</b> Modes of heat transfer, Fourier’s law, Steady state unidirectional heat flow through single and multiphase layers slabs, cylinders, and spheres for constant and variable thermal conductivity—properties of insulation materials, Types of insulation, Critical and Optimum thickness. Fins – Types of fins, Derivation of fin efficiency for longitudinal fins, Fin effectiveness, and Elementary treatment of unsteady state heat conduction.		
		<b>10 Hours</b>
<b>Chapter 2. Convection &amp; Heat Transfer with Phase Change</b> Individual and overall heat transfer coefficient, LMTD, LMTD correction factor, Dimensionless numbers, and Dimensional analysis, Empirical correlation for forced and natural convection. The analogy between momentum and heat transfer- Reynolds, Colburn and Prandtl analogies. Boiling phenomena: Nucleate and Film boiling, Condensation - Film and Dropwise condensation.		
		<b>10 Hours</b>
<b>Unit II</b>		
<b>Chapter 3. Heat Transfer Equipment</b> Double pipe heat exchangers, Shell & tube heat exchangers – Types of shell & tube heat exchangers, Construction details, Condenser, types of condensers.		
		<b>8 Hours</b>
<b>Chapter 4. Design of Heat Transfer Equipment</b> Elementary design of double pipe heat exchangers, shell and tube heat exchangers, and condensers. Numerical Problems.		
		<b>12 Hours</b>
<b>Unit III</b>		
<b>Chapter 5. Evaporators &amp; Radiation</b> Types of evaporators, the performance of tubular evaporators – Evaporator capacity, Evaporator economy, Multiple effect evaporators – Methods of feeding, the effect of liquid head and boiling point elevation. Properties and definitions, Absorptivity, Reflectivity, Emissive power and intensity of radiation, Black body radiation, gray body radiation, Stefan–Boltzmann law, Wein’s displacement law, Kirchhoff’s law.		
		<b>10 Hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Kern D.Q., “Process Heat Transfer”, McGraw-Hill., New York, 2001</li> <li>2. Warren McCabe, Julian Smith, Peter Harriott, Unit Operations of Chemical Engineering, 7th Edition, McGraw-Hill Education, 2017.</li> <li>3. Dutta, Binay K., “Heat Transfer: Principles and Applications”, PHI Learning. 2000</li> <li>4. Rao Y.V.C., “Heat Transfer”, 1st ed. Universities Press (India) Ltd., New Delhi, 2001</li> </ol>		
<b>Reference Books:</b> Coulson J.M. and Richardson J.F. with Backhurst J.R. and Marker J.H., Coulson J.M. Chemical Engineering, Vol. 1, 6 <sup>th</sup> Edition, Butterworth-Heinemann New Delhi, 1999		

<b>Program: UG</b>		<b>Semester: IV</b>
<b>Course Title: Chemical Engineering Thermodynamics</b>		<b>Course Code: 22ECEC207</b>
<b>L-T-P: 4-0-0</b>	<b>Credits: 4</b>	<b>Contact Hours: 4hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks:50</b>	<b>TotalMarks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3hrs.</b>	
<b>Unit I</b>		
<p><b>Chapter 1. Basic Concepts</b> Scope of thermodynamics, System, Surroundings and processes, Closed and Open systems, state and Properties, Intensive and Extensive Properties, State and Path functions, equilibrium state and Phase rule, Zeroth law of thermodynamics, Heat reservoir and Heat engines, Reversible and Irreversible processes. <b>First Law of Thermodynamics:</b> Internal energy, General statement of First law of thermodynamics, First law of thermodynamics for cyclic process, non-flow processes and steady state flow process, Heat capacity. <b>10 Hours</b></p> <p><b>Chapter 2. PVT Behaviour</b> P-V-T behaviour of pure fluids, Equations of state and ideal gas law, Processes involving ideal gas law, constant volume, constant pressure, constant temperature, adiabatic and polytropic processes, Processes involving ideal gas law: Constant volume, constant pressure, constant temperature, adiabatic and polytropic processes. Equation of state for real gases, van der Waals equation, Redlich–Kwong equation, Peng–Robinson equation, Virial equation. Numerical. Compressibility charts: Principles of corresponding states. <b>10 Hours</b></p>		
<b>Unit II</b>		
<p><b>Chapter 3. Second Law of Thermodynamics</b> General statements of the Second Law. Concept of Entropy and numerical analysis of Entropy. The Carnot Principle: Calculation of Entropy Changes and Clausius Inequality. <b>06 Hours</b></p> <p><b>Chapter 4. Thermodynamic Properties of Pure Fluids</b> Properties, Energy Properties, Derived Properties, Work function, Gibbs free energy, Fundamental property relations, Maxwell's equations, Clapeyron equations, Numerical based on Clapeyron equation, Entropy heat capacity relations, Relationships between CP&amp;Cv, Gibbs Helmholtz equation, Fugacity, Fugacity coefficient, Effect of temperature and pressure on Fugacity, Activity, Effect of temperature and pressure on activity. <b>08 Hours</b></p> <p><b>Chapter 5 Properties of Solutions</b> Partial molar properties, Chemical potential, Effect of temperature and pressure on chemical potential, Fugacity in solutions, Henry's law and dilute solutions, Lewis Randall rule, Raoult's law, Activity in solutions, Activity coefficients, Gibbs–Duhem's equation. <b>06 Hours</b></p>		
<b>Unit III</b>		
<p><b>Chapter 6 Phase equilibria</b> Criteria of phase equilibria, Criterion of stability, Vapour–Liquid Equilibria, VLE in ideal solutions, Non-Ideal solutions, Boiling point diagram. <b>04 Hours</b></p> <p><b>Chapter 7 Chemical Reaction Equilibrium</b> Reaction Stoichiometry, Criteria of chemical reaction equilibrium, Equilibrium constant and standard free energy change, Effect of temperature, Pressure on equilibrium constants and other factors affecting equilibrium conversion. <b>06 Hours</b></p>		
<p><b>Text Books</b></p> <ol style="list-style-type: none"> <li>1. Smith J.M. and Vanness H. C., "Introduction to Chemical Engineering Thermodynamics", 8<sup>th</sup> ed., McGraw-Hill, New York.</li> <li>2. Narayanan K.V., "Textbook of Chemical Engineering Thermodynamics", Prentice Hall of India Private Limited, New Delhi, 2013</li> </ol>		

<b>Program: U G</b>		<b>Semester: IV</b>
<b>Course Title: Material Science and Engineering</b>		<b>Course Code: 22ECEC208</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3hrs</b>	
<b>Unit I</b>		
<b>Chapter 1 Introduction</b> Introduction to material science, Classification of engineering materials, Properties of materials and Level of structure. Atomic structure and atomic bonding.		
		<b>5 Hours</b>
<b>Chapter 2: Crystal geometry and structure determination</b> The geometry of crystals – the Bravais lattices, Crystal directions and planes – the Miller indices, Structure determination by X-Ray diffraction – Bragg law and Powder method.		
		<b>5 Hours</b>
<b>Chapter 3 Crystal imperfections</b> Point Imperfections, Line imperfections – edge and screw dislocations, the Burgers vector, Surface imperfections and Volume imperfections		
		<b>5 Hours</b>
<b>Unit II</b>		
<b>Chapter 4 Phase diagram and phase transformations</b> Phase rule, Single component systems, Binary phase diagrams, Lever rule, Typical phase diagrams for Magnesia-Alumina, Copper–Zinc, iron–carbon systems, Nucleation and growth, Solidification, and Allotropic transformation.		
		<b>6 Hours</b>
<b>Chapter 5 Deformation of materials and fracture</b> Elastic deformation, Plastic deformation, Creep, Visco-elastic deformation, and Different types of fracture.		
		<b>4 Hours</b>
<b>Chapter 6 Heat treatments</b> Annealing, normalising, Hardening, Martempering, Austempering, Hardenability, Quenching, Tempering		
		<b>5 Hours</b>
<b>Unit III</b>		
<b>Chapter 7 Corrosion and Its Prevention</b> Direct corrosion, Electrochemical corrosion, Galvanic cells, High-temperature corrosion, Passivity factors influencing corrosion rate, Corrosion Control and prevention, Inhibitors, Protective coatings		
		<b>5 Hours.</b>
<b>Chapter 8: Typical engineering materials</b> Ferrous metals, Non-ferrous metals and alloys – Aluminium and its alloys, Copper and its alloys, Lead and its alloys, Tin, Zinc and its alloys, Alloys for high-temperature service, Ceramic materials, Refractories, Glasses, abrasives, Plastics, fibres and elastomers, Organic protective coatings.		
		<b>5 Hours.</b>

<b>Program: UG</b>		<b>Semester: IV</b>
<b>Course Title: Problem Solving &amp; Analysis</b>		<b>Course Code: 22EHS202</b>
<b>L-T-P:2-0-0</b>	<b>Credits:2</b>	<b>Contact Hours: 2hrs/week</b>
<b>ISAMarks:100</b>	<b>ESA Marks: 0</b>	<b>TotalMarks:100</b>
<b>Teaching Hours: 16</b>	<b>Examination Duration:</b>	
<b>Content</b>		
<b>Chapter 1. Analytical Thinking</b> Analysis of Problems, Puzzles for practice, Human Relations, Direction Tests; Looking for Patterns: Number and Alphabet Series, Coding Decoding; Diagrammatic Solving: Sets and Venn diagram-based puzzles; Visual Reasoning, Clocks and Calendars.		
		<b>4 Hours</b>
<b>Chapter 2. Mathematical Thinking</b> Number System, Factors and Multiples, Using Simple Equations for Problem Solving, Ratio, Proportion, and Variation.		
		<b>4 Hours</b>
<b>Chapter 3. Verbal Ability</b> Problem Solving using Analogies, Sentence Completion.		
		<b>4 Hours</b>
<b>Chapter 4. Discussions &amp; Debates</b> Team efforts in Problem Solving: A Zero Group Discussion, Mock Group Discussions, and Feedback; Discussion v/s Debate; Starting a Group Discussion: Recruitment and other Corporate Scenarios; Evaluation Parameters in a Recruitment Group Discussion, Types of Initiators: Verbal and Thought, Conclusion of a Discussion.		
		<b>4 Hours</b>

### Curriculum Content - Course wise (Semester – 5)

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Numerical Methods and Statistics</b>		<b>Course Code:24EMAB301</b>
<b>L-T-P:3-0-1</b>	<b>Credits:4</b>	<b>Contact Hours:6Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1. Numerical Methods:</b> Introduction to numerical methods. Roots of equations using Bisection Method, Newton- Raphson Method, Finite differences, Forward, Backward Operators. Newton Gregory forward and backward interpolation formulae. Newton's divided difference formula for unequal intervals. Numerical solution of first order ODE, Euler's and Modified Euler's method, Runge-Kutta 4 <sup>th</sup> order method. Implementation using Python programming.		
		<b>8 Hours</b>
<b>Chapter 2. Matrices and Systems of Linear Equations:</b> Introduction to the system of linear equations, Rank of a matrix by elementary row transformations. Consistency of the system of linear equations, solution of the system by (i) Direct methods: Gauss elimination, Gauss-Jordan method (ii) Iterative methods: Gauss-Seidel method. Eigen values and Eigenvectors of a matrix. Largest Eigen value and the corresponding Eigenvector by the power method. Implementation using Python programming.		
		<b>8 Hours</b>
<b>Unit II</b>		
<b>Chapter 3. Curve fitting and regression:</b> Introduction to method of least squares, fitting of curves $y = a + bx$ , $y = ab^x$ , $y = a + bx + cx^2$ , correlation and regression.		
		<b>5 Hours</b>
<b>Chapter 4. Probability:</b> Definition of probability, addition rule, conditional probability, multiplication rule, Baye's rule. (no proof) Discrete and continuous random variables- PDF-CDF- Binomial, Poisson and Normal distributions (Problems only).		
		<b>9 Hours</b>
<b>Unit III</b>		
<b>Chapter 5. Sampling distributions:</b> (a) Sampling, Sampling distribution, Standard error, Null and alternate hypotheses, Type-I and Type- II errors, Level of significance. Confidence limits for means (large sample). (b) Testing of the hypothesis for means. Large and small samples and Student's t- t-distribution and Confidence limits for means (small sample).		
		<b>10 Hours</b>
<b>Text Books</b> 1. Bali and Iyengar, A textbook of Engineering Mathematics, 6 <sup>th</sup> ed., Laxmi Publications(p) Ltd, New Delhi, 2003 2. Chapra S C and Canale R P, Numerical Methods for Engineers, 5 <sup>th</sup> ed., TATA McGraw-Hill, 2007 3. Gupta S C and Kapoor V K, Fundamentals of Mathematical Statistics, 9 <sup>th</sup> ed., Sultan Chand & Sons, New Delhi, 2002		
<b>Reference Books:</b> 1. Sastry S S, Introductory method for numerical analysis, 3 <sup>rd</sup> Ed, PHI, 2003. 2. J. Susan Milton, Jesse C. Arnold, Introduction to Probability and Statistics: Principles and Applications for Engineering and the Computing Sciences, 4 <sup>th</sup> Ed, TATA McGraw-Hill Edition 2007.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Process Engineering Economics &amp; Plant Design</b>		<b>Course Code:22ECEC301</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Process Design Development:</b> Overall planning of a plant, Feasibility studies and Material and energy balance, Equipment sizing and selection, Process flow sheet, P & I diagram, Plant layout and location.		
		<b>08 hours</b>
<b>Chapter 2: Cost Analysis:</b> Factors affecting investment and production cost, Estimation of capital investment, Factors in capital investment, Estimation of working capital, cost index. Time value of money: Types of interests: Effective and nominal interest rates, present worth and discount.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Depreciation, Taxes, and Profitability:</b> Types of Depreciation and calculation methods Theory of profitability and its evaluation methods.		
		<b>07 hours</b>
<b>Chapter 4: Replacements &amp; Alternatives Investments:</b> Theory of replacements, causes for replacements, types of replacements, Theory of alternative investments, and causes for the same.		
		<b>08 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Financial Statements and Design Report:</b> Introduction to financial statements, Cash flow diagrams, balance sheet, and Break-even analysis. Design report: Introduction to design of reports. Types of reports, Organization of Report and purpose of Report.		
		<b>10 hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Chemical Process Engineering Design And Economics by Silla, Harry, CRC Press, 2017</li> <li>2. Plant Design and Economics for Chemical Engineers by Max Peters, Klaus Timmerhaus, Ronald West, 5<sup>th</sup> Edn., McGraw Hill Education, 2017</li> <li>3. Process Engineering Economics (Chemical Industries) by James Riley Couper, CRC Press, 2003</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>1. Chemical Engineering Process Design and Economics, a Practical Guide by Gael D. Ulrich, 2016</li> </ol>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Computer Applications, Modeling &amp; Simulation</b>		<b>Course Code: 22ECEC302</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Review of Computational Methods:</b> Non-linear Algebraic equation- Newton Raphson. Ordinary Differential Equation - R-K Method. Numerical Integration Simpson's 1/3 Rule. Curve Fitting-Least Squares, Specific volume by Redlich Kwong equation, Batch Reactor, Liquid level in a tank, Nre Vs FF, and Arrhenius equation.		
		<b>10 hours</b>
<b>Chapter 2: Applications of Vapour: Liquid Equilibrium</b> Vapour: Liquid equilibrium for binary mixtures. Calculation of Bubble Pressure and Bubble Point. Dew Pressure and Dew point for Ideal Binary and multi-component system. Flash Vaporization for multi-component system.		
		<b>10 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Design of Process Equipment</b> Design of Reactors: Adiabatic Batch Reactor, Adiabatic P.F.R., Adiabatic CSTR and Combinations. Design of Heat Exchangers: Double Pipe Heat Exchanger (Area, Length and Pressure Drop). Shell & Tube Heat Exchanger (Area, Number of tubes, Pressure drop). Design of Distillation column (Number of trays and height of column).		
		<b>10 hours</b>
<b>Chapter 4: Modeling:</b> Models and model building, principles of model formulations, precautions in model building, Fundamental laws: Review of shell balance approach, continuity equation, energy equation, equation of motion, transport equation of state equilibrium and Kinetics, classification of mathematical models.		
		<b>10 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Mathematical Modeling of Process Equipment:</b> Basic tank model – Level V/s time, Heat exchanger, Batch Distillation – Vapour composition with CSTRs in series. Data-Driven Soft Sensors in the Process Industry.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Process Modeling Simulation and Control for Chemical Engineering, William. L Luyben, 2 <sup>nd</sup> edition, McGraw Hill, 1990. 2. Elements of Chemical Reaction Engineering, H. Scott Fogler, 2 <sup>nd</sup> edition, Prentice Hall, 2001. 3. Introduction to Chemical Engineering Thermodynamics, Smith J. M. and H. C. Vanness, 5 <sup>th</sup> edition, McGraw Hill, 1996. 4. Introduction to Chemical Engineering and Computer Calculations, Myers, A.L and Seider W.D, Prentice Hall, 1976. 5. Felder and Rousseau, Elementary Principles of Chemical Processes, 3 <sup>rd</sup> edition, John Wiley and Sons, Inc., 2005.		
<b>Reference Books:</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Bioprocess Engineering</b>		<b>Course Code: 22ECEC303</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours:4Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction:</b> Bioprocess engineering and technology. Role of a Chemical engineer in bioprocess industry. Microbiology: Structure of cells: Prokaryotes and Eukaryotes. Classification of micro-organisms. Taxonomy, control of microorganisms – physical and chemical methods. Chemicals of Life: Lipids, Sugars, Polysaccharides, Amino acids. Vitamins, Biopolymers, Nucleic Acids: RNA, DNA, and their derivatives (Structure, Biological function and Importance for life only to be studied).		
		<b>7 hours</b>
<b>Chapter 2: Kinetics of Enzyme action:</b> Detailed structure of proteins and enzymes. Functions. Methods of Production and purification of Enzymes. Nomenclature and Classification of enzymes. Kinetics and mechanism of Enzyme action: Michaelis–Menten, Briggs-Haldane approach. Derivation. Reversible Enzyme. Two-substrate. Multi-complexes enzyme kinetics (Derivation of rate equations). Experimental determination of rate parameters: Batch and continuous flow experiments. Line weaver–Burk, Eadie-Hofstee and Hanes-Woolf Plots. Batch Kinetics (Integral and Differential methods).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Enzyme Inhibition:</b> Effect of Inhibitors (Competitive, noncompetitive, uncompetitive, substrate and product inhibitions), Temperature and pH on the rates enzyme catalyzed reactions. Determination of kinetic parameters for various types of inhibitions. Dixon method. Enzyme immobilization: Uses.		
		<b>7 hours</b>
<b>Chapter 4: Fermentation Technology:</b> Ideal reactors: A review of Batch and Continuous flow reactors for bio kinetic measurements. Microbiological reactors: Operation and maintenance of typical aseptic aerobic fermentation processes. Formulation of medium: Sources of nutrients. Introduction to sterilization of bioprocess equipment, Fed-batch reactors. Growth Kinetics of Microorganisms: Transient growth kinetics (Different phases of batch cultivation). Quantification of growth kinetics: Substrate limited growth, Models with growth inhibitors, Continuous culture: Optimum Dilution rate and washout condition in Ideal Chemostat.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Downstream Processing:</b> Strategies and steps involved in product purification. Methods of cell disruption, Filtration, Centrifugation, Sedimentation, Chromatography, Freeze drying / lyophilization. Membrane separation Technology: Reverse Osmosis, Ultra filtration, Micro filtration, Dialysis.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Biochemical Engineering Fundamentals, Bailey and Ollis, 2 <sup>nd</sup> Edition, McGraw Hill, 2017. 2. Bioprocess Engineering, Shuler M. L. and Kargi F., 2 <sup>nd</sup> Edition, Prentice Hall, 2015		
<b>Reference Books:</b>		
3. Principles of Fermentation Technology, Peter Stanbury, Allan Whitaker, Stephen J. Hall, 3 <sup>rd</sup> Edition, Butterworth-Heinemann an Imprint of Elsevier, 2016		

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Mass Transfer</b>		<b>Course Code: 22ECEC304</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours:4Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1. Introduction</b> Diffusion, types of diffusion, Diffusion in liquids, gas, and solids, Mass transfer coefficients. Theories of mass transfer, Interphase mass transfer, stages, cascades, stage efficiency, Material Balance for co-current, cross-current, and counter-current operations, Concept of stages, cascade operation.		
		<b>10 hours</b>
<b>Chapter 2 Gas Liquid Operations</b> The objective of gas-liquid operations, Factors affecting effectiveness, Types of gas-liquid contact, Tray column, Operational difficulties in tray column, types of trays, packed column, types of packing materials, entrainment, channeling, Comparison between the plate and packed column, Liquid hold up- static, total and operating hold up: Venturi scrubber, HTU, NTU, and HETP.		
		<b>10 hours</b>
<b>Unit II</b>		
<b>Chapter 3 Humidification</b> Concepts in humidification – absolute humidity, molal humidity, saturation and unsaturation humidity, dew point, WBT, DBT. Theory of wet bulb temperature and wet bulb equation (Lewis relation), Adiabatic saturation temperature, Humidity chart, Cooling towers.		
		<b>10 hours</b>
<b>Chapter 4 Adsorption</b> Theories of adsorption, Isotherms. Types of operations – single stage operation, multistage cross current operation, multistage counter current operation, problems on adsorption operation, Industrial adsorbents. Adsorption Equipment.		
		<b>10 hours</b>
<b>Unit III</b>		
<b>Chapter 5 Crystallization</b> Factors governing nucleation and crystal growth rates. Controlled growth of crystals. Incorporation of principles into the design of equipment. Different types of crystallizer equipment.		
		<b>7 hours</b>
<b>Chapter 6 Drying</b> Introduction, Moisture content on dry and wet basis, Equilibrium moisture content, Free moisture content, Constant and falling rate period, Drying rate curve, Batch drying, Selection of dryers, Drying equipment.		
		<b>8 hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Mass Transfer Operations by Robert Treybal, 3<sup>rd</sup> Edn 2017</li> <li>2. Unit Operations in Chemical Engineering - McCabe &amp; Smith, 7<sup>th</sup> Edn McGraw Hill, 2017</li> <li>3. Chemical Engineering Vol I, II, IV and V - Coulson and Richardson, 4<sup>th</sup> Edn Pergamon Press, 1998.</li> <li>4. Introduction to Chemical Engineering - Badger &amp; Banchero, TMH 6<sup>th</sup> Reprint 1998</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>1. Principles of Unit Operation - Foust et.al., 2<sup>nd</sup> Edn John Wiley, 2015</li> </ol>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: V</b>
<b>Course Title: Chemical Reaction Engineering - I</b>		<b>Course Code: 22ECEC305</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours:4Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1 Introduction</b> Classification of reactions, Variables affecting rate, Definition of rate equation. Series and parallel reactions, elementary and non elementary reactions, Chemical kinetics and thermodynamics equilibrium. Temperature dependent term of rate equations from Arrhenius theory and comparison with collision and transition state theory. Non - Elementary Reactions: Difference between elementary and non-elementary reactions. Kinetic models and mechanisms for non-elementary reactions.		
		<b>8 hours</b>
<b>Chapter 2 Homogeneous Reactions</b> Interpretation of batch reactor data in constant & variable volume batch reactor. Integral and Differential method of analysis of kinetic data, For irreversible and reversible first, and second order reactions. Zero order, catalytic and auto catalytic, series and parallel reactions.		
		<b>12 hours</b>
<b>Unit II</b>		
<b>Chapter 3 Design of Ideal Reactors</b> Introduction to mass and energy balance equations for the reactor. Definition and concepts of ideal reactors. Development of performance equations for batch, mixed and tubular reactors for both constant and variable volume reactions. Space time, space velocity, and holding time for flow reactors. Numerical problems.		
		<b>13 hours</b>
<b>Chapter 4 Multiple Reactors</b> Plug flow and/or mixed flow reactors in series and parallel. Reactors of different types and sizes in series. General graphical size comparison of single and multiple reactor systems.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5 Design of multiple reactions</b> Parallel reaction - Qualitative and quantitative treatment of product distribution. Series reaction – Qualitative treatment of product distribution.		
		<b>5 hours</b>
<b>Chapter 6 Non-Isothermal reactors</b> Introduction, effect of temperature on equilibrium constant and heat of reaction, Material and Energy balances, general design procedure, optimum temperature progression. Adiabatic and non-adiabatic operations.		
		<b>5 hours</b>
<b>Text Books</b> 1. Chemical Reaction Engineering, Octave Levenspiel, 3 <sup>rd</sup> edition, John Wiley & Sons, 2001. 2. Elements of Chemical Reaction Engineering, H. <p>Mini-project work in chemical engineering for waste recycling is an essential part of a chemical engineering education. It allows students to apply their knowledge and skills to solve a real-world problem and develop their professional skills. Waste recycling is the process of converting waste materials into new materials and objects. It is an alternative to conventional waste disposal that can save material and help lower greenhouse gas emissions. Mini-projects in chemical engineering for waste recycling can address a variety of topics, including waste reduction, reuse, reclamation, and recycling. Mini-project work in chemical engineering for waste recycling provides students with the following benefits:</p> <ul style="list-style-type: none"> <li>• The opportunity to apply their knowledge and skills to solve a real-world problem</li> <li>• Experience working effectively in a team</li> <li>• The ability to communicate their ideas clearly and concisely</li> <li>• The ability to manage a project effectively</li> </ul> <p>The opportunity to develop their professional skills, such as problem-solving, critical thinking, communication, teamwork, and time management.</p>

<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Non Ideal flow</b> Causes of non ideal conditions in reactor. Importance and Interpretation of RTD, Stimulus response technique, C, E & F curves, Conversion using tracer information (first order reaction). Models for non ideal flow – dispersion model and tanks in series Model. Numerical problems.		
		<b>8 hours</b>
<b>Chapter 2: Introduction to heterogeneous reacting systems</b> Introduction to Heterogeneous Systems: Rate equations, contacting patterns. Fluid-particle non catalytic reactions: unreacted core model, particles of unchanging size, shrinking spherical particles. Fluid-Fluid Non Catalytic Reactions: Kinetic regimes for mass transfer and reaction and their rate equations.		
		<b>7 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Catalysis</b> Introduction to Catalysis - General properties of catalyst, promoters, inhibitors, mechanism of catalysis. Estimation methods for catalytic properties, methods for estimation for catalytic Properties. Deactivation of Catalyst and mechanism of deactivation.		
		<b>8 hours</b>
<b>Chapter 4: Solid Catalyzed Reactions</b> Heterogeneous reactions- Introduction, Kinetic regimes. Rate equation for surface kinetics. Pore diffusion resistance combined with surface kinetics. Thiele modulus and enhancement factor, Porous catalyst particles. Heat effects during reaction.		
		<b>7 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Catalytic Reactors</b> Performance equations for reactors containing porous catalyst particles. Experimental methods for finding rates. Packed bed catalytic reactor & reactors with suspended solid catalyst. Fluidized reactors of various types. Gas-Liquid Reactors: Trickle bed, slurry reactors. 3-phase fluidized bed.		
		<b>10 hours</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: VI</b>
<b>Course Title: Mass Transfer - II</b>		<b>Course Code: 25CEEC307</b>
<b>L-T-P:3-1-0</b>	<b>Credits:4</b>	<b>Contact Hours:4 Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:50</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Absorption:</b> Absorption: Introduction, Solvent selection for absorption, Material balance and concept of driving force, Multistage absorption columns, minimum solvent rates, Design of Plate columns, Absorption and desorption factors, Liquid phase hold up and pressure drop in absorption towers. Design of packed towers (process design-height and diameter). Multi-component absorption. Absorption with chemical reaction.		
		<b>14 hours</b>
<b>Chapter 2: Distillation:</b> Introduction: Relative volatility, Prediction of and using relative volatility, types of distillation- Simple and flash distillation.		
		<b>06 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Continuous Distillation</b> Multi-stage rectification column, Reflux ratio- maximum, minimum and optimum reflux ratio, reboiler arrangement, Design using McCabe Thiele method – Feed condition, feed plate location and construction of operating lines, Heating and cooling requirements. Ponchon-Savarit method, Introduction to Multi-component distillation, Extractive and Reactive distillation, Azeotropic distillation and Steam distillation.		
		<b>14 hours</b>
<b>Chapter 5: Leaching:</b> Introduction, Phase and equilibrium diagram, factors affecting the rate of leaching, Leaching operation- single stage operation, multistage cross current operation, multistage counter current operation, Equipment for leaching operation.		
		<b>06 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Extraction:</b> Introduction, selection of solvent for extraction, phase diagram, Extraction operation- single stage operation, multistage cross current operation, multistage counter current operation, Extraction equipment.		
		<b>05 hours</b>
<b>Chapter 5: Introduction to Novel Separations:</b> Membrane processes- Reverse Osmosis, Dialysis, Ultra and Micro-filtrations, Super- critical fluid extraction.		
		<b>05 hour</b>

<b>Course Title: Minor Project</b>		<b>Course Code: 22ECEW302</b>
<b>L-T-P : 0-0-6</b>	<b>Credits: 4</b>	<b>Contact Hours: 16 Hrs/week</b>
<b>ISA Marks : 50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Examination Duration:3 Hrs</b>		

Minor project work in chemical engineering for waste recycling is essential to a chemical engineering education. It allows students to apply their knowledge and skills to solve real-world problems and develop their professional skills. Waste recycling is converting waste materials into new materials and objects. It is an alternative to conventional waste disposal that can save material and help lower greenhouse gas emissions. Mini-projects in chemical engineering for waste recycling can address various topics, including waste reduction, reuse, reclamation, and recycling. Mini-project work in chemical engineering for waste recycling provides students with the following benefits:

- The opportunity to apply their knowledge and skills to solve a real-world problem
- Experience working effectively in a team
- The ability to communicate their ideas clearly and concisely
- The ability to manage a project effectively
- The opportunity to develop their professional skills, such as problem-solving, critical thinking, communication, teamwork, and time management

<b>Course Title: Renewable Energy</b>		<b>Course Code: 22ECEEE301</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Energy Sources:</b> World energy use, reserves of energy resources, energy cycle of the earth, environmental aspects of energy utilization, renewable energy resources and their importance. Solar Energy: Solar radiation and its measurement – solar constant, solar radiation at earth's surface, solar radiation geometry, solar radiation measurement. Introduction to solar energy. Applications – solar water heating, space heating, space cooling, solar thermal electric conversion. Agriculture and industrial process heating, solar distillation, solar pumping, solar cooking.		
		<b>07 hours</b>
<b>Chapter 2: Energy from Biomass (Bio Gas):</b> Introduction. Biomass conversion Technologies. Wet processes. Dry processes. Biogas generation. Factors affecting bio digestion or generation of gas. Classification of biogas plants. Advantages and disadvantages of floating drum plant. Advantages and disadvantages of fixed dome type plant. Types of biogas plants (KVIC model & Janata model). Selection of site for biogas plant.		
		<b>08 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Bio-Energy (Thermal Conversion):</b> Methods of obtaining energy from biomass. Biodiesel, Thermal gasification of biomass. Classification of biomass gasifiers. Chemistry of gasification process. Applications of the gasifiers. Wind Energy: Introduction. Basic components of WECS (wind energy conversion system). Classification of WECS. Types of wind machines-horizontal axis machines, vertical axis machines. Applications of wind energy.		
		<b>07 hours</b>
<b>Chapter 4: Energy from the Oceans:</b> Introduction. Ocean thermal electric conversion (OTEC). Methods of ocean thermal electric power generation. Open cycle OTEC system. Closed or Anderson OTEC cycle, hybrid cycle. Application of energy from oceans. Basic principles of tidal power. Components of tidal power plants. Operation methods of utilization of tidal energy. Advantages and limitations of tidal power generation. Applications of tidal energy..		
		<b>08 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Energy Economy &amp; Legislations:</b> Final energy consumption, Energy needs of growing economy, Long term energy scenario, Energy pricing, energy sector reforms, energy security, energy strategy for future. Energy conservation act, its features and related policies: features of the energy conservation act 2001 and the energy conservation (amendment) act, 2010, schemes under ect-2001, integrated energy policy, NAPCC.

<b>Program: Bachelor of Engineering</b>		<b>Semester: VI</b>
<b>Course Title: Fermentation &amp; Downstream Processing</b>		<b>Course Code: 22ECE302</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to fermentation &amp; Microbial Growth Kinetics:</b> History and development of fermentation, general requirements of the fermentation, range of fermentation processes, parts of a fermentation process-upstream and down stream processing, aerobic and anaerobic fermentation, solid state and submerged fermentation. Batch culture (Quantifying cell concentration, Growth patterns and Kinetics), Continuous culture, Comparison of batch and continuous cultures in industrial processes, Fed batch culture, Examples of use of fed batch cultures.		
		<b>08 hours</b>
<b>Chapter 2: Isolation, preservation Pathways and improvement of industrial Microbes:</b> Isolation, preservation Improvement of industrially important micro organisms, DNA techniques Induction, carbon catabolite repression, crab tree effect, feedback Inhibition and repression.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Media, Sterilization inoculum for industrial fermentations:</b> Introduction, Typical media, Energy sources, Carbon sources, Nitrogen sources, Buffers, Oxygen requirements, Antifoams, Medium optimization, Medium sterilization: The design of batch sterilization processes. The design of continuous sterilization processes, Sterilization of the fermenter, feeds and air, Filter sterilization. The development of inocula for yeast, bacterial and fungal processes, The aseptic inoculation of plant fermenters.		
		<b>08 hours</b>
<b>Chapter 4: Aeration agitation &amp; Design of fermenter:</b> The oxygen requirements and supply of industrial fermentations, Determination of $K_{La}$ , Factors affecting $K_{La}$ values, balance between oxygen supply and demand, Basic function of a fermenter for microbial or animal cell culture, body construction, and various parts of a fermenter.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Important products through Fermentation:</b> Organicacids: citric and aceticacid; enzymes: amylase, protease, lipase; antibiotics: penicillin; vitamins: vitB12; amino acids: lysine, Glutamic acid; organic solvents: ethanol, acetone, butanol, alcoholic beverages: wine, beer; biomass: baker's yeast; bio fertilizers; bio pesticides; biosurfactant; steroid transformation; bio polymers.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Biochemical Engineering Fundamentals by James Bailey and David Ollis, 2 <sup>nd</sup> Edition, McGraw-Hill Education, 2016. 2. Bioprocess Engineering: Basic Concepts by Michael L. Shuler and Fikret Kargi, 2 <sup>nd</sup> Edition, Pearson Education India, 2015. 3. Principles of Fermentation Technology by Peter F. Stanbury, Allan Whitaker, and Stephen J. Hall, 3 <sup>rd</sup> Edition, Butterworth-Heinemann, 2016.		
<b>Reference Books</b>		
1. Biochemical Engineering and Biotechnology by Ghasem Najafpour, 2 <sup>nd</sup> Edition, Elsevier, 2015. 2. Biotechnology: A Textbook of Industrial Microbiology by Wulf Crueger and Anneliese Crueger, 2 <sup>nd</sup> Edition, Sinauer Associates, 1990.

<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction and Scope:</b> Definition of Occupational Health as per WHO/ILO. Occupational Health and Environmental Safety Management – Principles practices. Common Occupational diseases: Occupational Health Management Services at the work place. Pre-employment, periodic medical examination of workers, medical surveillance for control of occupational diseases and health records.		
		<b>08 hours</b>
<b>Chapter 2: Monitoring for Safety, and Health:</b> Occupational Health and Environment Safety Management System, ILO and EPA Standards. Industrial Hygiene: Definition of Industrial Hygiene, Industrial Hygiene: Control Methods, Substitution, Changing the process, Local Exhaust Ventilation, Isolation, Wet method, Personal hygiene, housekeeping and maintenance, waste disposal, special control measures.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Monitoring for Environment:</b> Chemical Hazard: Introduction to chemical hazards, dangerous properties of chemical, dust, gases, fumes, mist, Vapours, Smoke and aerosols. Route of entry to human system, recognition, evaluation and control of basic hazards, concepts of dose response relationship, bio-chemical action of toxic substances. Concept of threshold, limit values.		
		<b>08 hours</b>
<b>Chapter 4: Occupational Health and Environmental Safety Education:</b> Element of training cycle, Assessment of needs. Techniques of training, design and development of training programs. Training methods and strategies types of training. Evaluation and review of training programs. Occupational Health Hazards, Promoting Safety, Safety and Health training, Stress and Safety, Exposure Limit Ergonomics-Introduction, Definition, Objectives, Advantages. Ergonomics Hazards. Musculoskeletal Disorders and Cumulative Trauma Disorders. Physiology of respiration, cardiac cycle, muscle contraction, nerve conduction system etc. Assessment of Workload based on Human physiological reactions. Permissible limits of load for manual Lifting and carrying. Criteria or fixation limits.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Occupational Safety, Health and Environment Management</b> Safety of handling of nanomaterials, Bureau of Indian standards on safety and health 14489 - 1998 and 15001 – 2000, OSHA, Process Safety Management (PSM) as per OSHA, PSM principles, OHSAS – 18001, EPA Standards, Performance measurements to determine effectiveness of PSM. Importance of Industrial safety, role of safety department, Safety committee and function, Role and responsibilities of safety officer		
		<b>10 hours</b>

<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction:</b> Momentum Energy and Mass Transport Newton's law of viscosity (NLV). Newtonian and Non-Newtonian fluids. Fourier's law of heat conduction (FLHC), Fick's law of diffusion (FLD), Effect of temperature and pressure on transport properties of fluids.		
		<b>07 hours</b>
<b>Chapter 2: Velocity Distribution in Laminar Flow:</b> Different Flow situations, Steady state Shell momentum balances, Boundary conditions applicable to momentum transport problems, Flow over a flat plate, Flow through a circular tube, Flow through Annulus.		
<b>Steady State Shell Energy Balances:</b> General Boundary conditions applicable to energy transport problems of chemical engineering. Heat conduction through compound walls. Overall heat transfer coefficient.		
		<b>08 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Temperature Distribution in Solids and in Laminar Flow:</b> Different situations of heat transfer: Heat conduction with internal generation by electrical and nuclear energy sources, Heat conduction in a cooling fin: Forced and free convection heat transfer.		
<b>Concentration Distributions in Laminar Flow:</b> Steady state Shell mass balances. General Boundary conditions applicable to mass transport problems of chemical engineering. Equimolar counter diffusion. Numerical problems.		
		<b>08 hours</b>
<b>Chapter 4: Concentration Distributions in Laminar Flow:</b> Diffusion through stagnant gas and liquid films, Diffusion with homogeneous reaction, Diffusion with heterogeneous reaction Diffusion into falling film – Forced convection mass transfer.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Analogies between Momentum, Heat and Mass Transport:</b> Reynold's, Prandtl's and Chilton & Colburn analogies.		
<b>Equations of Change:</b> Equation of continuity, Equation of motion; Navier – Stokes equation.		
		<b>10 hours</b>

<b>Course Title: Instrumentation Engineering</b>		<b>Course Code: 22ECE306</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Basics of Instrumentation</b> Introduction, Instrument symbols & Tag numbering system, Organization of instrumentation dept. Electric Power Systems, Instrument Power Requirements, Instrument. Power Distribution, Control Room Lighting, Communication Systems, Electrical Classifications, Control Panel Types, Flat face Panels, Breakfront Panels, Consoles, Comparison Of Panel Types, Panel Layout, Face Layout, Rear Layout, Auxiliary Racks & Cabinets, Panel Piping & Tubing, - Air Headers, Tubing Runs, Panel Wiring, Nameplates & Tags, Painting, Graphic Displays - Control Room Layout Panel, Human engineering, Panel enclosure standard - Bid Specifications, Panel Inspections, Control center inspection.		
		<b>07 hours</b>
<b>Chapter 2: Instrument Air System &amp; Control Valves:</b> Sizing criteria, pressure level, air supply source, Compressor systems, positive displacement compressors, dynamic compressors, non lubricated compressor, compressor cooling, compressor Control Oil removal, general considerations, refrigeration type, necessity for dryers, desiccant type, Design guideline criteria, distribution systems, general layout, Header & branch sizing, materials, take off & valving, control room air supply, case purging for electrical area classification Valve Terminology, Valve Capacity, Valve rangeability, Valve type based on body Design: Globe Bodies, Angle, Needle, Ball, Eccentric Rotating, Plug, Butterfly, Diaphragm, Pinch, Drag Flow Characteristic, Trim Design, Mechanical Feature Actuator, Pneumatic Types, Electric Types, Electro Hydraulic Types Positioner- Pneumatic, Electro Pneumatic, Positioner Features & accessories, Control Valve Accessories. Testing procedure of control valve CV and Rangeability (Valve sizing- initial level), Relief valve, Safety valves and Rupture discs.		
		<b>08 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Signal Converting Elements :</b> Pneumatic to electrical convertors, Electric to Pneumatic convertors, Voltage to Current convertor, Current to Voltage convertor, Frequency to voltage & Voltage to Frequency convertor.s		
		<b>08 hours</b>
<b>Chapter 4: Indicator recorders and Actuators:</b> Indicators: Types of Indicators for various applications, Recorders: Types of recorders and its merits and demerits, Annunciators: Function, sequences displays, types, - Microprocessor for recording, announcing and indicating purpose.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Transmitters:</b> Pneumatic Transmitter- Force balance & Motion Balance, Electronic Transmitter- 2- wire & 4-wire system, Smart Transmitter.		
		<b>10 hours</b>
<b>ext Books</b> 1. William Andrews, Applied Instrumentation in the Process Industry Vol. I & II, Gulf Publishing Co., 1994. 2. B.G. <b>Program: Bachelor of Engineering</b>	<b>Semester: VI</b>
---	---------------------

<b>Course Title: Chemical Plant Utilities</b>		<b>Course Code: 22ECEEE307</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1 Introduction</b> Different utilities. Role of utilities in process plant operations and criteria for selection and estimation of suitable utilities. <b>Water:</b> Water resources. Quality Standards for Process water, cooling water, drinking water and boiler feed water. Water treatment processes for drinking, process and boiler feed. Storage and handling of water. Water pre-treatment for cooling tower, boilers and chillers.		
		<b>08 ours</b>
<b>Chapter 2 Air</b> Compressed air, blower air, fan air. Types of compressors and vacuum pumps and selection. Power requirements, performance, and related calculations. Booster and receivers. Quality of compressed air for instruments and processes. Compressed air distribution system- piping and accessories. Air-water vapour system: humidification/ dehumidification and evaporative cooling-related calculations. Insulation: Insulation Materials & Selection- Economics of insulation. Insulating factors. Properties & Classification.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3 Steam and Power</b> Steam generation in chemical plants. Types of boilers and waste heat boilers. Fuels-types, emissions and global warming, green fuels. Cogeneration power plants. CHPs and Boiler performance. Related calculations. Economy of steam generation with different fuels. Steam storage and handling-piping and accessories. Boiler performance. Economy of steam generation with different fuels. Steam storage and handling-piping and accessories.		
		<b>08 hours</b>
<b>Chapter 4 Refrigeration</b> Different refrigeration systems and their characteristics. Air-conditioning systems. Coefficient of performance. Power requirements and refrigeration effect- related calculations for each type of refrigeration system. Refrigerant properties and selection. Some commonly used refrigerants and secondary refrigerants. Cold insulation and cryogenic insulation.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5 Energy Safety Devices</b> Pressure relief valves. Rupture discs. Blow down systems. Flare systems. Flame arrestors. Deflagration arrestors and explosion suppression. Personal safety devices. Process Safety Analysis: HAZAN and HAZOP comparison. Risk analysis and estimation. Safety check list. Computer based quantitative risk analysis. Case study of Risk analysis using ML.

### Curriculum Content - Course wise (Semester – 7)

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Process Equipment Design and Drawing</b>		<b>Course Code: 25ECEC401</b>
<b>L-T-P: 3-1-0</b>	<b>Credits: 4</b>	<b>Contact Hours: 4Hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 50</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Note: Drawing/Sketching to be given as assignments and shall not be included in the ESA.</b>		
<b>Unit I</b>		
<b>Chapter 1 Introduction</b> General design procedure, equipment classification, design codes, design pressure, design temperature, design stress, factor of safety, design wall thickness, corrosion allowance, and weld joint efficiency factor. Basic drawing and design considerations of vessel components, vessel enclosure, supports, types of welding, flanges and reinforcement.		
		<b>10 hours</b>
<b>Unit II</b>		
<b>Chapter 2 Shell and Tube Heat Exchanger</b> Basic design procedure of heat exchangers. Process requirements, including temperature profiles, pressure constraints, and material compatibility. Design a shell-and-tube heat exchanger, including the configuration of shell and tube arrangements, and optimise the heat transfer area and pressure drop.		
		<b>08 hours</b>
<b>Chapter 3 Condenser</b> Basic design procedure of heat exchangers. Process requirements, including temperature profiles, pressure constraints, and material compatibility. Condenser design, including the configuration of shell and tube arrangements, and optimisation of heat transfer area and pressure drop, as well as the design of horizontal and vertical condensers.		
		<b>08 hours</b>
<b>Chapter 4 Evaporator</b> Calculate the required heat transfer area for effective evaporation. Determine the appropriate number and size of tubes for the evaporator, ensuring optimal vapour-liquid separation and efficient evaporation. Calculation of the size of the vapour drum to handle the vapour load and to maintain process stability. Aspects of mechanical design, including material selection, pressure vessel design, structural integrity, and compliance with industry standards and safety regulations.		
		<b>08 hours</b>
<b>Chapter 5 Sieve Tray Distillation Column</b> Design and operation of sieve tray towers, focusing on the principles of vapour-liquid contact and mass transfer in distillation processes. Evaluate and prevent operational issues such as weeping, downcomer flooding, and liquid entrainment. Calculation of total height of the distillation column, taking into account the number of trays, tray spacing, and height of the feed, vapour and liquid flow rates, and the height required for proper vapour-liquid disengagement at the top of the column.		
		<b>08 hours</b>
<b>Chapter 6 Packed Bed Absorption Column</b> Selection of appropriate packing materials based on factors like surface area, void space, pressure drop, and material compatibility with the process fluids. Determine the optimal tower diameter, considering both gas and liquid flow rates, as well as the type of packing. Calculate the number of transfer units (NtoG) and the height of transfer units (HtoG) required to achieve the desired mass transfer, and how to use these values to determine the total height of the packing needed for efficient absorption.		
		<b>08 hours</b>

**Text Books**

1. Process Equipment Design by M. V. Joshi, 3<sup>rd</sup> Edition, Reprint, McMillan & Co. India, Delhi, 1998.
2. Process Design of Equipment – Volume 1 by S. D. Dawande, 6<sup>th</sup> Edition, Central Techno Publications, 2003.
3. Perry's Chemical Engineers' Handbook by R. H. Perry and D. W. Green, 7<sup>th</sup> Edition, McGraw-Hill, 1998.
4. Process Heat Transfer by Donald Q. Kern, McGraw-Hill, 1997.
5. Chemical Engineering Volume VI: Chemical Engineering Design by J. M. Coulson and J. F. Richardson, Pergamon Press, 1993.
6. Chemical Process Equipment: Selection and Design by James R. Couper, W. Roy Penney, James R. Fair, and Stanley M. Walas, Gulf Professional Publishing (Elsevier).

**Reference Books:**

1. Specifications for Shell and Tube Heat Exchanger – Code Book IS 4503:1963, Bureau of Indian Standards.
2. Specifications for Pressure Vessels – IS 2825:1969, Bureau of Indian Standards.
3. Process Equipment Design: Vessel Design by L. E. Brownell and E. H. Young, John Wiley & Sons, 1959.

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Process control and IIoT</b>		<b>Course Code: 22ECEC402</b>
<b>L-T-P: 3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 4 Hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Instrumentation</b> Fundamentals: Static and dynamic characteristics. Indicators and recorders. Pressure measurement- Bourdon, diaphragm and bellow type gages. Vacuum measurements. Temperature measurement- Bimetal and resistance thermometers, thermocouples and pyrometers.		
		<b>8 hours</b>
<b>Chapter 2: First-Order Systems</b> First-Order Systems: Thermometer, level, mixing tank, STR, Linearization, I-order systems in series. Response for various input forcing functions. Second Order Systems: Characteristics of the manometer and damped vibrator. Transfer functions. Response for various input forcing functions, response for step input for the underdamped case – Terms associated with it. Transportation lag.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Closed Loop System</b> Basic components. Servo and regulator control. Controllers – P, I, D and On–Off modes. Controller Combinations - Final Control Elements: Valves, Actuators, and Valve Positioners. Closed Loop Response: Block diagram, Closed loop transfer function, Transient response of servo and regulator control systems with various controller modes and the characteristics.		
		<b>8 hours</b>
<b>Chapter 4: Stability</b> Stability of linear control systems. Routh Test. Frequency Response – Bode diagrams. Control System Design by Frequency Response: Bode criterion. Gain and Phase margins, Ziegler–Nichols controller tuning, Cohen–Coon controller tuning. Root Locus: Rules for plotting and problems.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Introduction to Industrial IIoT Systems</b> The Various Industrial Revolutions, Role of Internet of Things (IoT) & Industrial Internet of Things (IIoT) in Industry, Industry 4.0 revolutions, Support System for Industry 4.0, Smart Factories. Sensors and Actuators for Industrial Processes, Sensor networks, Process automation and Data Acquisitions on IIoT Platform, Real Time Dashboard for Data Monitoring, Data Analytics and Predictive Maintenance with IIoT technology. Case studies and data analysis based on environmental, agriculture, and hydroponics parameters such as humidity, temperature, and the effect of pesticides and fertilisers.		
		<b>8 hours</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Introduction to Sustainable Technologies</b>		<b>Course Code: 25ECEE401</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Sustainable Engineering and Life Cycle Assessment (LCA)</b> Definition and principles of sustainable engineering, The three pillars of sustainability (environmental, economic, and social), Life Cycle Assessment (LCA) methodology and its application in chemical engineering, Environmental impact assessment (EIA) and its role in sustainable process design.		
		<b>5 hours</b>
<b>Chapter 2: Green Chemistry and Catalysis for Sustainability:</b> Principles of Green Chemistry and the 12 Principles of Green Engineering, Design of environmentally benign chemical reactions and processes, role of catalysis in sustainable chemical production, Biocatalysis and its applications in the chemical industry.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Renewable Resources and Energy Efficiency:</b> Transitioning to a renewable energy future (solar, wind, biomass), Integration of renewable energy sources in chemical processes, Energy efficiency principles and process optimisation for reduced energy consumption, Carbon capture, utilisation, and storage (CCUS) technologies.		
		<b>8 hours</b>
<b>Chapter 4: Sustainable Water Management and Wastewater Treatment):</b> Water scarcity and its implications for the chemical industry, Water conservation strategies in process design and operation, Sustainable wastewater treatment technologies (biological, membrane-based), Water reuse and resource recovery from wastewater (considering water, carbon capture, air pollution control, and soil management).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Sustainable Life Cycle Management and Case Studies :</b> Design for sustainability across the entire product life cycle, Industrial symbiosis and eco-industrial parks for resource exchange, Life cycle costing and techno-economic analysis of sustainable technologies, Case studies of successful implementation of sustainable technologies in the chemical industry, and adoption of sustainable technologies at the campus.		
		<b>8 hours</b>
<b>Text Books</b>		
1. Green Engineering: Environmentally Conscious Design of Chemical Processes by David T. Allen and David R. Shonnard, published by Prentice Hall in 2001.		
<b>Reference Books:</b>		
2. Sustainable Design for Chemical Processes: A Systematic Approach by Natarajan Gowindan and David P. Rao, published by Academic Press in 2020. 3. Introduction to Sustainable Engineering by R. L. Rag and Lekshmi Dinachandran Remesh, published by PHI Learning in 2015 4. Elements of Sustainable Chemical Process Design by Robert Smith, published by Wiley in 2005 5. Industrial Ecology and Sustainable Engineering by T. E. Graedel and Braden R. Allenby, published by Prentice Hall (Pearson) in 2009 (1 <sup>st</sup> Edition) and updated/copyright 2010.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Food Technology</b>		<b>Course Code: 22ECE402</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Food Processing and Sustainability:</b> Importance of food processing in the modern world, Unit operations in food processing (mixing, heat transfer, mass transfer, size reduction), Role of Chemical engineers in food processing design and optimisation, Sustainability considerations in food processing (energy efficiency, water conservation, waste minimisation), Life Cycle Assessment (LCA) applied to food production systems.		
		<b>8 hours</b>
<b>Chapter 2: Food Chemistry and Engineering Properties:</b> Chemical composition of major food components (carbohydrates, proteins, lipids, vitamins, minerals), Chemical reactions and interactions affecting food quality and safety, Physical properties of food materials relevant to processing (rheology, thermal properties, mass transfer), Role of water activity in food preservation and stability.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Unit Operations in Food Processing :</b> Application of heat transfer principles in food processing (pasteurisation, sterilisation, drying, freezing), Mass transfer operations in food processing (Filtration, evaporation, concentration, extraction), Design considerations for food processing equipment (heat exchangers, evaporators, filters), Emerging technologies in food processing (microwave, ohmic heating, high-pressure processing).		
		<b>8 hours</b>
<b>Chapter 4: Food Safety and Quality Control</b> Sources of foodborne illness and spoilage microorganisms, Food preservation methods and their impact on quality, Chemical hazards in food and their mitigation strategies, Quality control measures in food processing (HACCP, sensory Evaluation).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Food Product Design and Innovation:</b> Formulating food products based on desired functionalities and consumer preferences, role of chemical engineers in developing novel food products, Sustainable food packaging materials and technologies, Food product labelling and regulations, Case studies of innovative and sustainable food processing technologies.		
		<b>8 hours</b>
<b>Text Books</b>		
1. Introduction to Food Engineering by R. Paul Singh, Dennis R. Heldman, and Ferruh Erdogan, published by Academic Press (Elsevier) in 2024		
<b>Reference Books:</b>		
2. Food Process Engineering by Ashim K. Datta, CRC Press, 2005, 3 <sup>rd</sup> Edition)		
3. Emerging Technologies in Food Processing by Sunil Kumar, Apple Academic Press		
4. Food Chemistry by Owen R. Fennema, 4 <sup>th</sup> Edition, CRC Press, 2007		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Advanced Process Control</b>		<b>Course Code: 22ECE403</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>1. Chapter 1: Introduction to Advanced Control Schemes:</b> Cascade, Feed-forward, Feed-forward plus Feedback, Ratio control, Inferential control, Dead time and Inverse response compensation, Adaptive control, Model reference adaptive control, Self-tuning regulator, Interactions and Decoupling of Control Loops: Design of cross controllers and selection of loops using Relative Gain Array.		
		<b>08 hours</b>
<b>2. Chapter 2: Distributed Control System (DCS):</b> Evolution and advantages of computer control, Configuration of Supervisory, Direct digital control (DDC) and DCS.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>3. Chapter 3: Artificial Intelligence in Process Control:</b> Expert systems, Neural networks, Fuzzy logic, NeuroFuzzy, Genetic algorithm, Virtual instrumentation.		
		<b>08 hours</b>
<b>4. Chapter 4: Programmable Logic Controllers:</b> Comparison with hard-wired relay and semiconductor logic, Hardware, Ladder diagram programming, Case studies, Introduction to CPLD, SPLD, FPGA.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>5. Chapter 5: Digital Control:</b> Sampling and reconstruction, Discrete systems analysis, Stability and controller design using z transform and difference equations, Smoothing filter realisation using difference equations.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Stephanopoulos, G., Chemical Process Control, Prentice Hall of India Private Limited, 1983.		
<b>Reference Books</b>		
1. Liptak, B. G., Instrument Engineers Handbook, Chilton Book Company, 1994.		
2. Deb, S. R., Robotics Technology and Flexible Automation, Tata McGraw-Hill, 1994.		
Johnson, C. D., Process Control Instrumentation Technology, Prentice Hall of India Private Limited, 2007.

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Waste Management</b>		<b>Course Code: 22ECE404</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Waste Management and Sustainability:</b> Importance of waste management in the chemical process industry, classification of waste (hazardous, non-hazardous, solid, liquid, and gaseous), Environmental regulations and legislation governing waste management, Life Cycle Assessment (LCA) for waste management systems, and Introduction to sustainable waste management principles (waste hierarchy and circular economy).		
		<b>8 hours</b>
<b>Chapter 2: Waste Minimisation and Resource Recovery:</b> Source reduction strategies in chemical processes to minimise waste generation, Process design for waste minimisation and pollution prevention, recycling and reuse of waste materials in the chemical industry, and Techno-economic analysis of waste minimisation and recovery options (e-waste and biomedical waste).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Treatment and Disposal of Hazardous Waste:</b> Characterisation of hazardous waste and its potential environmental impacts, Physical, chemical, and biological treatment methods for hazardous waste, landfill and incineration of hazardous waste (with a focus on environmental safeguards), and Technologies for hazardous waste treatment and disposal.		
		<b>8 hours</b>
<b>Chapter 4: Treatment and Disposal of Non-Hazardous Waste:</b> Treatment of non-hazardous waste (municipal solid waste, industrial waste), Biological treatment of organic waste (composting, anaerobic digestion), Thermal treatment of non-hazardous waste (waste-to-energy), Landfilling of non-hazardous waste with leachate management strategies.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Waste Management Planning:</b> Analysis of real-world case studies of successful waste management practices in the chemical industry, Waste management planning for a hypothetical chemical process, Sustainability considerations in waste management planning, Public perception, and social aspects of waste management.		
		<b>8 hours</b>
<b>Text Books</b>		
1. The Solid Waste Handbook: A Practical Guide, William D. Robinson, Wiley-Interscience, 1st Edition, 1986. 2. Hazardous Waste Management, Michael D. LaGrega, Phillip L. Buckingham, Jeffrey C. Evans, and Environmental Resources Management, 2nd Edition, McGraw-Hill International Edition.		
<b>Reference Books:</b>		
1. Municipal Solid Waste Management: Strategies and Technologies for Sustainable Solutions, Christian Ludwig, Stefanie Hellweg, Samuel Stucki, Springer Nature, 2012. 2. Sustainable Waste Management Challenges in Developing Countries, Agamuthu Pariatamby, Fauziah Shahul Hamid, Mehran Sanam Bhatti, IGI Global, 2020.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Petroleum and Petrochemicals Engineering</b>		<b>Course Code: 22ECE405</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Petroleum</b> Indian Petroleum Industry, Prospects and Future. Offshore and onshore, Origin, composition and classification of petroleum, Evaluation of petroleum by UOP-k factor, TBP analysis, EFV analysis. Average boiling point. ASTM curves. Thermal properties of petroleum fractions.		
		<b>8 hours</b>
<b>Chapter 2: Product Properties and Test Methods:</b> Gas. Various types of gas and LPG. Reid vapour pressure analysis. Gasoline and naptha. Octane No. Oxidation stability. Additives for gasoline. Kerosene. Characterisation for flash point or fire point, volatility, burning qualities, octane testing, and viscosity. Grades of diesels: HSD, LDO. Diesel additives. Lube oils: Types, tests, carbon residue and viscosity index, Sustainability considerations in the petroleum sectors.		
		<b>7 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Crude processing and treatment methods:</b> Pretreatment of crude for Refining, Dehydration and desalting, Atmospheric distillation, Vacuum distillation of residue products, Types of trays, flow pattern in the trays, Reflux types and their significance. Production and treatment of LPG, sweetening of petroleum products, including mercox: ethanolamine, and copper chloride. Treatment of kerosene: De-aromatisation. Treatment of diesel, naptha and lubes: sulphuric acid, clay treatment and solvent treatment.		
		<b>8 hours</b>
<b>Chapter 4: Theory of Cracking and Processes</b> Thermal cracking: Theory of thermal cracking, Properties of cracked materials and factors influencing the properties of cracked materials, Vis breaking, Dubs' coil cracking process. Catalytic cracking: Carbonium ion chemistry, Fixed bed crackers, Moving bed crackers. Fluid catalytic cracking: Flexi cracking-ortho-flow reactor. Naptha cracking for ethylene as feed selection and gas yield. Hydro cracking. Theory of hydro cracking. Catalysts for hydrocracking.		
		<b>7 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Introduction to petrochemicals and their derivatives:</b> Overview of Petrochemical Industry, Feedstock selections for Petrochemicals – Steam cracking of natural gas and naphtha to produce olefins, diolefins and production of acetylene. Synthesis gas, and the Production of Methanol.		
		<b>5 hours</b>
<b>Chapter 6: Unit Processes in Petrochemical Industries.</b> Production of major petrochemicals (ethylene, propylene, aromatics) from petroleum fractions, Alkylation, Nitration, Hydrolysis, sulfonation, sulfation, and Isomerisation.		
		<b>5 hours</b>
<b>Text Books</b>		
1. Nelson, "Petroleum Refinery Engineering", McGraw-Hill, 4 <sup>th</sup> Edition, 14 <sup>th</sup> reprint, 1982. 2. Bhaskar Rao, "Modern Petroleum Refining Processes", Oxford and IBH Publishers, 3 <sup>rd</sup> Edition, reprint, 2000. 3. Bhaskara Rao, B. K., "A Text on Petrochemicals", Khanna Publishers, 2012.		
<b>Reference Books:</b>		
1. Ram Prasad, "Petroleum Refining Technology", Khanna Publishers, First Edition, 2000. 2. Sami Matar and Lewis F. Hatch, "Chemistry of Petrochemical Processes", 2 <sup>nd</sup> Edition, Gulf Professional Publishing.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Process Modelling &amp; Simulation</b>		<b>Course Code: 22ECE406</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3 Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Process Modelling and Simulation :</b> Definition and importance of process modelling in chemical engineering, Types of process models (steady-state, dynamic, lumped, distributed), Introduction to process simulation software (Aspen Plus®, HYSYS), Applications of process simulation in process design, optimisation, and troubleshooting, Sustainability considerations in process modelling (e.g., integrating energy efficiency calculations).		
		<b>8 hours</b>
<b>Chapter 2: Material and Energy Balances in Modelling:</b> Applying stoichiometry and conservation principles to develop process models, Degrees of freedom analysis for model solvability, Introduction to thermodynamic property estimation methods for simulations, Case studies: Modelling simple unit operations (mixing, splitting, reactors).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Modelling of Unit Operations and Equipment:</b> Steady-state modelling of common unit operations (distillation, evaporation, heat exchangers), Introduction to reactor modelling (plug flow, stirred tank) and kinetic parameter estimation, Integration of unit operation models to simulate flow sheets, Sustainability considerations in unit operation modelling (e.g., including energy consumption data).		
		<b>8 hours</b>
<b>Chapter 4: Process Simulation Software and Case Studies :</b> Hands-on training on using process simulation software for model building and simulation, Case studies: Simulation of complex chemical processes (e.g., ammonia production, petroleum refining), Data analysis and interpretation of simulation results, Sustainability assessments using process simulation tools (e.g., carbon footprint calculations).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Process Optimisation and Design Improvement :</b> Introduction to process optimisation techniques for improving process performance, Integration of process simulation with optimisation algorithms, Case studies: Optimising process parameters for efficiency, yield, and sustainability metrics, Future trends in process modelling and simulation (e.g., Integration with machine learning).		
		<b>8 hours</b>
<b>Text Books</b> 1. Introduction to Chemical Engineering Computing by Bruce A. Finlayson, published by Wiley-Interscience (2 <sup>nd</sup> Edition, May 12, 2014)		
<b>Reference Books:</b> 1. Computer Aided Process Engineering by Rafiqul Gani and John M. Evans. 2. Aspen Plus® User Guide (Latest Version). 3. Process Modelling and Simulation: A Practical Approach to Design Processes by Michael L. Darby, Wiley, 2022. 4. Sustainable Design for Chemical Processes: A Systematic Approach by Himadri B. Baskar, CRC Press, 1 <sup>st</sup> Edition, 2021		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Pollution Control Technologies</b>		<b>Course Code: 22ECE407</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Pollution Control and Sustainability:</b> Types of environmental pollution (air, water, soil) and their sources, Environmental regulations and legislation governing pollution control, Introduction to pollution prevention strategies and waste minimisation techniques, Life Cycle Assessment (LCA) for evaluating environmental impact of processes and pollution control systems, The role of chemical engineers in designing sustainable pollution control solutions. <b>8 hours</b>		
<b>Chapter 2: Air Pollution Control Technologies :</b> Characteristics and control of major air pollutants (particulate matter, SO <sub>x</sub> , NO <sub>x</sub> , VOCs), Control technologies for particulate matter (Filtration, cyclones, electrostatic precipitators), Gaseous pollutant control technologies (scrubbing, adsorption, incineration), Emerging air pollution control technologies (biofiltration, plasma technology), Sustainability considerations in air pollution control (energy efficiency, waste minimisation). <b>8 hours</b>		
<b>Unit II</b>		
<b>Chapter 3: Wastewater Treatment Technologies :</b> Characteristics and treatment of industrial wastewater, Physical, chemical, and biological wastewater treatment processes, Design considerations for primary, secondary, and tertiary wastewater treatment systems, Sludge management and disposal options, Sustainability considerations in wastewater treatment (water conservation, resource recovery). <b>8 hours</b>		
<b>Chapter 4: Pollution Control for Other Environmental Media :</b> Control of soil and groundwater contamination (remediation techniques), Solid waste management strategies (landfills, incineration, recycling), Noise pollution control methods, Sustainability considerations in managing other environmental contaminants. <b>8 hours</b>		
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Design Applications :</b> Analysis of real-world case studies of successful pollution control implementations in the chemical industry. Design project: Students will design a pollution control system for a specific industrial process, considering both technical and sustainability aspects, as well as sustainability considerations in pollution control system design and operation. <b>8 hours</b>		
<b>Text Books</b> 1. Air Pollution Control Engineering (2 <sup>nd</sup> Edition), edited by Lawrence K. Wang, Norman C. Pereira, and Yung Tse Hung, Humana Press, 2 <sup>nd</sup> Edn, published on July 2, 2004.		
<b>Reference Books:</b> 1. Wastewater Engineering: Treatment and Reuse (5 <sup>th</sup> Ed.), by Metcalf & Eddy Inc., McGraw-Hill Education. 2. Environmental Management Systems (2 <sup>nd</sup> Edition) by Norman R. Council and Fredric C. Elliott, American Water Works Association (AWWA), 2011. 3. Introduction to Environmental Engineering and Science (3 <sup>rd</sup> Edition) by Gilbert M. Masters and William P. Ela, Prentice Hall, 2007. 4. Green Engineering: Design for Environmental Sustainability (2 <sup>nd</sup> Edition) by David T. Allen and David R. Shonnard, Prentice Hall.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Pulp &amp; Paper Technology</b>		<b>Course Code: 22ECE408</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Pulp &amp; Paper Industry and Sustainability:</b> Importance of pulp and paper products in society, Raw materials for pulp and paper production (wood resources, fibres), Overview of the pulping, bleaching, and papermaking processes, Environmental impact of the pulp and paper industry (air and water pollution, resource depletion), Sustainability initiatives and best practices in pulp and paper manufacturing.		
		<b>8 hours</b>
<b>Chapter 2: Pulping Processes:</b> Chemical pulping methods (kraft, sulfite pulping) and their principles, Mechanical pulping methods (groundwood, thermomechanical pulping), role of chemical engineers in pulping process design and optimisation, Sustainability considerations in pulping (reduced chemical usage, energy efficiency).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Bleaching Processes:</b> Purpose and stages of bleaching (delignification, brightening), Chemical bleaching agents and their mechanisms (chlorine, chlorine dioxide, oxygen), Environmental concerns associated with bleaching processes, Alternative bleaching technologies and sustainable practices (enzymatic bleaching, ozone bleaching).		
		<b>8 hours</b>
<b>Chapter 4: Papermaking Processes and Paper Properties:</b> Stock preparation and papermaking unit operations (beating, refining, sheet forming), Paper additives and their functions (fillers, coatings, sizing agents), Paper testing methods for key properties (strength, brightness, opacity), Sustainability considerations in papermaking (recycled fibre utilisation, water conservation).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Process Integration and Future Trends:</b> Integration of pulping, bleaching, and papermaking processes for efficiency, Life Cycle Assessment (LCA) for evaluating the environmental impact of paper products, Emerging technologies in pulp and paper manufacturing (biorefining, nanocellulose), The future of the pulp and paper industry in a sustainable bioeconomy.		
		<b>8 hours</b>

1. Pulp & Paper Chemistry and Technology, 4th Edition by James P. Casey; Wiley-Interscience, 1983 (3 <sup>rd</sup> volume edition of the 4-volume set)		
<b>Reference Books:</b>		
1. Bleaching of Pulp, 3 <sup>rd</sup> Edition by Carlton W. Dence and Douglas W. Reeve; TAPPI Press, 1996; ISBN 0898520630/9780898520637		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Data Analytics &amp; Applications in Chemical Engineering</b>		<b>Course Code: 22ECEE409</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Data Analytics and Sustainability:</b> Importance of data analytics in chemical engineering, Types of data relevant to chemical processes (sensor data, historical records, experimental data), Introduction to data science tools and programming languages (Python, R), Sustainability metrics and data-driven approaches for sustainable process design, Case studies: Applications of data analytics in sustainability initiatives (e.g., energy optimisation, waste reduction).		
		<b>8 hours</b>
<b>Chapter 2: Data Acquisition, Preprocessing, and Exploration:</b> Data acquisition methods from sensors, experiments, and databases, Data cleaning, handling missing values, and outlier detection, Data visualisation techniques for exploring and understanding process data, Sustainability considerations in data acquisition (e.g., minimising sensor energy consumption).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Statistical Analysis and Process Monitoring:</b> Statistical methods for analysing process data (descriptive statistics, hypothesis testing), Statistical process control (SPC) techniques for monitoring process performance, Fault detection and diagnosis using data analytics, Sustainability considerations in process monitoring (e.g., early detection of inefficiencies for energy savings).		
		<b>8 hours</b>
<b>Chapter 4: Machine Learning and Process Optimisation:</b> Introduction to machine learning algorithms (regression, classification), Building and evaluating predictive models for process variables and product properties, Process optimisation using machine learning models, Sustainability considerations in process optimisation (e.g., optimising for reduced emissions).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Advanced Applications:</b> Analysis of real-world case studies on data analytics applications in chemical engineering plants, Introduction to advanced data analytics techniques (e.g., big data analytics, artificial neural networks), The future of data analytics in chemical engineering and its role in sustainability advancements.		
		<b>8 hours</b>
<b>Text Books</b>		
1. Data Science for Chemical Engineering: Applications in Process Optimisation, Product Design, and Materials Discovery (2nd Edition) by Yongjie Lin, et al.		
<b>Reference Books:</b>		
1. Machine Learning for Chemical Engineers: With Examples Using Scikit-learn (2 <sup>nd</sup> Edition) by F. Joel Ayres, CRC Press, 2023. 2. Elements of Chemical Reaction Engineering (5 <sup>th</sup> Edition) by H. Scott Fogler (originally by Octave Levenspiel), Pearson, 2016. 4. Sustainable Design for Chemical Processes: A Systematic Approach (3 <sup>rd</sup> Edition) by Himadri B. Baskar, CRC Press, 2024		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Unit Operations in Environmental Engineering</b>		<b>Course Code: 22ECEEE410</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Unit Operations and Environmental Engineering :</b> Definition and importance of unit operations in environmental engineering, Overview of water and wastewater treatment processes, Air pollution control principles and unit operations, Sustainability considerations in environmental engineering design (e.g., energy efficiency, resource recovery), Life Cycle Assessment (LCA) for evaluating environmental impact of treatment systems.		
		<b>8 hours</b>
<b>Chapter 2: Physical Unit Operations :</b> Fluid mechanics and applications in environmental engineering (pumping, mixing), Particle size distribution and characterisation, Filtration (media filtration, membrane filtration) for water and air treatment, Sedimentation and thickening processes, Sustainability considerations in physical unit operations (e.g., low-energy Filtration).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Chemical and Biological Unit Operations :</b> Chemical equilibria and applications in water and wastewater treatment (e.g., pH adjustment, precipitation), Disinfection methods for water and wastewater treatment, Biological wastewater treatment processes (activated sludge, trickling filters), Introduction to advanced oxidation processes (AOPs) for pollutant removal, Sustainability considerations in chemical and biological processes (e.g., bioenergy production from wastewater).		
		<b>8 hours</b>
<b>Chapter 4: Gas Transfer and Air Pollution Control :</b> Mass transfer principles and applications in air pollution control, Gas absorption and stripping for air pollutant removal, adsorption and biofiltration for air pollution control, Particulate matter control technologies (cyclones, electrostatic precipitators), Sustainability considerations in air pollution control (e.g., energy-efficient scrubbers).		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Design Applications :</b> Analysis of real-world case studies on successful applications of unit operations in environmental projects. Design project: Students will design a treatment system for a specific water/wastewater or air pollution control challenge, considering technical and sustainability aspects, including Sustainability considerations in unit operation selection and the design process.		
		<b>8 hours</b>

<b>Course Title: Polymer Science &amp; Technology</b>		<b>Course Code: 22ECEE411</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Polymers and Sustainability:</b> Definition, classification, and structure of polymers, Polymerisation mechanisms (condensation, addition), Relationship between polymer structure and properties (mechanical, thermal, electrical), Importance of polymers in various applications (plastics, fibres, coatings), sustainability in polymer science (bio-based polymers, biodegradability, recycling), Life Cycle Assessment (LCA) for evaluating the environmental impact of polymers.		
		<b>4 hours</b>
<b>Chapter 2: Polymer Characterisation Techniques:</b> Molecular weight determination methods (GPC, light scattering), Thermal characterisation techniques (DSC, TGA), Spectroscopic techniques for polymer analysis (FTIR, NMR), Mechanical testing methods for polymers (tensile testing, rheometry), Introduction to surface and morphological characterisation techniques.		
		<b>12 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Polymer Processing Techniques :</b> Polymer melt extrusion and its applications (films, fibres), Injection moulding and blow moulding for plastic parts, Solution processing and casting techniques, Polymer blends and composites (reinforcement), Sustainability considerations in polymer processing (energy efficiency, waste minimisation).		
		<b>8 hours</b>
<b>Chapter 4: Functional Polymers and Emerging Applications :</b> Conducting polymers and their applications (electronics), Biodegradable polymers and their medical applications, Polymer hydrogels and their use in drug delivery, Polymer membranes for separation processes (Filtration, desalination), Sustainable advancements in functional polymer development.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Design Projects :</b> Analysis of real-world case studies on successful applications of polymers in various industries. Design project: Students will design a polymer-based product for a specific application, considering both technical and sustainability aspects (e.g., biocompatible materials for medical devices, recyclable packaging materials). Life Cycle Analysis of the Designed Polymer Product.		
		<b>8 hours</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: VII</b>
<b>Course Title: Senior Design Project</b>		<b>Course Code: 22ECEW401</b>
<b>L-T-P: 0-0-6</b>	<b>Credits: 6</b>	<b>Contact Hours: 6 Hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<p><b>About the Course:</b></p> <p>The Senior Design project course employs a user experience design (UX) approach to solve complex engineering problems. In this course, students are challenged to solve complex engineering problems at the frontier of smart manufacturing, green engineering, design engineering, and advanced materials. The objective of the course is to instil lifelong qualities in students, such as research, design thinking, innovation, and entrepreneurial qualities. Upon completing this course, students will be able to convert customer pain points into effective business solutions.</p>

### Curriculum Content - Course wise (Semester – 8)

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Internship – Training</b>		<b>Course Code: 22ECEI401</b>
<b>L-T-P: 0-0-6</b>	<b>Credits: 6</b>	<b>Contact Hours: ---</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours:</b>	<b>Examination Duration: 3 Hrs</b>	
<p>Internships are educational and career development opportunities that provide practical experience in a field or discipline. They are structured, short-term, supervised placements often focused on particular tasks or projects with defined timelines.</p> <p>An internship may be compensated, non-compensated, or partially paid. The internship must be both meaningful and mutually beneficial to the intern and the organisation. The objectives and the activities of the internship program must be clearly defined and understood. The following are the intended objectives of internship training:</p> <ul style="list-style-type: none"> <li>• Will expose Technical students to the industrial environment, which cannot be simulated in the classroom and hence create competent professionals for the industry.</li> <li>• Provide opportunities to learn, understand, and sharpen the real-time technical/managerial skills required for the job.</li> <li>• Exposure to the current technological developments relevant to the subject area of training.</li> <li>• Experience gained from the 'Industrial Internship' will be applied in classroom discussions.</li> <li>• Create conditions conducive to the pursuit of knowledge and its practical application in the workplace.</li> </ul>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Internship - Project</b>		<b>Course Code: 22ECEW403</b>
<b>L-T-P: 0-0-11</b>	<b>Credits: 11</b>	<b>Contact Hours: ---</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
	<b>Examination Duration: 3 Hrs</b>	
<p>An internship is an experiential academic experience in which a student has intentional learning goals/objectives with measurable outcomes. These learning goals/objectives may include:</p> <ul style="list-style-type: none"> <li>• <i>Academic Learning:</i> The student may apply and test knowledge learned in the classroom to a professional work environment.</li> <li>• <i>Career Development:</i> The student may explore a specific field of interest, expand their professional network, and gain an understanding of the qualifications and duties involved in a particular profession or career field.</li> <li>• <i>Skill Development:</i> The student gains an understanding of the transferable skills and knowledge required for success in a professional work environment and integrates those skills into their academic learning.</li> <li>• <i>Personal Development:</i> The student gains decision-making skills, self-confidence, business acumen, ethics, and teamwork skills required for success in a professional work environment.</li> </ul> <p>An internship is designed as an exchange. The student agrees to complete work that will benefit the host organisation, and in return, is offered the opportunity to learn new skills, expand their knowledge of a particular field, and explore career options. Employers offer internships for many reasons. They view student interns as valuable and cost-effective resources that enable them to accomplish projects that would otherwise be impossible. They believe that interns bring enthusiasm and new ideas into work settings and help develop strong employees. Just as importantly, employers feel an increasing commitment to education and want to help train students to assume responsible roles in society.</p>		

[Back to Semester – VIII](#)

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Capstone Project</b>		<b>Course Code: 22ECEW402</b>
<b>L-T-P: 0-0-11</b>	<b>Credits: 11</b>	<b>Contact Hours: 22 hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
	<b>Examination Duration: 3 Hrs</b>	

An academic capstone project is a comprehensive project that culminates a student's academic and intellectual experience. Most commonly, capstone projects are undertaken during the final year of school or at the conclusion of an academic program.

The purpose of this project is to prepare students for future career challenges. Even the topics students are assigned (or choose for themselves) are designed to help them analyse real-life problems and come up with suitable solutions, thus contributing to their wisdom, knowledge, and problem-solving abilities. In the process of researching a solution to the problem students intend to solve for their capstone project, students will also gain insight into the latest trends in their field.

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Fuels, Furnaces and Refractories</b>		<b>Course Code: 22ECEE421</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours: 3 Hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks:100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Fuels and Types:</b> Definition of Fuel, Types of Fuel, Conventional and Non-conventional Fuel. Types of Energy Resources: Potential of Energy Resources and Their Exploitation. Types of solid fuels. Origin and formation of coal. Classification of Coal.		
		<b>08 hours</b>
<b>Chapter 2: Furnaces and types:</b> Types of furnaces and their classification, industrial applications of furnaces, and design and construction aspects of furnaces. Chimney design, process efficiency.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Refractories:</b> Refractories: refractory material and characterisation, types of Refractories and their application in boilers and furnace construction. Properties and testing methods of Refractories. Manufacture of fire basic bricks, acidic and neutral Refractories, refractory mortars, cements and monoliths, special refractory and ceramics. Role of refractories in energy conservation.		
		<b>08 hours</b>
<b>Chapter 4: Synthetically Prepared Materials:</b> Importance of synthetic ceramic raw materials. Methods of powder preparation. General idea of technique of powder preparation: Sol gel, Co-precipitation, solvent vaporisation. Preparation, composition, characterisation and uses of Sinter Al <sub>2</sub> O <sub>3</sub> powders (prepared from different routes), Fused Al <sub>2</sub> O <sub>3</sub> , Mullite, Mag- Al Spinel, ZrO <sub>2</sub> , TiO <sub>2</sub> , Ba-titanate, ferrite, fumed silica, silicic acid sol, silica gel. Other synthetic materials: Sea water magnesia, Blast furnace slag, fly ash, red mud, Rice husk ash, electrolytes, etc. Synthetic abrasives: General ideas about their properties and uses.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Material Characterisation:</b> Characterisation and specification of ceramic materials, Including Chemical and Phase compositions, Particle size and shape, Density, pore structure, and specific surface area.		
		<b>05 hours</b>
<b>Particle mechanics and rheology:</b> Particle packing characteristics – Models of one and two spherical balls. Gap grading, continuous grading. Rheological behaviour of slurries and pastes: Newtonian fluid, plastic flow, dilatant liquid, thixotropic, Deflocculating, Zeta potential, effect of electrolytes on Zeta potentials, applications in ceramic processing.		
		<b>05 hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Fuel, Furnaces and Refractories by J. D. Gilchrist, 2<sup>nd</sup> Edition, Pergamon Press, 1977.</li> <li>2. Introduction to the Principles of Ceramic Processing by James S. Reed, Wiley-Blackwell, 1988.</li> <li>3. Materials Characterisation: Introduction to Microscopic and Spectroscopic Methods by Prof. Yang Leng, 1<sup>st</sup> Edition, Wiley, 2013.</li> <li>4. Elements of Fuels, Furnaces and Refractories by O. P. Gupta, Khanna Publishers, 1999.</li> </ol>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Nano Materials &amp; Applications</b>		<b>Course Code: 22ECEE422</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3 Hrs/week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Fundamentals of Nanomaterials :</b> Introduction to nanoscience and nanotechnology: size dependence, unique properties (electrical, optical, mechanical), classification of nanomaterials (fullerenes, nanotubes, nanoparticles, quantum dots), Characterisation techniques for nanomaterials (XRD, SEM, TEM), Sustainability considerations in nanomaterial design and synthesis.		
		<b>8 hours</b>
<b>Chapter 2: Synthesis of Nanomaterials :</b> Top-down and bottom-up approaches for nanomaterial synthesis, Chemical vapour deposition (CVD) techniques, Sol-gel processing for nanoparticle synthesis, Biological and green synthesis methods for nanomaterials, Life cycle assessment (LCA) of nanomaterial synthesis processes.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Applications of Nanomaterials in Chemical Engineering :</b> Catalysis: design of nanocatalysts for efficient and selective reactions, Drug delivery and bioengineering applications of nanomaterials, Energy applications: solar cells, batteries, fuel cells using nanomaterials, Water treatment and pollution remediation using nanomaterials, Sustainable applications of nanomaterials in chemical processes.		
		<b>8 hours</b>
<b>Chapter 4: Environmental, Health, and Safety (EHS) Considerations :</b> Potential environmental and health risks associated with nanomaterials, characterisation of nanoparticle toxicity and exposure assessment, Environmental regulations and safe handling practices for nanomaterials, Sustainable life cycle management of nanomaterials.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Design Project :</b> Analysis of real-world case studies of nanomaterial applications in chemical engineering, Student-led design project: design a sustainable process utilising nanomaterials to address a specific engineering challenge, considering synthesis, application, and life cycle impact.		
		<b>8 hours</b>
<b>Text Books</b> <ol style="list-style-type: none"> <li>1. Introduction to Nanoscience and Nanotechnology by K. K. Chattopadhyay and Arghya Narayan Banerjee, PHI Learning, 2009.</li> <li>2. Nanoscience and Nanotechnology: Fundamentals to Frontiers by Shubra Singh and M. S. Ramachandra Rao, Wiley Publishers, 2013.</li> </ol>		
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>1. Feynman Lectures on Physics Vol. 3: Quantum Mechanics by Richard P. Feynman, Robert B. Leighton, and Matthew L. Sands, Addison-Wesley, 1965</li> </ol>		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: AI &amp; ML for Chemical Engineers</b>		<b>Course Code: 22ECEE423</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3 Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to AI and ML :</b> Fundamentals of artificial intelligence and machine learning, Types of machine learning (supervised, unsupervised, reinforcement learning), Applications of AI and ML in chemical engineering (process optimisation, control, materials science), Potential impacts of AI/ML in the chemical industry.		
		<b>8 hours</b>
<b>Chapter 2: Machine Learning Fundamentals and Tools :</b> Data acquisition and preprocessing for machine learning, Feature engineering and selection techniques, Introduction to machine learning algorithms (linear regression, decision trees, neural networks), Introduction to Python programming and machine learning libraries (Scikit-learn, Tensor Flow).		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Applications in Process Engineering :</b> Machine learning for process modelling and prediction, AI-powered process optimisation and control strategies, Machine learning for anomaly detection and fault diagnosis, Case studies of AI/ML applications in specific chemical engineering processes (e.g., reaction engineering, distillation), Integration of AI/ML models into process simulation software.		
		<b>8 hours</b>
<b>Chapter 4: Sustainability and Ethical Considerations :</b> Utilising AI/ML for sustainable process design and energy efficiency, Life Cycle Assessment (LCA) with machine learning for environmental impact evaluation, Explainability and bias in machine learning models, Ethical considerations and responsible use of AI/ML in chemical engineering.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Project and Case Studies :</b> Student-led project: apply machine learning techniques to a real-world chemical engineering problem (e.g., process optimisation, data analysis), Analysis of case studies showcasing the successful implementation of AI/ML in sustainable chemical engineering practices.		
		<b>8 hours</b>
<b>Text Books</b>		
1. Chemical Process Engineering with Chemometrics: A Practical Guide by Daniel Marquardt		
<b>Reference Books:</b>		
1. Machine Learning for Chemical Engineers: With Chemometrics Applications by Jorge Ancheyta and Carlos M. Górecki, CRC Press, 2020 (2 <sup>nd</sup> edition).		
2. Hands-On Machine Learning with Scikit-Learn, Keras & TensorFlow by Aurélien Géron, O'Reilly Media, 2 <sup>nd</sup> edition, 2019.		
3. Introduction to Chemical Engineering Computing by Bruce A. Finlayson, Wiley-Interscience, 2 <sup>nd</sup> Edition, 2014.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Environmental Impact Assessment</b>		<b>Course Code: 22ECE424</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to EIA, Indian Regulations and Sustainability :</b> Definition, Objectives, Types – Rapid and Comprehensive EIA, EIS, FONSI, Step-by-step procedure for conducting EIA, Limitations of EIA, Prevention of Significant Deterioration (PSD) Programme. Carrying capacity concept and baseline evaluation.		
		<b>8 hours</b>
<b>Chapter 2: EIA Methodology and Scoping :</b> Stages of the EIA process (screening, scoping, impact assessment, mitigation, and monitoring). The scoping process involves identifying key environmental issues and stakeholders. Public participation and stakeholder engagement in EIA are also important considerations. Additionally, Data collection and analysis methods for EIA are crucial.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Impact Assessment of Chemical Processes :</b> Identifying potential environmental impacts of chemical processes (air emissions, water pollution, waste generation), Assessment methodologies for air, water, and soil impacts, Risk assessment and mitigation strategies for environmental hazards, Sustainable design considerations for minimising environmental impacts.		
		<b>8 hours</b>
<b>Chapter 4: EIA Report Preparation and Review :</b> Content and structure of an EIA report, Effective communication of environmental impacts in EIA reports, Review process and decision-making based on EIA findings, Content and structure of an EIA report as per Indian EIA Notification Guidelines, Effective communication of environmental impacts in EIA reports for Indian audiences, Review process for EIA reports by SEIAA and State Pollution Control Boards, Case studies of EIA approvals and rejections in Indian chemical industries.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Project :</b> Analysis of real-world case studies of EIAs for chemical engineering projects, Student-led project: conduct a simplified EIA for a hypothetical chemical process, considering impact assessment, mitigation strategies, and sustainability aspects.		
		<b>8 hours</b>
<b>Text Books</b>		
1. Environmental Impact Assessment for Dummies by John Glasson, Julian Godfrey, and Karen Chadwick; Routledge, 2019.		
<b>Reference Books:</b>		
1. Industrial Ecology: Parasites or Symbionts? by T. E. Graedel and B. R. Allenby, Prentice Hall, 2003 (Reprint of 1995 edition).		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Corrosion Engineering</b>		<b>Course Code: 22ECE425</b>
<b>L-T-P:3-0-0</b>	<b>Credits: 3</b>	<b>Contact Hours: 3Hrs / week</b>
<b>ISA Marks: 50</b>	<b>ESA Marks: 50</b>	<b>Total Marks: 100</b>
<b>Teaching Hours: 40</b>	<b>Examination Duration: 3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Fundamentals of Corrosion :</b> Introduction to corrosion and its types (electrochemical, galvanic, stress corrosion cracking), Thermodynamics and kinetics of corrosion processes, Factors influencing corrosion rates (material properties, environment, temperature), Sustainability considerations of corrosion and its economic impact.		
		<b>8 hours</b>
<b>Chapter 2: Corrosion Mechanisms and Material Selection :</b> Understanding different corrosion mechanisms (uniform, pitting, crevice), Corrosion behaviour of various engineering materials (metals, polymers, ceramics), selection of corrosion-resistant materials for specific chemical environments, Life cycle assessment (LCA) of materials and their corrosion resistance.		
		<b>8 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Corrosion Control Strategies :</b> Cathodic and anodic protection for corrosion mitigation, Protective coatings and linings for equipment, Corrosion inhibitors and their selection, Design considerations for minimising corrosion risks (e.g., avoiding stagnant areas, minimising stress), Sustainable corrosion control methods (e.g., bio-based inhibitors).		
		<b>8 hours</b>
<b>Chapter 4: Corrosion Monitoring and Inspection:</b> Techniques for corrosion monitoring (visual inspection, electrochemical methods), Non-destructive testing (NDT) methods for corrosion detection, Failure analysis of corroded components, Life prediction and maintenance strategies for corroding equipment.		
		<b>8 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Design Project :</b> Case studies of corrosion failures in the chemical process industry, Student-led design project: propose a solution for a corrosion problem in a specific chemical process, considering material selection, corrosion control strategies, and sustainability aspects.		
		<b>8 hours</b>
<b>Text Books</b> 1. Uhlig's Corrosion Handbook, 3 <sup>rd</sup> Edition, edited by R. Winston Revie, published by Wiley, 2011		
<b>Reference Books:</b> 1. Corrosion Engineering: Principles, Forms and Protection by N. Ranganathan, Ane Books Pvt Ltd, 2023. 2. Materials Science and Engineering: An Introduction by William D. Callister Jr. and David G. Rethwisch, John Wiley & Sons, 10 <sup>th</sup> Edition (2014). 3. Handbook of Corrosion Engineering, edited by Pierre Roberge, McGraw-Hill (2000). 4. Metals Handbook, Volume 13: Corrosion, edited by ASM International, 9 <sup>th</sup> Edition (1987) 5. Green Corrosion Inhibitors: Principles and Practices, edited by Xiangxiang Liu et al. (Springer, 2022).		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Green Technology</b>		<b>Course Code: 22ECE0401</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Green Technologies:</b> Definition and principles of green chemistry and engineering, sustainability and the twelve principles of green chemistry, Environmental impact assessment (EIA), Life cycle assessment (LCA), Green metrics (atom economy, E-factor).		
		<b>07 hours</b>
<b>Chapter 2: Green Chemical Processes:</b> Design for prevention: waste minimisation and pollution control, Green reaction design: alternative solvents, catalysts, and reaction conditions, Biocatalysis and enzymatic processes, Supercritical fluids and microwave-assisted reactions, Solvent-free reactions and green separations.		
		<b>08 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Sustainable Energy Technologies:</b> Renewable energy sources: solar, wind, biomass, geothermal, tidal, ocean and hydropower. Energy storage technologies: batteries, fuel cells, and hydrogen storage. Biofuels and their production. Energy efficiency in chemical processes. Carbon capture and sequestration (CCS).		
		<b>07 hours</b>
<b>Chapter 4: Green Material Science and Engineering:</b> Design for sustainability: life cycle analysis of materials, Biodegradable and compostable materials, Green polymers and composites, Nanotechnology for Environmental Remediation, Life cycle assessment (LCA) of materials.		
		<b>08 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Green Engineering Practices:</b> Cleaner production methodologies, Industrial waste minimisation and treatment, Green supply chain management, Life cycle design and eco-design, Environmental regulations and green certification programs.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Solar Energy Utilisation, G.D. Rai, 4 <sup>th</sup> Edn., Khanna Publications, 2006.		
<b>Reference Books:</b>		
1. Introduction to Green Chemistry, 3rd Edition by John Andraos and Albert Matlack, CRC Press (Taylor & Francis), 2014.		
2. Green Chemistry: Theory and Practice by Paul T. Anastas and John C. Warner, Oxford University Press, 1998.		
3. Sustainable Design: The Science of Sustainability and Green Engineering by Daniel A. Vallero and Chris Brasier, John Wiley & Sons, Inc., 2008.		
4. Industrial Green Chemistry: Atom Economy and the Design of Chemical Syntheses by Robert M. Anastas and John C. Warner, Oxford University Press, 1998.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Process Air Pollution &amp; Control</b>		<b>Course Code: 22ECE0402</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction:</b> Definition of Air Pollution, sources, characterisation and classification of atmospheric pollutants, air pollution episodes. Effects of air pollutants on human health, vegetation, animals, materials and monuments. Composition and structure of the atmosphere, Visibility and other related atmospheric characteristics.		
		<b>07 Hours</b>
<b>Chapter 2: Meteorology</b> Wind circulation, solar radiation, lapse rates, atmospheric stability conditions, Maximum Mixing Depth, Temperature Inversions, plume behaviour, wind rose diagram, general characteristics of stack emissions, heat island effect.		
		<b>08 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Monitoring of particulate matter</b> Respirable, non-respirable and nano-particulate matter. Monitoring of gaseous pollutants – CO, CO <sub>2</sub> , Hydrocarbons, SO <sub>x</sub> and NO <sub>x</sub> , photochemical oxidants. Monitoring equipment and sampling devices include stack sampling (Isokinetic sampling), air samplers, and a gas exhaust analyser. Air Pollution Index.		
		<b>08 hours</b>
<b>Chapter 4: Pollutant dispersion models</b> Point, line and areal sources models. Box model, Gaussian plume dispersion model – for point source (with and without reflection), Gaussian dispersion coefficient, Determination of ground level concentrations. Infinite line source Gaussian model. Plume rise and effective stack height calculations.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Air Pollution Control Equipment:</b> Mechanisms, Control equipment for particulate matter – gravity settling chambers, centrifugal collectors, wet collectors, scrubbers, fabric filters, electrostatic precipitator (ESP) - Control Equipment for gaseous pollutants – adsorption, absorption, condensation and combustion.		
		<b>10 hours</b>
<b>Text Books</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Environmental Protection and Management</b>		<b>Course Code: 22ECE0403</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to Environmental Protection and Sustainability:</b> Environmental challenges and their impact on society (climate change, air and water pollution, resource depletion), Principles of sustainability: environmental, economic, and social dimensions, Role of chemical engineers in environmental protection.		
		<b>08 hours</b>
<b>Chapter 2: Environmental Regulations and Management Systems:</b> Major environmental regulations (e.g., the Clean Air Act, the Clean Water Act), Environmental impact assessment (EIA) and permitting processes, Environmental management systems (EMS) based on ISO 14001 standards, the Pollution prevention (P2) hierarchy, and waste minimisation strategies.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Sustainable Process Design and Engineering:</b> Design for inherent safety principles for minimising environmental impact, Green chemistry principles for reducing pollution in chemical processes, Cleaner production techniques and process optimisation for sustainability, Energy efficiency in chemical processes, Carbon capture, utilisation, and storage (CCUS) technologies.		
		<b>08 hours</b>
<b>Chapter 4: Environmental Treatment Technologies:</b> Wastewater treatment: biological, physical, and chemical methods. Air pollution control technologies. Solid waste management: recycling, composting, landfills, and waste-to-energy technologies. Remediation of contaminated sites (soil and groundwater). Emerging technologies for environmental protection.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Case Studies and Sustainability Project:</b> Analysis of real-world case studies of environmental challenges in the chemical industry, Student-led project: design a sustainable solution for an environmental problem, considering technical feasibility, economic viability, and environmental impact.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Environmental Management in the Chemical Industry (edited by the Institution of Chemical Engineers, IChemE/Wiley)		
<b>Reference Books:</b>		
1. Introduction to Environmental Engineering and Science by Gilbert M. Masters and Wendell P. Ela, Prentice Hall, 3 <sup>rd</sup> Edition, 2007. 2. Sustainability in the Process Industries: Strategies for Energy Efficiency, Pollution Reduction, and Resource Conservation by Frank P. Robinson, Elsevier, 2008. 3. Industrial Ecology: Parasites or Symbionts? by T. E. Graedel and B. R. Allenby, Prentice Hall, 2003 (original 1995). 4. Environmental Life Cycle Assessment by Olivier Jolliet et al., CRC Press, 1st edition, 2016 5. Green Engineering: A Practical Approach to Reducing Pollution by David T. Allen and David R. Shonnard, Prentice Hall, 2003.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Solid Waste Management</b>		<b>Course Code: 22ECE0404</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>1. Chapter 1: Introduction:</b> Sources and engineering classification, characterisation, generation, and quantification; Objectives, principles, and functional elements of a solid waste management system – Regulatory aspects of solid waste management, major problems. Environmental implications of open dumping, Construction debris management and handling, e-waste management, Rag pickers, and their role.		
		<b>08 hours</b>
<b>2. Chapter 2: Waste Generation:</b> Rate of generation, frequency, storage, and refuse collection; physical and chemical composition; quantity of waste; engineering properties of waste; prediction and modelling concepts. Collection services, Segregation, and Transport: handling and segregation of waste at the source, collection (primary & secondary) and storage of municipal solid waste, collection equipment, transfer stations, collection route optimisation, and economics, regional concepts.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>3. Chapter 3: Waste Minimization:</b> 4R: reduce, recover, recycle and reuse, case study, guidelines.		
		<b>05 hours</b>
<b>4. Chapter 4: Processing Techniques:</b> Refuse processing technologies. Mechanical and thermal volume reduction. Biological and chemical techniques for energy and other resource recovery: composting, vermicomposting, and Digestion. Incineration of solid wastes.		
		<b>10 hours</b>
<b>Unit III</b>		
<b>5. Chapter 5: Disposal Methods:</b> Factors affecting disposal methods, open dumping and ocean dumping. Sanitary land filling - Site investigation and selection, Types, geotechnical considerations, design criteria, and design. Liners include earthen, geosynthetic, and geotextile materials.		
<b>6. Chapter 6: Operational Aspects of MSW Landfills</b> Daily cover, leachate disposal, Groundwater monitoring, leachate and gas collection systems – Design, leachate treatment. Landfill Final Cap Design and Water Balance, Modelling (HELP – Hydraulic Evaluation of Landfill Performance), post-closure environmental monitoring; landfill remediation.		
		<b>10 hours</b>
<b>Text Books</b>		
1. Integrated Solid Waste Management: Engineering Principles and Management Issues by George Tchobanoglous, Hilary Theisen, and Samuel A. Vigil, McGraw-Hill, 2 <sup>nd</sup> illustrated edition, January 1993		
<b>Reference Books:</b>		
1. Biological Waste Treatment by Metcalf & Eddy Inc., <i>Wastewater Engineering: Treatment and Reuse</i> by Metcalf & Eddy, Inc., 5 <sup>th</sup> edition, McGraw-Hill, 2002 2. Waste Management for the Chemical Industry by William E. Franklin 3. Introduction to Materials for Environmental Engineering by Albuquerque et al. 4. Handbook of Thermal Desorption by Theodore Vermeulen et al.		

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Occupational Safety and Health Administration</b>		<b>Course Code: 22ECE0405</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Introduction to OSHA:</b> Introduction – concept and scope of occupational safety and environmental health, basic requirements for a healthy environment and environmental quality, human exposure and impact of environmental factors on health. Occupational Safety and Health Administration - Laws governing OSHA and Right to Know, National Safety Law, types of diseases and their spread, Health Emergencies.		
		<b>08 hours</b>
<b>Chapter 2: Environmental Regulations and Management Systems:</b> Ergonomics at the workplace - Preventing ergonomic hazards, Ergonomic task analysis, Ergonomic standards, and Ergonomic programs. Occupational hazard and control – Hazard analysis, Human error and fault tree analysis, Emergency response, Principles of Safety.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Fire prevention and protection:</b> Fire prevention and protection – fire triangle, fire development and its severity, effect of enclosures, early detection of fire, classification of fire and fire extinguishers. Electrical safety, Product safety, safe handling of chemicals, and safety procedures for nuclear installations.		
		<b>08 hours</b>
<b>Chapter 4: Accident causation and investigation–</b> causation, investigation, methods of acquiring accident facts, supervisory role in accident investigation.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Personal Protective Equipment:</b> Types of Personal Protective Equipment and their advantages, effects of exposure and treatment in engineering industries, and municipal solid waste. Environment management plans (EMP) for safety and sustainability.		
		<b>05 hours</b>
<b>Chapter 6: Occupational health and safety considerations:</b> Water and wastewater treatment plants, handling of chemicals, and safety measures in water and wastewater treatment plants and laboratories, as well as Construction material manufacturing industries such as cement plants, RMC plants, precast plants, and construction sites. Policies, roles and responsibilities of workers, managers and supervisors Performance), post-closure environmental monitoring, landfill remediation.		
		<b>05 hours</b>

<b>Program: Bachelor of Engineering</b>		<b>Semester: VIII</b>
<b>Course Title: Nano Science and Technology</b>		<b>Course Code: 22ECE0406</b>
<b>L-T-P:3-0-0</b>	<b>Credits:3</b>	<b>Contact Hours:3Hrs/week</b>
<b>ISA Marks:50</b>	<b>ESA Marks:50</b>	<b>Total Marks:100</b>
<b>Teaching Hours:40</b>	<b>Examination Duration:3 Hrs</b>	
<b>Unit I</b>		
<b>Chapter 1: Basics of Nanoscience:</b> Definition and historical background, nanoscience vs. nanotechnology, Nanoscale materials and their unique properties, Applications in various engineering disciplines: civil, mechanical, electrical, electronics, computer science, artificial intelligence, and biomedical engineering.		
		<b>08 hours</b>
<b>Chapter 2: Synthesis and Characterisation of Nanomaterials:</b> Top-down and bottom-up approaches, Physical, chemical, and biological methods, Characterisation techniques: SEM, TEM, AFM, XRD, and spectroscopy.		
		<b>07 hours</b>
<b>Unit II</b>		
<b>Chapter 3: Types of Nanomaterials:</b> <b>Carbon-based nanomaterials:</b> Classification, metal and organic, vesicle, Properties and classification.		
		<b>08 hours</b>
<b>Chapter 4: Nanotechnology in Engineering Fields</b> Civil Engineering: Nanomaterials in concrete, coatings, and structural health monitoring; Mechanical Engineering: Nanotribology, nanofluids, and nanoscale mechanical systems; Electrical and Electronics Engineering: Nanoelectronics, nanosensors, and flexible electronics; Computer Science and AI: Quantum computing, nanorobotics, and data storage; Biomedical Engineering: Drug delivery, imaging, tissue engineering, and diagnostics.		
		<b>07 hours</b>
<b>Unit III</b>		
<b>Chapter 5: Environmental Impact:</b> Types of Personal Protective Equipment and their advantages, effects of exposure and treatment in engineering industries, and municipal solid waste. Environment management plans (EMP) for safety and sustainability.		
		<b>05 hours</b>
<b>Environmental Health and Safety:</b> Toxicology of nanomaterials, Safety protocols for handling nanomaterials, Regulatory guidelines and ethical considerations, Impact of NM on health.		
		<b>05 hours</b>
<b>Textbook</b>
